

Mimecast Tenant Review

Overview

Review the current configuration of a Mimecast tenant and seek out any vulnerabilities with the Mimecast Tenant Review service.

What does the service do?

This service provides a review of the current configuration of a Mimecast tenant within a business, against the recommended configuration. Companies will also be provided with recommendations on how to improve and further secure their Mimecast experience.

Review of existing Gateway Policies within Mimecast

Review of existing Targeted Threat Protection services

Review of existing security configuration within Mimecast

Recommendations on how to improve the configuration against suggested Best Practises

Production of a review document to cover the recommendations made

Who is this service for?

For companies who currently have Mimecast Secure Email Gateway services and would like to review the configuration, with the view to update based on recommendations made via this service.

About the service?

The service will include the production of a report on the current Mimecast configuration within the company and compared against our recommendations.

A call will be arranged to go through the findings of the report and suggestions of how to approach making the improvements detailed.
