ABSTRACT

This is designed as an alternative “method of treatment” to incorporate all forms of particle physics using the particle model called particle progression and cellular biology as a quantum structure in a process of reverse engineering mitosis to produce a highly effective treatment and alternative to chemotherapy and hyperbaric for cancer and other forms of cellular degeneration as well as promote viable solutions for other conditions presented such as cellular fatigue, weakened immune health.

KEYWORDS: Cancer, Mitosis, Treatment, Cellular Fatigue, Hyperbaric.

MATERIALS

Ozonator is used as a method to produce high levels of Oxygen and is present in commercial and non-commercial use.

Perfluorocarbon is used in liquid breathing in most general respiratory surgeries.

Hot-Tub is in general use to contain the liquid and provide an environment for which an individual may rest.

Earth Battery in this article is detailed as a ground

generator of electricity which biodegraded compost provides, made by M. Emme in 1893 No. 495,582.

METHOD

The Lazarus Pit is designed to be used in conjunction with a mineral, vitamin and antioxidant smoothie to promote effective conditions for immune health while providing proper particle and energy transfer.

We begin with the base of a hot-tub, this hot-tub, uses fluid capable of holding extreme amounts of oxygen as seen in "Liquid Breathing".

Fig. 1.

This fluid is used inside of the hot-tub and proliferated by using oxygenators often referred to as Ozonator. This will create micro bubbles of oxygen increasing and maximizing the oxygen levels in the fluid present in the hot tub for absorption. If you cannot obtain the carbon

molecule it is permitted to use alkaline water, do not use the hot tub chemicals this will deter the cleansing process as they are absorbed by the body, instead drain every few days and wash the container with dawn soap. Then refill.

Fig. 2.

This will be connected to a compost of decaying materials such as vegetation, the vegetation will decay and be connected to channel the decayed energy into the fluid we will call the earth battery. This will provide the body with ample natural energy. This decayed energy produced will give fatigued cells the ability to utilize and

absorb energy required to produce proper mitosis of the cells at a micro-biological level. This earth battery will be placed into the center of the decayed compost system. Then connected using conductive material in a protective shell to prevent unwanted displacement of energy while permitting transfer into the fluid within the hot-tub.

Fig. 3.

When combined with the high-capacity oxygenated liquid and the use of the smoothie, we provide for the body and proper conditions, particles and energy needed for proper immune and cellular mitosis.

What foods help remove conditions of cellular irregularities:

First let's understand that an increase in lactate and decrease in oxygen levels increase the irregular growths and in order to provide an optimal condition for the body to correct this we can use food intake.

Increasing probiotics for bowel health with carrot, salt and vinegar in an alkaline based water with baking soda and fruit smoothie: (lactates provide cells such as cancer an optimal environment for reproduction reducing lactate in the blood is vital)

Uses of anti-lactate plants such as: (use of vitamin E reduces collagen linking and production by reducing the break down of unsaturated fats).

Consider cardiovascular workout to open the capillaries and increased blood flow. Just enough to promote regulatory blood flow, increase body temperature.

Baking soda

1 gallon of water a day (Alkaline)

Bell peppers (Red and Yellow) Black Currant Green beans Potatoes Berries Kidney Beans Walnuts

Use of plants and fruit to provide oxygen transfer and production: (clogged lungs decrease oxygen levels in the blood) smoking and asbestos where fibers clog the lungs and prevent oxygenation.

Lemons (Reduces Lactate and Improves oxygen)

Avocado, Berries, Carrots, Ripe Bananas, Celery, Broccoli, Garlic, Dates, Alfalfa Sprouts, Apricots, Sweet Apples, Sweet Grapes, Pears, Passion Fruit, Raisins, Chicory, Asparagus, Watercress, Seaweed, Parsley, Papaya, Limes, Melons, Kiwi, Cantaloupe, Mango, Peaches, Pineapple, Oranges.

Drinking a smoothie made from these will have a tremendous homeopathic treatment which will lead to recovery and is a verified method to combat irregularities in cell growth, promote immune health and proper mitosis.

DISCUSSION

- Key factors that may cause mitosis to occur with disorder
- Dehydration: Lack of space to perform mitosis.
- Blood clots: Reduced volume of required free space for mitosis to occur.
- Lack of particles: Lack of nutrients equates to lack of particles to supply and perform. Minerals or vitamins. This lack of particles cause a deficiency in the mitosis process.

- Lack of energy: During the decomposition of food particles the decayed bio energy is transferred into the body through biodegradable process performed by the stomach and intestines. This even equates a lack of energy causing cellular fatigue which prevents proper force to be applied during mitosis.

Toxicity levels: Toxins accumulate within the body to prevent proper mitosis from occurring. These toxins reduce the ability to absorb nutrients and transfer energy as particles and when considered to be a atmospheric condition of the cell, all respective conditions become factors or determining conditions for particle and energy transfer.

Lack of oxygen: the lack of oxygen is a key promotion to irregular mitosis and prevents the regenerative abilities and lowers overall immune health.

RESULT

The result of this method will be to provide in every possible way all the particle values by reverse engineering of the mitosis process to incorporate physics and particle progression to create an ideal condition of mitosis and deter the irregular mitosis by supplying both a pristine condition with ample energy, proteins, minerals and vitamins.

One of the key factors that is provided by The Lazarus Pit, is the external source of natural energy through biodegradation which replicates the stomachs digestive process and provides vast amounts of oxygen, proteins, minerals and vitamins.

Another factor to The Lazarus Pit is oxygenation of the body to promote immune health as an alternative to hyperbaric.

CONCLUSION

Considering the introduction of particle progression as a universal method in quantum relativity and mechanics is relatively new, a deeper dive into The Lazarus Pit and it's potential use for bio regeneration as applicable from a general standpoint, research and exploration into this new and potentially useful alternative method of treatment should be conducted. It is my conclusion that this method has the potential to cure a vast majority of ailments and cancers.

ACKNOWLEDGMENT

I acknowledge the many works of Ray Peat for their details into mitosis and immune health. To Albert Einstein for the quote "Question Everything". To European Journal of Biomedical and Pharmaceutical Sciences for consideration of the article. To M. Emme for the design of the Earth Battery patent listed. To my one true love for whom is my motivation and energy to make this world a better place.
