Additional Case Information:

The fishery is currently closed due to the COVID-19 pandemic. They hope to open next year. They make most of their money from selling fish to other fisheries.

The hatchery will not be used again and is in the process of being dismantled. Risk category lowered from high to medium as eggs are no longer imported from outside GB.

In the past eye fluke has been an issue on site caused by snails. The manager is currently keeping snail numbers low and eye fluke is no longer an issue.

Predator mitigation methods: 6ft fence surrounding farm and fishery, bird nets over site, rat and mink traps deployed, screens on intake and outflow pipes.

Remote inspection carried out by on 06/11/2020.

Two dead fish observed on site during the inspection. Site manager reminded to remove fish.

No site number on entries in the movement book. Site manager sent NMPi "smart link" (containing fish farm and fisheries layers) for future reference

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO FB0297 SITE NO FS0511 INSPECTOR DATE OF VISIT 11/11/2020 SITE NAME Forgue CASE NO 20200490

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009, and to meet the requirements of European Community Council Directive 2006/88/EC.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The surveillance frequency category of the site was assessed as medium. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every second year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and found to be inadequately maintained.

Records in relation to aquaculture animals transported by the business were inspected and found to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

No mortality levels exceeding the reporting criteria have been recorded since the last inspection.

No animal health surveillance had been carried out on behalf of the business and/or Marine Scotland since the last Marine Scotland Inspection.

The biosecurity measures plan for the site was not available for inspection.

The following points were raised with the site representative during the inspection:

- A movement record was available for inspection but was inadequately maintained. Each entry in the movement record should include the unique site number for the site of origin/destination. A record of this should be included for all subsequent movements onto and off the site. As part of this inspection, no further action required.
- In accordance with regulation 6(2)(b) of the Aquatic Animal Health (Scotland) Regulations 2009 the operator of the aquaculture production business (APB) must establish, maintain and comply with a biosecurity measures plan containing at least the information specified in paragraphs (a) to (f) below. The biosecurity measures plan must be made available by the operator of the APB or any staff engaged by or on behalf of that operator, upon request by an inspector.
 - a) The manner and frequency in which mortalities will be removed, recorded and safely disposed of by the APB;
 - (b) The manner and period in which the APB will notify the Scottish Minister or a veterinary professional of any increased or unexplained moralities in aquaculture animals held on each farm site;
 - (c) The actions that will be taken by the APB in the event that the presence or suspicion of the presence of any listed disease is detected and how and when that will be notified to the Scottish Ministers;
 - (d) The minimum health status of aquaculture animals to be stocked on the farm site to ensure that stocks being placed on the farm site shall only be sourced from farms of an equal or higher health status and where required certified as such;
 - (e) The husbandry and bio-security measures to be implemented between epidemiological units on the farm to ensure the transmission of disease by the movement of staff, visitors, equipment and live or dead fish is minimised;
 - (f) The measures that are in place at the farm site to maintain the physical containment of the aquaculture animals held on the farm site.

These must be addressed to ensure the conditions of authorisation for your Aquaculture Production Business (APB) are being met. Records or documentation demonstrating that these points have been addressed should be sent to the Fish Health Inspectorate (contact details below) within 30 days of the date this report was issued.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007 with respect to section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory.

Please contact myself or the duty inspector should you require any assistance or clarification in implementing any requirement or recommendation detailed in this report.
