

INTAKA ISLAND EDUCATION ACTIVITIES

GRADE 5

FUN WITH FOOD CHAINS

Topic: Food chains, interdependence

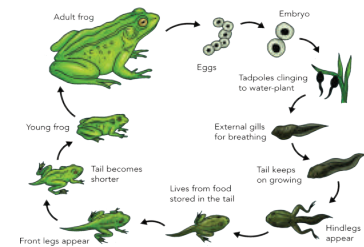

Activity: After a thorough introduction on where energy comes from, who transforms it and how it gets passed on, learners will investigate the food chains of Intaka Island. With the help of images, learners will search for all the plants and animals in their specific habitats. They will learn which are producers, herbivores, omnivores and carnivores and will then be able to build the food chains that we have on the island. Interdependence will also be discussed.

LOVELY LIFE CYCLE

Topic: Life cycles - What a life cycle is, life cycle of mammals, insects, amphibians and birds

Activity: Learners will receive a quick introduction on what life cycles are before they go out on the wetlands to search for some of the organisms that are found on Intaka Island. The life cycle of each organism will be explained to them. They will then, in groups, put together the pieces of a puzzle to complete the life cycles of various animals and plants.

SOIL SAMPLING

Topic: Different soils types

Activity: Learners will receive an introduction of what soil is, where it comes from, the make up and the importance. They will then collect samples of the different soil types that are found on Intaka Island in order to investigate all the properties of the different soil types.
