FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

Business No FB0119 Date of Visit 26/08/2021

SITE NO FS1307 SITE NAME Wrasse Broodstock Unit

CASE NO 20210315 INSPECTOR

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Mortality records were inspected and found to be adequately maintained. No mortality levels exceeding the reporting criteria have been recorded since the last inspection.

The site was inspected on 13th July 2021 and records including those relating to farm management agreements and the biosecurity measures plan were checked. However at the time of this inspection water temperature at the site was above that required for the visual assessment of fish stocks in accordance with Aquatic Animal Health (Scotland) Regulations 2009. During this visit on 26/8/21 the water temperature had reduced and a visual inspection of fish stocks was carried out. Please refer to the case of 13th July 2021 (case 20210248) for full details.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed:

Fish Health Inspector

Date: 06/09/2021
