Biosecurity Records
1. Biosecurity records available for inspection?
2. Has the manner and frequency of mortality removal, recording and safe disposal been considered?
3. Has the manner and period in which the APB will notify Scottish Ministers or veterinary professional of any
increased (unexplained) mortality at the site been included?
4. Has the action that will be taken in the event that the presence or suspicion of the presence of a listed disease
is detected been included and how and when that will be notified to Scottish Ministers?
5. Has the health status of aquaculture animals being stocked on the farm site been covered (equal or higher
health status, certification if required)?
6. Have the husbandry and biosecurity measures implemented between each epidemiological unit to minimise
transmission of disease been covered (movement of staff, visitors, equipment, live or dead fish etc.)?
7. Is documentation available regarding the measures in place to maintain the physical containment of
aquaculture animals held on site?
8. Have the biosecurity procedures been adequately implemented on site?
If no, detail:
Results of Surveillance
1. Has any animal health surveillance been carried out by, or on behalf of, the business?
2. If yes, are results available for inspection?
3. Any significant results?
If yes, detail (if not detailed under recent disease problems).
Records checked between: 28/03/23 to 20/02/25

Additional Case Information:

Paperwork and inspection by accompanied by for Inspector Competency Audit. Mortality records, sea lice records, treatment records inspected remotely on 19/02/25, all remaining paperwork conducted on site on 20/02/35

Visibility was mixed during inspection with reduced visibility in pens 9 to 12 and clearer visibility in pens 2 to 8. Site consists on 3 groups of 4 steel pens, fitted with environets. Site will be swapping to 120m pens in future.

Site is to receive an input of smolts in May 25, which will be onsite until approx Dec 25, when the stock will be moved to Creag an T'Sagairt (Loch Hourn). The site will fallow and receive an input from Loch Etive in Feb 26 for ongrowing and this is the planned production cycle for site, receiving inputs from Loch Etive and ongrowing for less than a year.

3 to 4 fish observed per pen with lesions (winter sores), most were deeper in the water and still active. One fish observed hanging vertically, but unable to catch. One moribund removed and examined at shorebase. A mock diagnostic was conducted on this fish as part of inspector competency audit. The majority of stock was observed shoaling and feeding well. Harvesting operation ongoing at time of inspection, site is conducting both live and dead haul harvests.

Site has only had 1 Slice treatment and 2 thermolicer treatments this cycle

Fish sampled for VMD appeared in very good condition with no sea lice observed on fish.

Cleaner fish mortality (last 4 weeks) LUM - WK 4 - 515 (13.43%), WK 5 - 940 (28.32%), WK 6 - 830 (34.81%) and WK 7 - 734 (47.39%) WRS - WK 4 - 667 (1.54%), WK 5 - 1,036 (2.43%), WK 6 - 911 (2.19%) and WK 7 - 605 (1.49%)

DATE OF VISIT20/02/2025SITE NAMEGorstenINSPECTORInspector

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The surveillance frequency category of the site was assessed as high. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted annually. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Records in relation to aquaculture animals transported by the business were inspected and found to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Mortality levels had exceeded the reporting criteria since the last inspection and had been reported to the Fish Health Inspectorate as required.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Directorate were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Samples were taken to be analysed for veterinary residues.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory with regards to parasites, fish farm management agreements and statements and containment and escapes.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed:

Date: 20/02/25

Fish Health Inspector
