

I.T.P. NOVEX

TeleMonD

Covert Tracking and C4I System used by Law Enforcement, Intelligence and Army Forces, all around the globe!

GET YOUR TARGETS IN THE PALM OF YOUR HAND!

I.T.P. Novex is a leading provider of Covert Tracking and C4I Systems, used by Law Enforcement, Intelligence Organizations and Army Forces all around the globe.

The **TeleMonD** is a revolutionary **Surveillance System for Covert-Tracking after Target Vehicles** that facilitates location tracking and audio monitoring within moving target vehicles.

It enables surveillance experts to simultaneously monitor conversations taking place within a moving vehicle and track the location of vehicles over digital color maps, in real-time.

The system comprises various types of location units:

- Small, autonomous and weatherproof probe units, attached by magnets to the outside of the vehicle for covert tracking after Target Vehicles.
- Miniature units with microphones, designed to be mounted inside Target Vehicles; allowing simultaneous voice monitoring and location tracking.
- Miniature location units concealed on the body of the Organization's Agents, which enables to monitor the location of the Agents on the field, and to monitor the audio environment in the vicinity of the Agent.
- Location units designed for the Organization's Vehicles that enable to remotely monitor and operate different sub-systems of the vehicle.

The various location units of the system enable to display in one screen, the location of the Target Tracked Vehicles, the Organization's Vehicles and the Organization's Agents on the field.

The Tracking Operation can be monitored and controlled through several dedicated Command Stations from different locations simultaneously. The Command Stations can be operated from Personal Computers, Tablets or Smartphones.
