### **Additional Case Information:**

Four treatments using freshwater and FLS in the current cycle. Last FW and FLS treatment from 07/10/24 to 08/10/24 One treatment using Slice in April 2024

SealPro nets installed on site.

Mortality removed onto mortality removal vessel (named "Turas"). Morts ensiled onboard vessel and taken to Dundas Chemicals via road lorry. Mortality removal boat visits 4-5 sites in the area, disinfecting between sites. Some grilse observed in the cages whilst inspecting stock on site.

Site representative stated that many plankton blooms were observed over the summer when feeding was reduced to keep the fish deep in the cages, away from the plankton closer to the surface. Mortality remained low during each plankton bloom. Site staff are trained to take samples and identify plankton. Several species of plankton were observed in each bloom.

# FISH HEALTH INSPECTORATE VISIT REPORT

## SUMMARY FOR INFORMATION OF SITE OPERATOR

 BUSINESS NO
 FB0169

 SITE NO
 FS0894

 CASE NO
 20240412

DATE OF VISIT29/10/2024SITE NAMERubha StillaigINSPECTORInspector

This report replaces the report issued on 07/11/2024. The wording of the paragraph explaining the issue with the FMS has been rewritten to more accurately reflect the requirement. The deadline for addressing the issue has also been updated.

### Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

#### Records

The surveillance frequency category of the site was assessed as medium. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every second year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Mortality levels had exceeded the reporting criteria since the last inspection and had been reported to the Fish Health Inspectorate as required.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Directorate were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

# Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Samples were taken to be analysed for veterinary residues.

## Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory with regards to parasites, and containment and escapes.

The farm management statement was inspected and it was found that the site was not managed and operated in accordance with the farm management statement. It stated in the farm management statement for M-42 that "Cleaner fish will be used throughout the 23Q3 generation". Although Rubha Stillaig is stocked with 23Q3 Atlantic salmon, the site is not stocked with cleaner fish and has not been during the current cycle. Either the site must be operated in accordance with the farm management statement or the farm management statement must be updated to reflect the current practices on site to ensure compliance with the legislation.

Please ensure that this point has been addressed by **12/12/2024**. Records or documentation demonstrating that this point has been addressed should be sent to the Fish Health Inspectorate (contact details below). The site may be subject to further inspection or enforcement action should the appropriate action regarding the above points not be taken within the time period stipulated.

Please contact myself or the duty inspector should you require any assistance or clarification in implementing any requirement or recommendation detailed in this report.

Signed:

Fish Health Inspector

Date: 11/12/2024

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Scottish Government website at Fish Health Inspectorate Service Charter - gov.scot (www.gov.scot)

### **Case completion report**

Recommendations in relation to the above case were made for implementation by 12/12/2024. Following submission of the required documentation, evidence has now been provided to the Fish Health Inspectorate to demonstrate that the recommendations have been implemented.

This case will now be closed. This site may be subject to further audit and recommendations in the future.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.
