Uncover Your Hidden Attack Surface

The Biggest Challenge CISOs Face Today

The IT ecosystem is constantly growing; attack surfaces become increasingly complex and dispersed. Most organizations lack the capabilities required to validate their security coverage across old and new surfaces which include On-Prem, Cloud, IoT, SaaS applications and more.

Attackers became more sophisticated in recent years, the old inside-out approach of defending yourself inside the perimeter is no longer sufficient and organizations require new solutions that will help them visualize and detect threats from the outside-in "The Attackers Perspective".

Ovalsec Attack Surface Management Platform

Ovalsec is a cloud-base, fully automated external attack surface management solution that provides continuous security, with extensive visibility and vulnerability detection.

Founded by hackers, we approach security from the outside in - always searching for new attack pathways that go wider and deeper. We focus our research on high impact vulnerabilities, helping to reduce noise, prevent alert fatigue and give you an advantage over your adversaries.

Ovalsec: Core Capabilities

Complete Visibility
Gain in-depth visibility into your external attack surface, including shadow IT and SaaS applications.
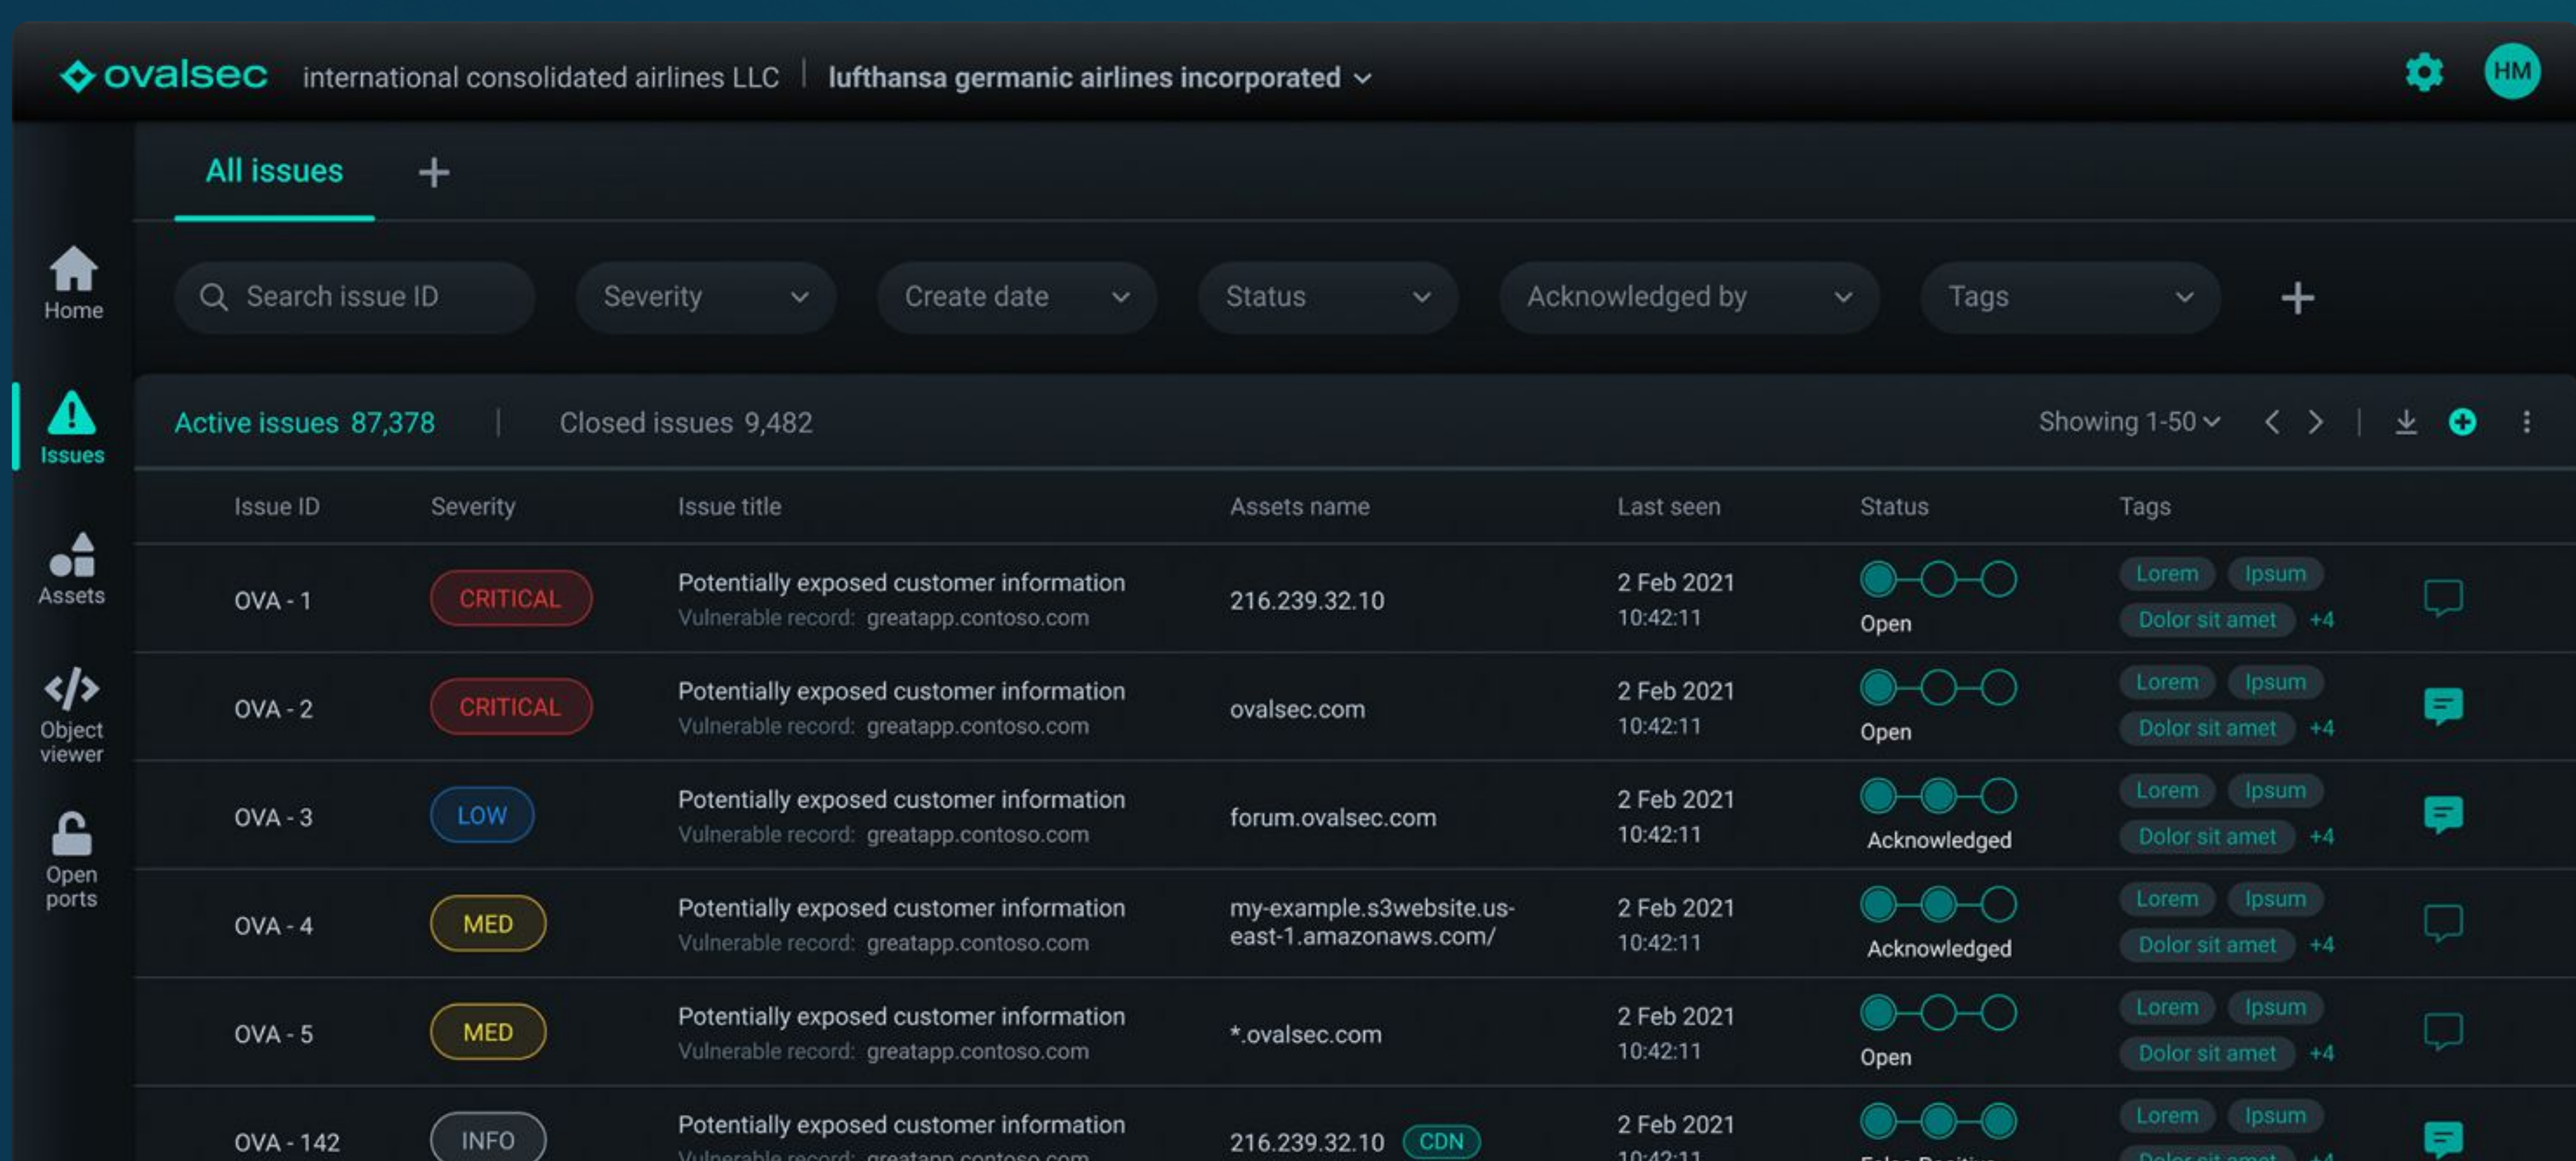

Continuous Security
Detect and mitigate vulnerabilities as soon as they emerge, since attackers are always on the lookout for exposed assets.

Smart Prioritization
Achieve clear visibility and focus on impactful security gaps, to help security teams avoid reporting fatigue.
