## FHI 059, Version 13 Additional Case Information:

The site was inspected following reports of increased mortality, due to gill health issues. While on site it was noted that mortality levels had decreased and gill health had improved. The stock on site was swimming deep and staff members were checking daily for moribund fish, although very few had been seen. This was reflected during the inspection of the site and one letheragic fish was seen and was unable to be caught for diagnostic sampling.

In response to the mortality issues the site had begun targeted harvesting of the worst affected cages and is expected to be fallow in early October.

## Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected following reports of increased mortality by the farm operator, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

#### Records

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Mortality levels had exceeded the reporting criteria since the last inspection and had been reported to the Fish Health Inspectorate as required.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.
