

METIS

ANSWERS TO ALL YOUR INTELLIGENCE QUESTIONS

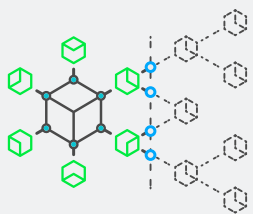

Fusion and Data Preparation

Using connectors, METIS analyzes information from all of your data and metadata, regardless of format or structure (video, audio, text, images, etc.) and starts combing through it to extract and index objects and entities, such as faces, email addresses, company names, people, phone numbers, locations and much more. All of these objects and entities are stored in a single data lake for easy future processing.

Analyst Investigation Suite - Data Exploration

METIS ensures inherent organizational knowledge and expertise is put to use, enabling analysts to explore, visualize and understand the data at their fingertips, in a matter of moments. Use the intuitive question-based UI to initiate an investigation – METIS does the rest. Employ a variety of analytical, data science, and visualization methods and algorithms like Pattern Detection, Facial Recognition, Network Learning, Anomaly Detection, and Trend detection.

Augmented Intelligence Suite - Predictive Analysis

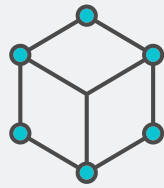

METIS robots take what they have uncovered and learned and automatically look for other changes, connections, and patterns that may be meaningful. The Augmented Intelligence Suite focuses in on suspicious activity as it emerges and explores what the data could mean in relation to everything else that is known.

Workflow Management – Dashboards, Reports, Audit Logs

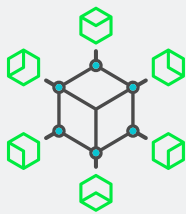

METIS makes it easy for analysts to manage the daily operations of their investigations. Secure collaboration, access controls, and audit logs ensure your investigations are fully under your control. The native Reporting workflow provides built-in tools to transform your findings into intelligence products for a variety of consumers.

METIS REVEALS

What's Happening

Instantaneously collects and thoroughly analyzes all your data to answer all your “who, what, when, where, and why” questions, at a speed and depth never before possible. If there is a needle in a haystack, METIS will find it, so you have all the details for your investigation.

What's Missing

Reveals what you don't know how to find or may not even know to look for. Continuously finds evidence, targets, secrets and meaning in the data that investigators should be aware of – based on your data, METIS tells you what else you should be looking at.

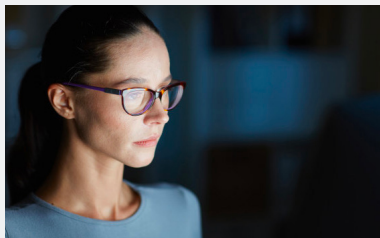

What's Next?

Anticipates new threats, looking for significant changes, emerging patterns, or behaviors that could indicate an imminent threat. METIS models past events and uncovers all relevant data points to give you fully formed insights into what might be next.

THE METIS DIFFERENCE

INSIGHTS YOU CAN COUNT ON

Get Results

Provides all the data points and intelligence you need to close out cases, shut down fraud, and stop criminal activity.

Achieve Early Warnings

Proactively identifies potential risks, so you can get ahead of threats and address them before they can do any damage.

Empower Everyone

Accelerates and amplifies the work of your teams, uncovering answers to the questions they have and those they didn't even know they should be asking.
