# Octopus systems

COMMAND & CONTROL PLATFORM

CLIENT CHALLENGE:

Organizations manage too many disparate and disconnected security technologies and devices – from cameras, alarms, and access controllers to anti-virus, firewall, intelligence feeds and building management systems – resulting in inefficient and ineffective security and safety operations

OCTOPUS FEATURES

One stop shop, all-in-one, Cloud-enabled security Command & Control

OCTOPUS MODULES

We offer over 30 different interoperable modules, including:

1. Command & Control
2. Incident Management
3. Visitor & Supplier Management
4. Homeland Security
5. Risk Management
6. Intelligence and Threat Monitoring

OCTOPUS SYSTEMS:

OUR SOLUTION

Octopus is a comprehensive, all-in-one Physical & Cyber Security Information Management and Situational Awareness application designed and developed in Israel by security operations experts.

Octopus offers users an All-in-One Platform for full Command & Control of security, safety and facilities operations and the ability to leverage all your technology tools from a single pane of glass.

Octopus is state-of-the art, innovative, modular, flexible, user-friendly, easy to install and affordable; our Microsoft-based solution is Cloud-enabled or can be installed on-premises.

Octopus supports Incident Management with a Web-based platform that receives all incidents and threats, and instantly correlates information to show the real situation and priorities.

Octopus dispatches forces and easily deploys procedures: improve efficiency and cost effectiveness by managing your staff, locally, regionally, nationally or globally, by monitoring all your assets and automating all your technologies from one user interface.

Octopus includes a robust mobile application (Android or iOS) to engage in two-way communication with subscribers through a dedicated, encrypted tool that puts powerful Command & Control capabilities in the palm of your hand.

OCTOPUS SYSTEMS:
