Water from Air for
People Everywhere**

Creating Drinking Water from Air

Watergen provides a revolutionary water-from air solution based on the worldwide patented GENius technology. The company has devoted its proprietary innovation to the mission of solving the world's water crisis. Watergen's technology provides the opportunity to access a new and unlimited premium quality drinking water source, and its solutions are the most effective and economical way to resolve water scarcity in any location and at any time. Today, Watergen's devices are deployed in more than 80 countries around the world and successfully help reduce plastic waste and eliminate carbon-intensive water supply systems. Watergen game-changer technology has been integrated in the automotive industry and can provide fresh drinking water while traveling on board cars, buses, RVs, trains, and even boats.

Truly GENius - Watergen Patented Technology

The GENius is a unique energy-efficient heat exchange module, capable of generating premium-quality drinking water in the widest range of climatic conditions, with high energy efficiency and water production capacity. The GENius technology enables a scalable drinking water solution for a wide range of market segments, various applications and is designed for small and large daily volumes. Watergen's solutions are "plug-and-drink," creating a drinking water source right at the point of consumption and can produce from 20 up to 6,000 liters of top-quality pure drinking water per day, using a standard connection to electricity or other renewable energy sources.

ON BOARD**
Up to 50 liters/day

Technology for a Better World

Access to safe water allows people more time to pursue education and work opportunities, reduces health expenses and helps break the cycle of poverty.

Since 2009, Watergen built a leading team of multidisciplinary experts with decades of experience, to combat the world's water crisis. This enabled the establishment of one of the top research and development centers in the Middle East, leading to new frontiers in water sciences. Additionally, Watergen partnered with leading universities to make sure that this extensive research and expertise serves the goal of enabling every individual access to clean and safe drinking water.

Awards
