

Rapid Assessment

What is the Rapid Assessment?

Rapid Assessment is a Microsoft-funded assessment that is utilised to assess your customers' on-premises environments and is carried out by the Infinigate Cloud PRO team. This assessment is part of the Azure Migrate and Modernise (AMM) program which helps simplify and accelerate customer migration and modernisation projects.

The Infinigate Cloud PRO team will use the Azure Migrate software agent and follow the Microsoft Cloud Adoption Framework (CAF) and Well-Architected Framework (WAF) to deliver this service.

What does Rapid Assessment do?

This service will deliver an unbranded report to our partners for rebranding, based on the customer's current on-premises (or non-Microsoft cloud) environment, and it will provide insight on Azure "readiness" including the required VM sizes, licensing requirements, any end-of-support scenario and other information around how these customers' workloads can be migrated into Azure and the associated costs. This is relevant for migrating various workloads including Windows/Linux and SQL on physical instances, VMware VMs, and Hyper-V VMs to Azure, and for migrating applications to Azure App Service.

About this service

Project size

The estimated project size of the migration should be >\$25K planned annual Azure consumption. This is typically for environments with 12 or more virtual machines.

Inclusions

The report will also cover analysis of SQL Server services, Backup and Disaster Recovery services.

Financial analysis

The assessment will detail Total Cost of Ownership (TCO) for on-premises costs vs moving to Azure, payback period, etc.

Engagement

Typically 20-30 days (based on appliance setup, one week assessment & report creation)

Funding

Microsoft fund the Infinigate Cloud PRO team to deliver this work, so you or your customer will not be charged.

Key Features

Move their on-premises SQL/Windows server deployments into the cloud

Deploy an Azure Virtual Desktop environment

Avoid issues with end-of-support e.g. Windows/SQL 2012

Develop a Proof-of-Concept in Azure for a complex deployment

If you're interested in this PRO service and unlocking all the opportunities that the AMM Program has to offer, contact Infinigate Cloud Azure Solutions Lead, [Darren Roberts](#) or your Account Manager to discuss.
