

# Frontend- / Backend-Development (m/f)

Internship

## About Us

ThinXNet is a young company from Munich, living the Internet of Things vision. With our product TankTaler, we're able to connect cars with the internet in a simple and fast way. Given our system, consisting of a hardware plug and a smartphone app, customers can get mobile access to relevant on-board information of their automobiles, pay at the gas station with just one click on their smartphone (beta) – without lining up in the shop – and much more. In addition, consumers collect TankTaler automatically. Later on, these bonus points can be converted to premiums. Our long-term goal is to create a completely new mobility experience within the connected car and furthermore making vehicles smarter than ever before.

For our fast-growing, Venture Capital funded Start-Up, we're looking for highly motivated support in our Frontend- / Backend-Development team, starting in Munich from now. If you're a proactive person, who loves to inspire people and share our passion for *Internet of Things*, then you're just right at ThinXNet!

## What is my role?

- As a member of our eight-person software development team you will drive the development of smart solutions to handle huge amounts of data created by the devices in the field
- In addition and depending on your preferences you will extend our ThinXNet User Experience (for iOS, Android and web applications)

## Which qualifications do i need?

- You are studying informatics, business informatics, or a related discipline
- You already have gained first experience in Frontend- / Backendprogramming working with the Node ecosystem and/or JavaScript, native Android/iOS Apps
- An open mind willing to try out new ideas who can work independently to achieve results and at the same time build on the expert knowledge of the ThinXNet team.

## What do we offer?

- Great opportunity to gain experience in a highly dynamic start-up environment
- Attractive role as a full member in our Software-Engineering team
- Appliance of latest software technologies, i.e. node.js, mongoDB, JavaScript, Angular.js
- Possibility to apply your theoretical knowledge from university to an exciting product and depen your knowledge in software-engineering
- Collaboration in an experienced team (managed by a former Google Product Manager and the former CEO of Groupon)
- Great workplace close to Munich's hotspot Gärtnerplatz (Glockenbachviertel) and the Isar

## Ready to revolutionize the automotive industry?

Then submit your CV and a short note why and when you want to join us to [jobs@thinxnet.com](mailto:jobs@thinxnet.com). If you have any questions, feel free to give us a call or just stop by at our office. We really look forward to getting to know you!
