Additional Case Information:

Site inspection partially completed from the boat due to the adverse weather conditions. 5 out of 12 pens were inspected by wholly walking around the units. 2 moribund fish with physical damage on the head were observed during the inspection, the farm manager thinks the damage is due to the fish hitting the hamsterwheel at the centre of the cage.

The majority of the population could be observed deep in the pens. The fish sampled for the VMD appeared healthy both externally and internally.

Thermolicer treatment 17/02/25 - 22/02/25.

Pseudomonas outbreak in Lumpfish in July - October 2024. 26,900 fish lost in total during the period. Functional feed given to the lumpfish.

Handling during sea lice treatments (site uses dewatering system to separate the fish from the salmon) also causing high mortalities in cleanerfish - 16,000 LUM and 2,500 WRA lost in 2024.

A further 9,600 LUM and 13,500 WRA were lost in 2024 due to other transport/handling events.
