ISRAEL EXPORT INSTITUTE

Israel's Dental Industry: Crowning Innovation

The **Israeli Oral and Dental Industry** includes more than **120 manufacturing firms**. Many have reached international recognition and some have become leaders in their field. Notable acquisitions of Israeli companies took place from **AlphaBio implants** by **Nobel Biocare**, to **MIS implants** by **Dentsply Sirona**, to last year 's merge of the Israeli **Paltop Implants** to the US **Keystone Dental**, forming a global dental implant player with nearly \$50 million. Other giants like **Carestream** and **Align** also acquired Israeli companies and kept their R&D center in Israel. **Datum Dental just** joined the **Dentsply Sirona** family this February.

According to the World Economic Forum's Global Competitiveness Report 2016-2017, Israel is the 2nd most innovative country. This "start-up nation" has a vibrant dental ecosystem of whom 30% are start-up companies with solutions aiming to enhance clinical performances, reduce chair time, increase efficiency and ease of treatment for both dentists and the patients.

While the Israeli dental implant sector is the largest segment, there are also many innovations in related segment such as **Regenerative, Digital tech** assisting implant placement, special **materials** as well as solutions for **Periodontics** sector. Among the growing dental sectors in Israel you'll find **Oral Care** (15%) **Regenerative solutions** (8%) **Restoratives & Esthetics** (8%) and **Infection Control** (5%). Some of these solutions are useful in times of COVID. However, the fastest growth is in the use of **digital technologies** and accounts now for 15% from our dental sector from **AI software** that offer diagnostics & treatment planning in 3D, to **platforms that assist the workflow** between Clinics and Labs, to **intraoral scanners**, to **3D printing**, and even **tele-dentistry**. Altogether they offer more efficient processes for more value.

Israeli dental companies are looking for distributors and/or strategic partnerships to enhance their growth and some offer OEM partnership. Israeli dental products are considered value products, due to their high quality and reasonable pricing, therefore are highly competitive. **Come meet our innovative companies!**

ISRAEL EXPORT INSTITUTE

Israel Export Institute

The Israel Export & International Cooperation Institute, supported by member firms, private sector bodies and the government of Israel, advances business relationships between Israeli exporters and overseas businesses and organizations. By providing a wide range of export-oriented services to Israeli companies and complementary services to the international business community, the Institute helps build successful joint ventures, strategic alliances and trade partnerships.

The IEICI's Life science Department is the leader in business matching between the more than 1200 companies in the Israeli life science industry and worldwide business partners at all levels. It has proven ability to identify and match suitable potential business partners, organizes one-on-one business meetings, and is a focal point for contacts with the government as well as with the industry.

Raphaële Moog, Head of Oral & Dental Technologies Sector

ABraCadabra

New age implantology

ABraCadabra

www.abcimp.com

Dental Sectors:

Implantology
Periodontics
Regenerative Solutions

Product Categories:

Dental implants,
prosthetics parts
Innovative implantology
systems

ABraCadabra develops innovative solutions for dental implant surgery, based on novel biomechanical principles, design concepts, and clinical planning, saving precious chair time.

Pathfinder™ by ABraCadabra is a wisely designed cover screw, slim healing abutment and much more.

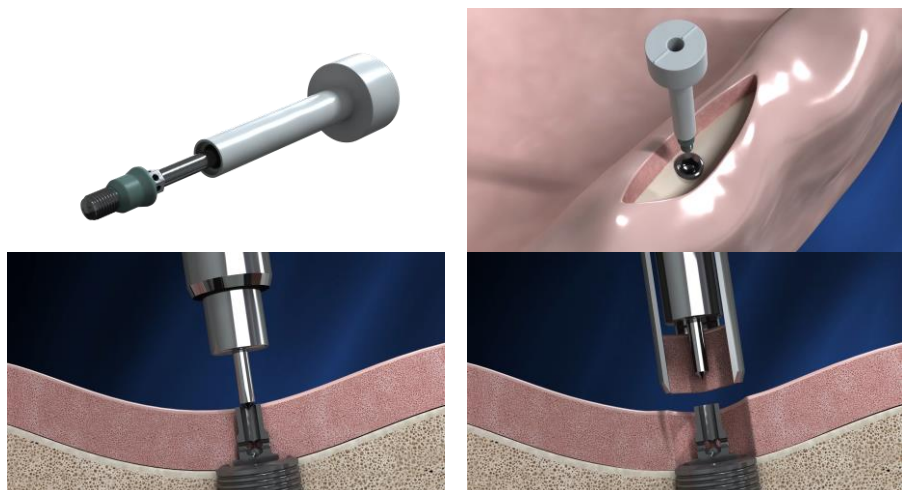

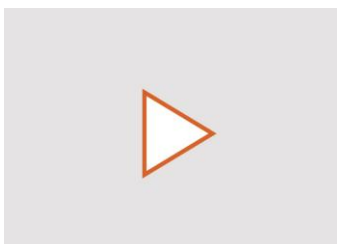

It greatly improves the speed, safety, predictability and patient satisfaction during Stage 2 implant uncovering procedures. Pathfinder is installed during implant placement. It allows easy maintenance of the soft tissue during the healing period, painless anesthetic injections and easy and precise uncovering of the implants without guessing their position and angulation. Additionally, Pathfinder allows easy fixation of gingival grafts and GTR membranes.

Pathfinder is compatible with all major implant brands.

Looking for

Implant manufacturers, distributors, DSO's and Clinics,
Oral implantologists, periodontology oral & maxillofacial surgeons, GP.

Medical Device:
OralAce Patch
OralAce Rinse

AceTech Ltd provides solutions for Wound Healing:

OralAce Patch- a unique freeze dried Acemannan gel patch for the management of all types of oral wounds, injuries and ulcers, including Alveolar Osteitis and Aphthous Stomatitis.

OralAce Rinse- Acemannan-based mouth wash that adheres to oral mucosa and forms a protective coating over painful mouth sores and irritations, i.e. for Oral Mucositis and Aphthous Stomatitis

OralApp- an innovative AI-based software tool that provides medical teams with a personalized, predictive assessment of Oral Mucositis prior to the initiation of oncology treatment.

Our competitive edge:

- Clinically proven – faster healing time
- Proprietary functional ingredient – Acemannan
- Naturally derived
- Safe track record
- Non-steroid and non-opioid
- CE and FDA approvals

Alfa-Gate Academy

Alfa Gate is providing dentists in more than 50 countries around the world with innovative solutions. This global family business is run by practicing dentists, since 1996.

Throughout our 25 years of experience, our focus has been to conform to dentists' needs, first and foremost. We create implants that you can trust, as we know the struggles of finding the right dental products for you. In addition, you can rely on us to deliver premium quality and high-performance wide range of dental products and services.

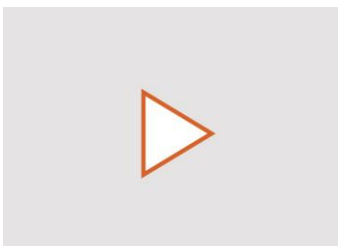

Our products include dental implants, prosthetic solutions, single and multi-unit, CAD-CAM and guided surgery , and Alfa-Gate Academy.

One of our most advanced technologies and premium implant is the Bioactive. The CaP hydrophilic surface attracts blood cells accelerating osseointegration process to 6-10 weeks and increase success rate even in most challenging cases. Moreover, we attain your needs in a wide range of prosthetics solutions.

Product Categories

Online platform &
software

Amrulo is a simple and intelligent Integrated solution used by clinics and labs to facilitate an Easy move into the Digital World.

Clinics, designers and labs connect on a Single platform solution, agnostic to brands. This cost effective system can reduce 30% chair time and reduce return jobs to less than 1%, without changing the way dentists work.

Amrulo is providing a perfect solution for increased hygiene in times of COVID19 by scanning the impressions and protecting the dental technician from COVID19 eliminating physical contact, while saving the doctor time and money on unnecessary disinfection.

For clinic chains, we provide a centralized flexible management system for all their **Restoration and Orthodontics** works, giving the chain insights about its suppliers and practitioners while improving efficiency.

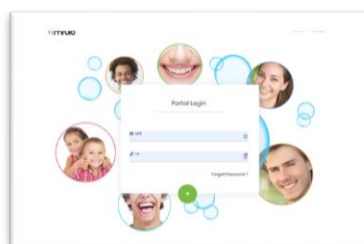

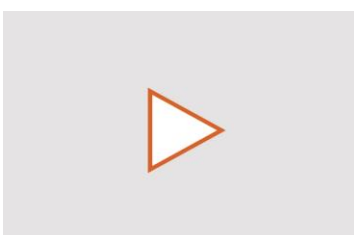

We **support** the clinic during the full process from the impression/intra-oral scan all the way to the perfect fitting of the unit in the patient's mouth.

Amrulo is bridging the geographical divide, enabling designers, labs and production centers to broaden their reach and dentists to give better service to under-served areas.

AMS – Air Moving Solutions

www.airms.co.il

Dental Sectors

Clinics
Infection Control

Product Categories

External suction and air
purification equipment

Relevant also for
COVID19

AMS develops & manufactures air purification systems. DENTAL PURE is a suction, filtration & purification system for dental clinics.

AMS uses only the highest quality materials and guarantees the customer a long warranty and first-class service.

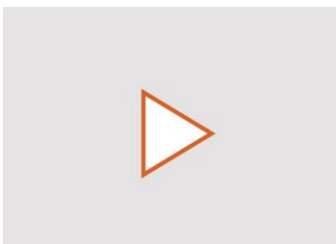

Clinics are at high risk of infecting staff and patients with viruses such as COVID 19 during treatments with ultrasonic scalers and turbines. The aerosol particles in the air adhere to the clinic staff and land on many surfaces in the clinic.

The patent pending DENTAL PURE with a multi-joint suction arm was developed with dentists. It is compact to allow minimum disruption to staff and patients while ensuring maximum safety due to its very high level of filtration (H14) of viruses and bacteria. Its extra strong suction power protects the staff while ensuring quiet operation, suitable for long-term work in clinics. It has unique ability to absorb and handle liquid-saturated air, preventing a decrease in the quality in filtration, and avoiding growth of contaminants within the filtration systems. A heating element allows safe handling of filters replacement.

Video:

B-Cure Laser Dental Pro: The Innovative, Effective Treatment for Post-Dental Procedures

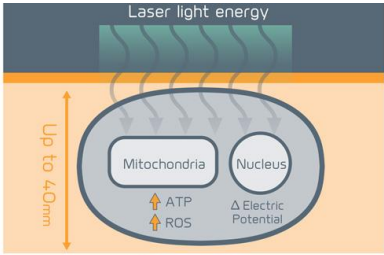

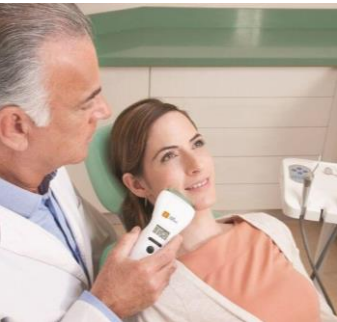

B-Cure Laser Dental Pro, has developed a patented, clinically proven Low Level Laser Therapy (“LLLT”) medical device, for an effective treatment of clinical conditions in dentistry:
B-Cure Laser Dental Pro is a new solution that provides dentists with the option of offering patients an adjunctive treatment, using a simple, safe and mobile device.

Treatment with the device assists patients during the post-treatment recuperation process, by significantly reducing pain and swelling, helping them to return to their normal lives sooner.

Combining this effective therapy with the ability to provide immediate initial treatment at the clinic and continuous treatment at home, results in faster, high-quality recovery

Looking for

Distributors, Strategic Partners for B2B& B2C

Clinical effects:

- Promotes wound healing
- Reduces inflammation
- Reduces pain

FDA 510k submission is
planned for late 2021

Video:

CoreBone bioactive coral bone graft is the natural alternative to bovine and human derived bone grafts.

CoreBone has developed a bone graft material made **from corals grown in CoreBone's coral farm and enriched with bioactive nutrients** to leverage its bone-enhancing properties.

This closed, highly monitored system eliminates the environmental and biological risks of using sea corals and ensures product quality and consistency. CoreBone graft have similar qualities to human (allograft) bone, but it delivers better remodeling than bovine products, as no heat treatment is required.

Clinical results are similar to world leading products, made from animal bone yet CoreBone offers safer, more attractive alternative in diverse market segments such as environmentally conscious holistic and religious (Muslim, Hindu)

With over 4,000 dental procedures in Europe and Israel, CoreBone will be soon available in China, Brazil and Taiwan.

KOLs: **"CoreBone, it's like Bio Oss,®"** the world's leading bone substitute and the gold standard in dental (bovine).

Education
Artificial Intelligence (AI)

DentalMaster, the unique cloud artificial intelligence for treatment planning and patient education.

Dentalmaster has succeeded in developing an Artificial Intelligence software that allows users to obtain in less than 20 seconds not only a real interactive 3D model adapted to the patient, but also to incorporate most of the prosthetic restorations adapted to his situation. This revolutionary 3D AI software is accompanied by additional modules:

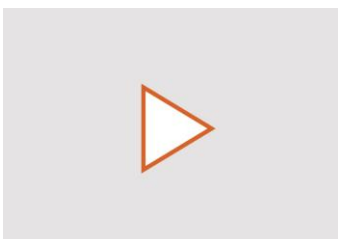

- Bank of 400 animations
- DentalMagic to recreate smiles and preserve the shade of the Teeth
- Dental2drawing to improve your drawing skills
- DirectInfo Waiting Room, Inform your patient during his stay

The fact that the DentalMaster solution is on the cloud allows the dentists to use the system on any device, any platform, at any time. DentalMaster supports and improves the daily practice of dentists by creating better communication with their patients.

Intraoral 3D scanner

Video of clinical sample

DentlyTec has developed the DigiCord™, the next-generation Intraoral scanner.

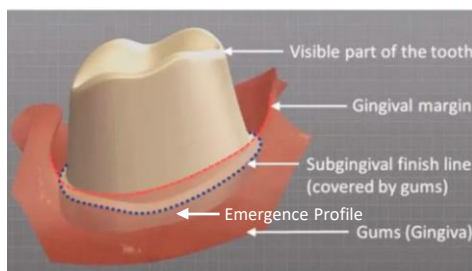

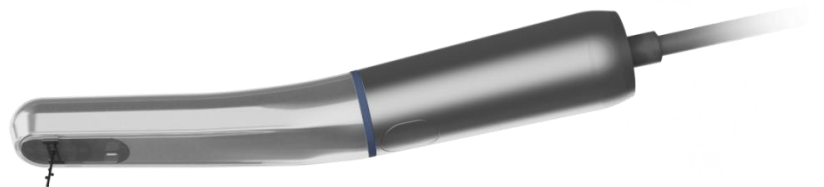

The DigiCord™ is a game-changing intraoral scanner as it's the only intraoral device that can measure below the gum line. Thus, it can accurately scan the invisible subgingival finish line with the emergence profile with and eliminate the need for cord packing.

The DigiCord™ also scans the visible parts of teeth and is not affected by the presence of blood and fluids, thus enables to take the impression immediately after the preparation.

This affordable full color intraoral scanner allows crown completion treatment in a single visit. It also improves the clinic's productivity by saving 30 minutes of chair time with better clinical results!

Looking for

Investors, Strategic Partners

The DigiCord™:

- ✓ Smallest form factor, held like a handpiece, improved user experience
- ✓ Single visit
- ✓ Low-cost accurate 3D models
- ✓ Full Subgingival & full arch scanning
- ✓ Eliminates labor intensive gum preparation process
- ✓ **No cord packing!**

Product Categories

Dental equipment
& work aids:

Dental Units & Carts
Cuspidors
Chair side filter
Plastic disposable trays
Evacuation tips
Mirror suction Holder
Mini Box,
Stand alone & complete
delivery systems

ETI Dental industries ltd manufactures dental equipment for the last 40 years. ETI products are well known for their heavy-duty reliability, sold to hospitals, HMO, the IDF and private clinics worldwide.

The dental units and carts based on a pneumatic system which is simple, durable, easy to service, with porcelain tops on the unit and cuspidor for long-lasting white color and easy cleaning. Our equipment includes leading manufactures components, e.g.: TECNODENT, FARO, DURR, ACTEON, DCI, CATTANI.

We developed a **revolutionary filtration system - ETI BIOMAT FILTER**. This new model is suitable for internal & external installation in a variety of types of dental units, and connects easily with Dürr Connect to the existing piping. The uniqueness of the system is in **multi-stage filtration** (none electric), which allows effective filtration **without compromising the suction power**; the filter prevents debris from penetrating the suction infrastructure, thus avoiding blockages and bad odors. ETI has a registered patent for the BIOMAT FILTER.

ETI manufacture other products such as disposable dental plastic trays, plastic evacuation tip, mirror suction holder and more...

Apex Locator
Implant detector

Forumtec is a leading developer and manufacturer of electronic dental devices & advanced dental equipment, a leading player in its markets.

Forumtec launched its first apex locator, Bingo1020 in 1998, embedding a unique patented technology. Today, various models of Forumtec's Apex Locators are produced and marketed as both proprietary and OEM products, distributed through leading international brands, and achieving a 40% market share.

New! Wirele-X is a state-of-the art, the first and most innovative wireless Apex locator module (WALM) embedding Bluetooth technology, and eliminates the need for connecting cables. The **NovApex N31, and RomiApex A15** are compact take up minimal space and provide all essential information, presented on a color LCD display with large apical zone.

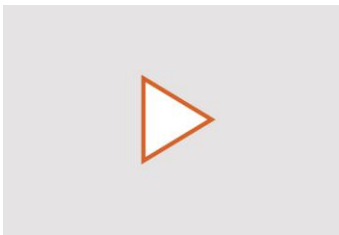

Forumtec's Implant Spotter is the first and only Implant detector available on the market. It accurately detects implants covered by gum tissue in a two-stage implantology process. The Implant Spotter minimizes pain and healing-time for the patient, while reducing chair-time to maximize treatment.

Forumtec's products are FDA cleared and CE-Marked

- Innovative Antibacterial Dental materials:
 - Composites restoratives;
 - Adhesives; Sealants;
 - Cements

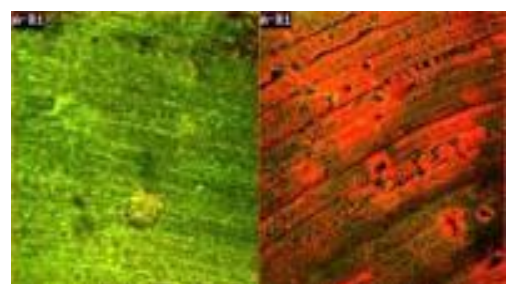

Nobio offers Infinix™ - a line of revolutionary antimicrobial restorative materials, with long-lasting anti-caries preventive action, to protect against recurrent decay and treatment failure.

The dominant reason that composite restorations fail is recurrent caries, caused by bacteria. Based on 15 years of groundbreaking research, Nobio is now commercializing the Infinix line of revolutionary, antibacterial restorative materials, the first with active protection against recurrent decay. One of the most important advancements in restorative dentistry in decades, Infinix is the first restorative material with FDA clearance for active anti-caries effect. Read more at www.infinix.com.

Nobio is in process of expanding the Infinix line to include additional innovative dental materials containing the long-acting antimicrobial technology, such as cements, sealants and preventive materials. The effectiveness and safety of the technology was reported in 22 publications and four clinical trials.

Liper Device - The first-ever tongue training device for tongue-tie treatment

The patented Liper Device changes the treatment paradigm of tongue-tie and sub-functional tongue.

Meeting FDA Low-Risk Wellness product regulations, it is the first to provide an applicable tongue training solution, finally allowing comprehensive treatment and high rate of home treatment compliance. Tongue training is a vital part of tongue-tie and oral dysfunction treatment. It has a significant impact on the long-lasting success of the treatment and the patient's future health and well-being.

Tongue flexibility and mobility are essential for everyday body functions.

Encouraging proper tongue motion and correct posture leading to its flexibility and mobility, has a significant and direct impact on solving breathing and sleeping problems (sleep apnea), breastfeeding and eating problems, speech and more... for newborns and adults.

- 34.6% of newborns are born with tongue-tie (Based on research)
- 30%-50% of School-Aged Children in the USA are being treated because of tongue malfunction.

Apex Locators
Innovative Files
Disinfection kit

MedicNRG specializes in endodontic products that developed a breakthrough approach to root canal preparations, solving many clinical & operative problems.

Gentlefile is a unique rotary file adhering to canal walls (centrifugal effect), achieving cleaning results unmatched by regular rotary files. Its ultra-flexibility with no metal memory reduces various procedural errors.

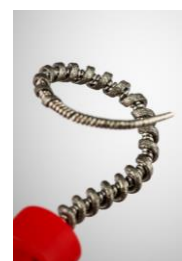

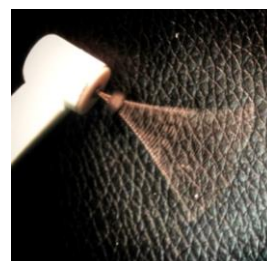

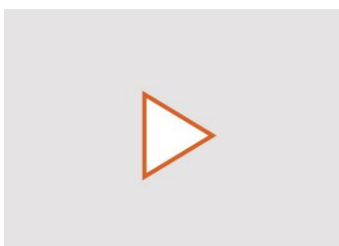

The **Tornado kit** comprising of Gentlefile Red & GF Finisher Brush is specially developed for cleaning and disinfecting canals shaped by NiTi rotary files. Gentlefile Red can clean the remaining untouched areas (50%) by NiTi rotary file, while GF Finisher Brush, with its 7 tiny wires (0.08mm), each revolving at 6,500 rpm, to create a tornado-like current enabling sodium hypochlorite to penetrate canal irregularities for disinfection, flushing debris out and destroying smear layer and biofilm stuck on the canal wall and pathogens inside the tubules, achieving unparalleled cleaning and disinfecting results.

Rider apex locator is the first and only apex locator with Digital Signal Process technology. Compared to leading brands, Rider achieves the highest accuracy of 0.1 mm deviation. Its real time feedback can eliminate the need of stop-and-check hassle when used with NiTi handpieces. Can be used mounted on the handpiece or as satellite mode with the handpiece or for manual measuring.

PIS – Post Implant Solutions

Dental Sectors

Periodontics
Implantology

Product Categories

Prosthetics

PIS is the development of a new start up that deals with the most acute problem of implantology: Periimplantitis!

It is the inflammation around new implants that leads to their fast failure, due to bone loss. This bone loss makes it very hard to make a new implant as a replacement.

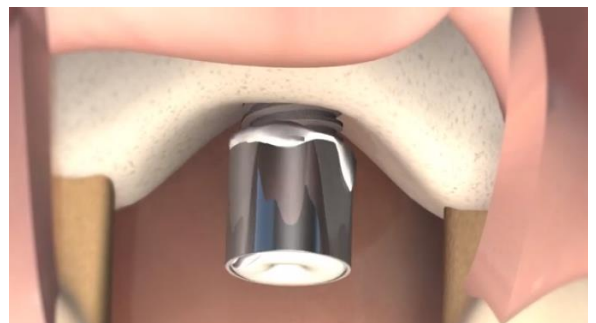

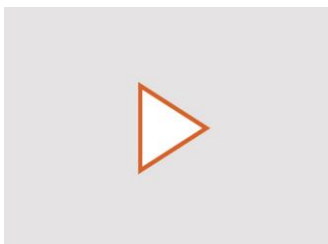

Our PIS - Post Implant Solutions allows this inflammatory process to stop and enables the patient to continue enjoying his implants for a long time. Thus saving the dentist and the patient great inconvenience and suffering.

After cleaning the implant area, a sleeve is inserted with tissue friendly bacteriostatic cement to close the gap. The sleeve can be smooth, thus enabling attachment of the gingiva by long epithelial attachment. Or we can provide a rough surfaced sleeve for bone augmentation. The same abutment and same crown can be returned on the implant..

Video:

Prudentix is an emerging R&D company focused on development of innovations in Periodontology and oral care.

Pocket X Gel is a CE approved patented intra-gingival syringe indicated to improve the healing of the gingiva and to inhibit bacterial re-colonization in periodontal pockets. Due to its Thermodynamic properties, the gel which is administered as a liquid, solidifies upon contact with body temperature into a thick gel that adheres to the pocket, fills, and seals it.

It is an adjunctive treatment, after root surface debridement (RSD) or scaling, intended to inhibit bacterial recolonization in the periodontal pocket, and constitutes part of a routine periodontal treatment program conducted by a dentist or a dental hygienist.

Other developed products target tissue regeneration (protein based), halitosis (muco-adhesive tablets) and oral hygiene.

Tanigo is a disposable Suction-Mirror tool that combines the suction and the mirror functions in one device, enabling the use of only 2 hands rather than 3, during Dental procedures.

The suction is performed over and beneath the mirror simultaneously, whereas the upper suction layer provides also smooth suction of the water droplets and particles sprayed on the mirror.

The Anti-Fog mirror together with the Mirror Angle and the position of the different Suction Intakes, provide incomparable suction efficiency as well as clear visibility throughout the entire procedure.

Tanigo is an ideal solution for dentists when coping with the Corona virus pandemic challenges, by reducing the amount of aerosols in the patient's mouth and the Clinic environment, relieving the Dentist from having to clean the fog and droplets off the mirror during the procedure, and by being disposed after each session.

Guttapercha cutting
instrument

The Guttacut™ Instrument: a Safer & Faster method for cutting the gutta percha during root canal treatments.

This precise instrument completely eliminates the possibility of accidentally burning the patient's mouth as it is inserted into the patient's mouth in a cold state, and heats up instantly when needed, As soon as the cutting has taken place, the button is released to cool down within second for safe removal from the patient's mouth.

The loop on the cutting tip provides easy access to the cavity as it catches the excess gutta-percha precisely at the canal orifice. This hot cutting prevents the filling material from becoming loose unintentionally.

The Instrument is supplied with 4 different size of cutting tips, which are removable and reusable.

The Instrument is distributed in Europe (VDW), Japan, South Korea, ...

The Guttacut™ - Smart Instrument offers you: Safety of use, Simplified, Flexibility as well as Time & Cost efficiency.

Video:

The patented Modular type Dental Implant MtDI™ is a game-changer, eliminating total extraction in case of Peri-implantitis.

This system is compatible with standard implants dimensions, tools & techniques. It consists of multiple sections (rings) that easily connect or separate to achieve a customized length during the implantation process. It includes a novel **TABS™** preventing leakage around implant.

Over time, Peri-implantitis affects 1/5 of all implants and 1/3 of the patients. As there is no reliable treatment available, often dentists must completely replace the implant. This painful and costly process is felt as a clinical failure. It is time consuming for the dentist and increase risks of complications.

With Zeev's modular Implants, dentists can simply remove the bacteria-infected ring and replace it with a new sterile one, eliminating risks and costs due to total extraction. It furthermore provides the ability to re-use original crown & bridges It's critical in cases of poor prognosis patients (smokers, diabetes etc.)

This system can be adapted for each manufacturer to offer an alternative solution to peri-implantitis management by its own design.
