Additional Case Information:

66/80 drawers were stocked.

Site had experienced elevated mortality during week 49 2024 21522 (1.06%), this was attributed to high number of deformities.

Alevins were observed to be good condition, with no health concerns.

Site thermometer was used due to biosecurity risks. Thermometers are calibrated before every intake and checked daily with oxyguard probes. Records and procedures of calibrations were checked and found to be satisfactory.

Site records were inspected in person on 04/02/2025 by [REDACTED] whilst supervised by [REDACTED].
