

Karyotype Without Boundaries

CytoCloud Karyotype Cloud Application

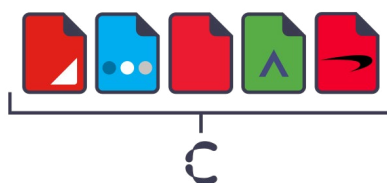

CytoCloud is a location-independent application that enables cytogeneticists to remotely analyze, review and report Karyotype cases, captured using any microscope, using a standard web browser.

CytoCloud Highlights:

Fully Featured Karyotype Application

CytoCloud is an easy-to-use solution for Karyotype cases review, analysis and report that can be performed from any location using any computer.

Freedom of Choice

Compatible with images captured by any imaging software and microscope models.

Collaboration Made Easy

Assign cases to specific users; share cases with external Experts; streamline the lab workflow with tools such as automated status email notifications.

Karyotype Made Simple

Effortless Setup

Start using CytoCloud in your laboratory within 5 minutes of registration. Cross-platform compatibility, from any web browser

Scalability

Supports independent individual users or entire laboratory team.

Security

SSL encryption with user permission-based authentication.

Quick Commands

Share cases/metaphase analysis with other users at a click of a button.

Automated Reporting

Download case reports, including score sheets and CSV reports, as well as Karyograms, classified and fast counted metaphases.

Cloud Storage

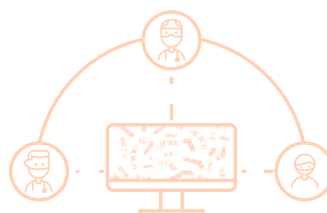

Optional long-term storage of cases.

CytoCloud Application

Remote Analysis

Laboratory personnel can carry on with the analytical workload from home using any computer with no need for any software installation

Expand Laboratory Services

Expert consultation / Karyotype analysis services to other laboratories

Academic Education

Cytogenetics training and certification
