

FULL-CYCLE AUTOMATION

Scaling Up RPA with Unprecedented ROI

In our ultra-competitive global economy, enterprises in pretty much every industry are increasingly aware that automation is changing the way businesses work for the better. But how can companies best take advantage of these incredible opportunities without creating complexity and friction or causing inefficiency rather than eliminating it?

For enterprises beginning their digital transformation in this dynamic environment, the crucial factors in maintaining a competitive edge are cutting costs, boosting operational efficiency, increasing employee satisfaction and providing a superior customer experience. As such, [Robotic Process Automation](#) (RPA) is a key business enabler in today's market.

However, to stand any chance of delivering on their promises, automation solutions must fully address the real needs of real businesses. This is precisely where full-cycle automation completely changes the game.

RPA Is No Longer Enough – Say Hello to Full-Cycle Automation

To ensure that every automation journey is a success from start to finish, we at Kryon designed and built our unique [Full-Cycle Automation Suite](#). The only one of its kind on the market, this total automation solution combines Process Discovery™, RPA, and analytics in a single, unified platform. Importantly, it also has a proven track record in the field and a rapidly growing base of happy customers thanks to its ability to deliver an ROI of over 350%¹ and cut implementation time by up to 80 percent.

Discover and Map

Kryon's full-cycle automation revolution starts by identifying which processes are ideal candidates for automation. After our extensive research found that a massive 70 percent of automation project resources were actually spent *pre-automation*, we created [Kryon Process Discovery™](#). Powered by patented proprietary AI technology, this market-leading tool works unobtrusively behind the scenes to automatically generate a comprehensive picture of manual business processes and their variants, evaluate them and recommend which ones to automate. It then generates workflows instantly.

Optimize and Develop

With just a few quick clicks, these workflows are exported to the [Kryon Studio](#) for automation design, optimization, and development. The Kryon Studio is a powerful, user-friendly authoring tool that lets you develop, optimize, and edit automation workflows and have them ready to go within just a few hours.

Automate

After Kryon Process Discovery™ has identified the processes suitable for automation, automation bots begin their work. The Kryon Full-Cycle Automation Suite offers three different types of unmatched intelligent RPA solutions depending on a business's specific needs.

Attended Automation

Empower your employees to complete tasks with greater speed, accuracy, and efficiency by enabling them to request guidance from [Kryon Attended Robots](#) or have tasks automated on demand. Kryon is a market leader in Attended Automation, which can lead to a 70 percent increase in employee efficiency.

Unattended Automation

Equipped with intelligent decision-making ability, [Kryon Unattended Robots](#) work 24/7 behind the scenes to execute the high-volume, repetitive, and time-consuming tasks that your employees love to hate.

Hybrid Automation

Even the most automated processes sometimes require a human touch, and that's exactly what [Hybrid Automation](#) brings to the party. Kryon is a market leader in Hybrid Automation, integrating your virtual and human workforces to lift your automation strategy to the next level.

Analysis and Orchestration

An automation project isn't over just because it's up and running. Kryon's Full-Cycle Automation Suite lives up to its name right to the end by allowing you to continually analyze your project's KPIs after deployment, giving you all the tools necessary to orchestrate its different elements for optimal performance, satisfaction and wise decision-making.

What Our Customers Say

JUSTIN KRUSE

Operations Consultant, LTCG

"We've had a lot of good success using [Kryon's] solution for the full-cycle of automation from the discovery of processes to turning on the automation and scaling it up."

GURURAJ SUBBARAO

Director, Cognizant

"[Kryon is] really good for end-to-end RPA."

JOEL STRASSBURG

Director of Process Engineering,
Direct Supply

"[The Kryon Full-Cycle Automation Suite] does what it needs to do... pretty flawlessly."

TEUJE TAP

Lean Navigator, Raet

"[Kryon's solution] will allow you to automate processes fast and easy and you do not need to be a developer."

Why Choose Kryon's Full-Cycle Automation Suite?

The **only proprietary automation solution** on the market that brings Process Discovery, RPA, and analytics together under one roof, all in a single, **unified platform**.

352% ROI

An extensive and **proven track record** of successful automation deployments with an **ever-expanding base** of satisfied users.¹

80%

80% **reduction** in RPA implementation time and **pioneers and market leaders in Process Discovery**.

Patented computer vision technology for enabling process automation in minutes rather than hours.

Leads the automation industry in **Attended** and **Hybrid RPA**.
