PILETEST

Company profile

At Piletest we develop and manufacture systems for quality control / quality assurance of deep foundations since 1996. Our focus has always been on quality, modularity and ease of use.

Quality

All products undergo extensive testing, including pressure chamber, vibration table, heat oven and more, and carry a full three (3) year warranty (Excluding physical damage).

Modularity

We focus on building pile testing systems, not on computers. Therefore, all our products connect to a standard PC, Laptop, Tablet, Smartphone via USB or Bluetooth connection. This approach minimizes your downtime and keeps you up-to-date and independent, and reduces your overall costs.

Ease of use

We take simplicity and usability very seriously. As a result no formal training is usually required and our users usually start using our systems out-of-the-box within minutes. Our ease of use knowhow, is based on years of field work before started designing our own equipment.

Support

It is important for us, as well as it is for you that your final product—the *test report*, is of the highest standards. To help you with this we provide free on-the-job training. We also support you with the analysis of your first projects, and can revise the next ones and comment on the following ones, until we are both satisfied with the results.

CHUM

The **CHUM (Cross Hole Ultrasonic Monitor)** uses the Crosshole Sonic Logging (CSL) method (ASTM D6760-16) to perform high-resolution quality control on deep foundations. The system uses an ultrasonic wave sent from an emitter to a receiver while both are pulled through water-filled access tubes embedded in the concrete. The measured arrival time and energy are directly related to concrete quality.

Additional methods supported by the CHUM are Single Hole Ultrasonic Testing (SHUT) and Tomography (two- and three-dimensional).

Main features:

- Easy to use; The user-friendly software makes it possible to master the CHUM in less than a day. No additional expensive training required
- Powerful tomography features
- Unlike other system based on an embedded computer (which may soon become obsolete), CHUM connects to the USB port of your regular notebook computer or Tablet PC.
- Automatic Gain Control (AGC)
- Standard Relative Energy (RE) display

The basic CHUM package includes everything required to perform CSL and 2D tomography:

- The CHUM instrument, two ultrasonic transducers, two 50m cable reels, two depth meter pulleys, cables and AC power adapter
- Optional: 100m/150m cable reels, 3D tomography
- Testing, analysis and reporting software
- Interpretation assistance package
- 10 years of free software upgrades
- 3 year warranty on hardware

The **CHUM** system
(computer not included)

Typical output

3D tomography is available as a free on-line service for 1 year

CHUM - Technical Specifications

Physical	Housing	Rugged, Environment-proof, water-resistant housing.
	Dimensions	430mmL x 325mmW x 105mmH (instrument only)
	Weight	3.8 kg (instrument only) 5.0 kg (instrument with typical tablet) 16.0kg (Typical shipping)
	Temperature range	Operating : -25°C to 60°C Storage : -40°C to 70°C
Power	Internal	Rechargeable Lithium Ion battery 11.1V 4.4Ah (two days of typical use)
	External	100-240V AC operation/charging
Standards	ASTM D6760 –16	Meets or exceeds
Technical	Transducers	Dual-Purpose transceivers, 50kHz nominal, pressure-tested housing, 25mm diameter
	Cables	Heavy-duty polyurethane wound on reel
	Sample rate	500kHz (2µS resolution)
	Gain	8 level automatic gain control (AGC)
	Depth meters	Two 24-bit counters. <0.1% error
Performance	Pile lengths	1m to 145m
	Tube spacing	Up to 5m in good concrete
	Productivity	Up to 3000m/Day by a single operator
	Storage	Unlimited
Requirements	Computer (Minimum)	MS Windows Win7/ Win10 / Win 11. Screen resolution 1280x1024 or higher
Output	Reporting	Arrival time, energy and wave speed curves, “waterfall” presentation, fuzzy-logic and 3D tomography
	Language	Multi-lingual user-interface and reporting
Options	Cable reels	50m, 100m, 150m and custom lengths
	Software	Three-dimensional tomography (Also provided as a service over e-mail)
	Miscellaneous	12V DC car battery power adapter

CHUM 3DT

The CHUM 3DT (3D Tomography software for CHUM) is the most advanced, easiest to use and highly practical 3DT solution available today.

3D Tomography reveals and organizes information about flaws in the piles in a human-readable form and helps making well-informed decisions.

Main features:

- Easy to use: Wizard-based interface hides the complexity of the calculations.
- Interactive UI—Zoom, rotate, tilt.
- lightning-fast calculations and graphics.
- Vertical and horizontal slices at any depth/direction.
- Immediate velocity threshold selection.
- Wireframe, Opaque and semi-transparent options help visualize the flaws.
- Create a report in a video clip form, in a document form or hand over the free 3DT viewer for anyone to view the results interactively.
- 10 years free software upgrades.

This link demonstrates the 3DT in video [CHUM 3DT Video](#)

PET - Pile Echo Tester (Model: PET Pro USB)

Piletest's Pile Echo Tester (PET) is a user-friendly, highly flexible solution for testing a large number of deep foundations quickly and accurately.

Requiring little-to-no training, PET is a modular, computer-independent system that attaches to the USB port of any regular notebook or a Tablet PC.

The PET system utilizes the pulse-echo method (compliant with the ASTM D5882-16 & AFNOR P160-2,4 standards). To test a pile, the user strikes it with PET's lightweight handheld hammer. The resulting signal, or reflectogram, is captured by PET's digital accelerometer. It is then transmitted to the computer to produce information about the pile's length and shape. PET Pro USB is CE certified for EMC & Safety requirements Directive 2014/30/EU & LVD 2014/35/EU.

Main Advantages

Ease of use: PET's user-friendly software makes it possible to master the system in less than a day. No additional expensive training is required

Excellent signal quality: PET's super low noise level enables the system to handle extremely long piles

Computer independence: Unlike other system based on an embedded computer (which may quickly become obsolete) PET connects to the USB port of your regular notebook computer or Tablet PC.

Labor saving: PET includes a number of labor-saving features such as advanced project organization; software-suggested wave velocity; Smart Trigger™ and AutoSort to reject anomalous blows; one-touch controls of scale, amplification, and filtering; plus many more features.

Robustness: Specially designed for testing piles, shafts and caissons in construction site environments. The PET sensor is IP67 waterproof and comes with a three (3) year warranty.

The PET Pro USB package includes:

- A digital transducer with waterproof USB cable
- A nylon hammer, spare tips, special putty
- Testing, analysis and reporting software (unlimited number of licenses)
- Interpretation assistance package

PET - Pile Echo Tester (Model: PET Bluetooth)

Piletest's Pile Echo Tester (PET) is a user-friendly, highly flexible solution for testing a large number of deep foundations quickly and accurately. Requiring little-to-no training, PET is a modular, computer-independent system that connects to any compatible computer via Bluetooth protocol.

The PET system utilizes the pulse-echo method (Compliant to the ASTM D5882-16 & AFNOR P160-2,4 standards). To test a pile, the user strikes it with PET's lightweight handheld hammer. The resulting signal, or reflectogram, is captured and transferred to the computer by PET's digital accelerometer, providing real-time information about the length and shape of the pile. PET Bluetooth is CE certified in conformity to all the essential requirements of RED 2014/53/EU

Main Advantages

Ease of use: PET's user-friendly software makes it possible to master the system in less than a day. No additional expensive training is required.

Excellent signal quality: PET's low noise level enables the system to handle extremely long piles.

Computer independence: PET Bluetooth connects to any existing or future computer. PET Bluetooth also connects to any Android smartphone or tablet. There is no dependency on an embedded computer (which may quickly become obsolete).

Labor saving: PET software includes a number of labor-saving features such as advanced project organization; software-suggested wave speed; Smart Trigger™ and AutoSort to reject anomalous blows; one-touch controls of scale, amplification, and filtering - plus many more features.

Robustness: The PET is specially designed for testing in construction environments, with bullet-proof Lexan . It is IP67 waterproof & carries a three (3) year warranty.

The PET package includes:

- A digital transducer
- A nylon hammer, spare tips, special putty
- Testing, analysis and reporting software
- Interpretation assistance package
- Unlimited number of software licenses

PET Bluetooth with an Android smartphone

PSI - Parallel Seismic Instrument

PSI uses the well-known Parallel Seismic method to establish the depth of existing foundations (specifically piles) where the superstructure precludes access to the pile heads.

The test requires the installation of a plastic access tube in parallel, and as close as possible, to the tested pile. The tube should be carried down to a depth exceeding the assumed pile length by a margin of 8-10 m and filled with water. In unsaturated soils the tube should be firmly grouted in the hole to achieve good acoustic coupling with the surrounding soil.

System Components:

- (1) PSI instrument
- (2) Sledgehammer with a trigger switch
- (3) Digital depth meter
- (4) Hydrophone

* PSI2 is compliant with AFNOR NF P94-160-3

Operation:

As the hydrophone is lowered in stages inside the access tube, the superstructure is hit with the hammer and the pulse arriving at the hydrophone is recorded in the PC that is connected to the instrument. When all the pulses thus collected are plotted versus the respective depths, they show a typical break in the slope at the depth where the pile tip is located.

Advantages:

- Ease of use: It is usually self-taught in less than a day. No additional expensive training is needed.
- Connects to any PC/Laptop via a standard USB port.
- Interpretation assistance and Second Opinion Services (SOS) included.

PSI 2 System Components

BIT - Borehole Inclusion Tester

All piling specifications prescribe the allowable deviation of the pile axis from the vertical. Typical limits vary between 1.33% (UK ICE) and 2% (US FHWA). In diaphragm and secant pile walls, the specification is typically more restrictive.

Unlike traditional systems, BIT uses the auger/bucket itself as a centralizer, thus eliminating the need for a bulky system. The BIT enables fast and accurate determination of inclination in both dry and wet boreholes, vertical or raked.

BIT is compliant with the ASTM D8232-18 standard.

Large boreholes and diaphragm-walls may be quickly tested several times during drilling to enable real-time corrective action. [Operation in a Borehole](#)

Finished pile inclination can be measured through the CSL access tubes. [Operation in a Pile](#)

System components:

- (1) BIT instrument, microcontroller-driven, with wireless communication to peripherals and durable cable connection to the sensor.
- (2) Sensor including precision bi-axial inclinometer and a gyro, waterproof to 160m.
- (3) Wireless depth encoder.
- (4) Android smartphone or tablet with software and Bluetooth communication (not included).
- (5) Access-tube adapter / centralizer (optional)

Operation:

In the open hole, the inclinometer is rigidly attached to the drill bit (bucket or auger) and the depth encoder hung from the rig. The bucket is then lowered (with minimal axis turning) into the open hole. The descent is stopped at predetermined depths for inclination reading and the deviation calculated in real time by integrating the inclination over depth. When pulling the bucket upwards to the surface, the procedure is repeated. The resulting closure error is distributed over the whole depth.

With the optional access-tube adapter, the BIT can also check the as-made inclination of bored piles.

Schematic view

The BIT system with access tube adapter / centralizer

GPC Dynamic Pile Testing System

Piletest's GPC is the next generation of dynamic pile testing systems. It is designed with simplified software and higher ease of use than past systems. The GPC system was designed with Professor George G. Goble, the pioneer of dynamic pile analyzers. The GPC complies with ASTM D4945 - Standard Test Method for High-Strain Dynamic Testing of Deep Foundations and Eurocode EN ISO-22477-4.

To test a pile, you need to connect only two dual-purpose sensors to it. The system box can be attached to the pile under test and, via a lossless wireless communication, sends all the monitored data to your computer. This concept makes the construction site work much easier and faster to operate.

To measure four (4) sides of a pile, two main box systems can be operated concurrently with a dual WiFi connection computer. The collected data is processed by three (3) state-of-the-art s/w packages:

GPC Acquisition — For collecting the sensors data and presenting real-time driving plots.

GPC Review — Reporting of test results and capable of automatic signal matching.

N_GAPA—An Automatic Pile Analysis software for signal matching analysis. Proven to be equal to CAPWAP, and faster.

Main Advantages

Lossless Wireless Transmission: The signal is digitized in the transmitter box. The system is wireless by design using WiFi IEEE802.11ac, which is more reliable than Bluetooth or 2.4 GHz radio of other dynamic pile testing systems.

Cost Efficient: The transmitter box has a wire connection (optional). It uses a low-cost standard CAT5 Ethernet cable (vs. expensive DLT cable) reaching up to 100 meters. Digitization ensures zero signal loss on 100m cable length.

Simplicity: Single data box for both sides of the pile.

Fast to operate: Combination transducer, strain gauge, and accelerometer are combined on one bolt-on sensor minimizing drilling time and complexity.

Intuitive Programming: UI has been purpose-built to be very intuitive and easy to use with real-time plots.

GPC System works with any

Four (4) clear graphs:
 Fi, VZi, F&V, WU&D
 (All are presented in L/c scale.
 Live capacity plot, presenting soil resistance per each blow)

N_GAPA Automatic Pile Analysis software

Piletest's N_GAPA is the next generation of automatic pile analysis software for dynamic pile testing, comparable to and better than CAPWAP*. N_GAPA software estimates the total bearing capacity of a pile or shaft, as well as resistance distribution along the shaft and at the toe. It is easy to use and super-fast. N_GAPA and CAPWAP results are the same, which can be used on any pile type/shape/ or size. On the right are test results using the GPC system with CAPWAP vs. GPC results with N-GAPA using the same pile simultaneously. The results show a strong correlation between N_GAPA and CAPWAP* analysis software.

Comparison of CAPWAP VS. N-GAPA results

#	Type	Pile	RU activated				Difference to CAPWAP			Lumped JC
