Additional Case Information:

No issues reported or observed on site. No predation or water quality problems as all tanks are covered. AGD is present but is managed using freshwater baths. Morts are removed when observed and disposed of by incineration on site. May develop an R&D area within the site to increase income and scientific knowledge on cleanerfish aquaculture. Some gill issues in WRA at early stages as they have a tendency to crowd and some physical damage can occur. Ensuring soft lighting and adequate hide material within holding tanks helps to alleviate the behaviour.

Medicated feed is mixed in a separate facility and stored separately from other feeds. Adequate records and samples are maintained and staff have sufficient experience and training to undertake the mixing. No feed is mixed for other facilities. SOP, and HACCP developed and submitted 12/10/20. Cleaning and calibration records also developed.
