*Clinical trial of 90 patients affected by joint-related pain (TMJ), Sapienza, Rome, Italy

HOW DOES B-CURE LASER WORK?

Low-level laser therapy (LLLT) (also known as cold laser) is a laser beam that acts on the surface of the skin and at the same time penetrates deep into the tissue with no heating effect and without damaging the skin.

- Stimulates cell activity & strengthens cell signals that relieve pain, fight chronic inflammation and accelerate wound healing
- Releases endorphins that relieve pain
- Increases the production of ATP that accelerates wound healing and fights chronic inflammation
- Stimulates blood and lymph flow that reduce edema and accelerate wound healing
- Increases the formation of collagen & elastin, that accelerates wound healing
- Increases efficiency of the body's natural immune system

Safe

Easy to apply

No known side effects

Cost-effective

Non-invasive

USER RECOMMENDATIONS

“ I highly recommend the b-cure laser as it has helped me to eradicate constant pain that I have had in my hip joints for years... I began using it, and felt a huge difference within 3 weeks. I no longer have pains and can do exercises now that used to cause me great pain. ... I consider it to be nothing short of miraculous!! thank you b-cure laser!

Lorraine Lemberger

“ I have had a problem with chronic neck pain and shoulder injuries for years. A neuromuscular massage therapist recommended the B-Cure Laser. I bought the Sport several years ago and I must say it worked very well at diminishing the pain. I now recently purchased the Pro and have experienced very good results ... Thank you Good Energies for a great product.
