Lynx.MD | The healing power of data

A secure environment to share and analyze real-world clinical data

The Lynx.MD platform is a Trusted Data Environment (TDE) that enables healthcare organizations to provide secure access, share and promote new developments in a centrally controlled environment. The platform empowers collaborative analytics, research and development without compromising security or patient privacy.

Bring data and developers together.

The Lynx MD platform is a behind-the-firewall solution for hosting developers and data scientists in an isolated environment. Providers provision access to data with granular privacy controls and continuous monitoring. This means collaborators get the full range of capabilities they have locally, but in a secure and controlled environment.

Real-world patient data, de-identified in-place.

The Lynx Privacy Firewall uses patented privacy technology to enable users to work with real-world patient data—unstructured and structured—while keeping compliant with GDPR and HIPAA regulations.

Data exploration and benchmarking.

Lynx MD provides powerful yet easy-to-use tools to manipulate and analyze data for visualizations and benchmarking to improve clinical trial design, comparative analysis, and outcomes research.

Continuous data updates.

Integrate existing models with raw data from hospital systems and add up-to-date patient information for retrospective, real-world data analysis. Fresh data is automatically extracted and added to Lynx data catalogs ensuring researchers have the most accurate data.

Collaboration

Access millions of unstructured and structured datasets—X-rays, physicians' notes, prescriptions, hospital records and more— previously unattainable or difficult to access.

Data Governance

Data remains in the TDE. Organizations can manage permissions, sharing, and access from one location, making it easier to process third-party and internal data requests.

Privacy Protected

The Lynx Privacy Firewall offers military-grade security and ensures all data is HIPAA- and GDPR-compliant.

HIPAA COMPLIANT   **GDPR** COMPLIANT

Lynx MD is a secure data network and medical intelligence platform that gives the healthcare ecosystem the ability to quickly and safely access real-world health and patient data to accelerate diagnostic and therapeutic solutions and to improve patient outcomes.
