## SYSTEMATIC LITERATURE REVIEW

### PHOTOMEDICINE and LASER SURGERY

The efficacy of Phototherapy devices in the treatment of pain and wounds, is supported by a Systematic Review Literature, published in the Photomedicine and Laser Surgery magazine (Nov. 2018): **The B-Cure Laser device was cited 4 times out of 14 studies in the review**

**29%** of the patients in the literature review received B-Cure Laser therapy treatments

### THE LANCET

"We show that LLLT reduces pain immediately after treatment in acute neck pain and up to 22 weeks after completion of treatment in patients with chronic neck pain".

(December 2019)

## HOW DOES B-CURE LASER WORK?

Low-level laser therapy (LLLT) (also known as cold laser) is a laser beam that acts on the surface of the skin and at the same time penetrates deep into the tissue with no heating effect and without damaging the skin.

- Stimulates cell activity & strengthens cell signals that relieve pain, fight chronic inflammation and accelerate wound healing
- Releases endorphins that relieve pain
- Increases the production of ATP that accelerates wound healing and fights chronic inflammation
- Stimulates blood and lymph flow that reduce edema and accelerate wound healing
- Increases the formation of collagen & elastin, that accelerates wound healing
- Increases efficiency of the body's natural immune system

## WHAT ARE THE BENEFITS OF LASER THERAPY?

Proven efficacy

Non-toxic

Non-invasive

Easy to apply

No known side effects

Cost-effective

## MARKET SURVEY\* SHOWS SIGNIFICANT DECREASE IN INTOLERABLE PAIN

**60%** of the patients who had suffered intolerable pain (8-10 NRS), experienced a significant pain decrease to bearable pain

**70%** of the patients were satisfied with the device

**A sample of 300** B-Cure Laser patients were randomly selected out of 10,000 B-Cure Laser patients, to participate in an independent market survey
