

# Koalys Contact

## Mobile Audiometer

Hearing screening is not as accessible as it should be. This practice is in need for reliable measurement solutions that do not break down, could be used by non-hearing care experts, work faster, manage background noise and are more affordable.

## Koalys launches the mobile screening audiometer

Koalys Contact performs pure tone tests within the scope of humanitarian missions, schools, clinics, pharmacies and other retail points for lead generation.

Powered by our cloud based software, this screening solution requires only a calibrated headset and a smartphone. It is robust and reliable, has quick and automated testing protocols and can be operated by anyone.

Cost reduction

# Koalys Confirm

## Smart Mobile Audiometer

Occupational physicians, GPs, Pediatricians and other health practitioners are facing day to day challenges in regards to hearing care. They are in need of a robust solution to perform complete and accurate assessments, while being more efficient in treating patients in multiple locations.

## Koalys unveils the smart mobile audiometer

Koalys Confirm is a powerful solution to perform pure tone and speech tests. It is portable, connected and cloud based. Its fast protocols, self testing and pediatric approach create higher efficiencies and efficacy. This smart mobile audiometer is equipped with a video otoscope and requires only a calibrated headset and a tablet.

It is perfectly designed for occupational hearing care, GPs and pediatricians looking to perform a comprehensive diagnostic.

It is also well suited for advanced and fast screening in humanitarian programs, schools, clinics, pharmacies, and other retail points for lead generation.

Pediatric approach

# Key Features

## GENERAL

- Digital & cloud based solution on tablet
- Full integration with Noah and other information systems
- Multi languages

## AUDIOMETRY

- Pure Tone tests
- Speech tests
- Automated & assisted modes
  - Air conduction
  - Video Otoscopy
  - Speech in noise
- SRT/Speech Discrimination Testing
  - Pediatric speech testing
  - Self mode tests
- Background noise monitoring & alerts
  - Smart and fast protocols
- Results output: full diagnostic
  - In depth questionnaires included in protocols

## DATA & REPORTING

- Web based patient database & dashboard
  - In depth analysis reports
- Viewer access to Expert platform
  - Users admin
- Multiple users/Multiple Sites
  - Campaign management

# Koalys Consult

## Professional Hearing Care

Traditional audiometers no longer keep up with the current challenges of hearing care. They are expensive, require space and infrastructure, rely on analog hardware, and provide only a partial and superficial outlook on the patient's hearing deficiencies.

## Koalys introduces the 1<sup>st</sup> comprehensive web platform for hearing care

Digital and mobile, Koalys Consult enables ENT physicians and audiology professionals to perform advanced diagnostics, get deeper insights, and gain efficiencies and efficacy.

Powered by our cloud based software, the web platform requires only digital transducers and a computer or tablet. Koalys applied unique tests and intelligent protocols within the platform to improve the depth of the examination and the overall patient care.

This solution is destined to professionals who wish to improve their reputation, enhance their brand image and gain substantial competitive advantage.

# Koalys Connect

## Advanced Digital Health Solutions

In today's world, access to hearing care is limited. The major trends that created the need to improve it are: increase of aging population, expansion of rural areas/medical deserts, lack of Audiology professionals & ENT physicians, long waiting times for appointments and overall high costs of hearing care.

## Koalys brings hearing care to anyone anywhere

Our state-of-the-art Tele-Audiology platform empowers ENT physicians and audiologists to perform a complete and accurate examination within the realm of a remote consultation. This end to end solution could be integrated within an existing tele-medicine platform as an additional module, deployed as a stand alone kiosk, or be used as a mobile clinic for fitting.

Extended reach
