

FS1

SEMI-AUTOMATIC FEED SYSTEM

PH

PHARMA

> Satisfying today's production line demands

The FS1 is a semi-automatic feed system designed for quick change-over, lower volume packaging settings where cost of change parts need to be affordable and ultra quick change-over is essential.

Operation is as simple as an operator hand filling the feeding mask and removing remaining product. An escapement opens and dispenses the product into blister cavities. The mask typically covers multiple indexes.

FEATURES AND BENEFITS

- Safe and Simple Design
- Get Up & Running with a Quick Change-Over
- Simple Installation and Operation
- Minimal Training Required
- Affordable Change Parts & Easy to Clean
- Compatible with Many Blister Machines
