

Babysense™ 7

Babysense™ 7

The original non-contact baby breathing monitor

Original since 1991

FOR BABIES SAFETY AND PARENTS PEACE OF MIND

The responsibility is enormous - But the opportunity to make a difference is even more so

ABOUT BABYSENSE:

Babysense Breathing Monitor was developed because caretakers cannot easily provide the 24 hour surveillance of an infant that is necessary in view of the dangers that may face infants in hospitals and at home during their early stages of development.

Babysense 7 is a highly sensitive non-touch device that monitors and detects even the slightest baby's breathing movements through the mattress during sleep. It gives an alert to parents/caretakers if the infant's breathing stops or becomes irregularly slow.

Homecare Unit

PRINCIPLE OF OPERATION:

Babysense constantly monitors an infant's breathing movements and irregularities in breathing. The monitor sounds an alarm and emits a visual signal alerting to check the baby if no breathing movement is detected within 20 seconds or if the breathing rate slows to less than 10 breaths per minute.

FEATURES: (Homecare Unit)

- Auditory and visual (red light) alarm is activated if movements stop or become irregularly slow.
- Two highly sensitive sensors cover the entire crib area without touching the baby.
- Hidden connecting wires.
- Suitable for infants from birth.
- Easy one-button activation.
- The passive sensors are totally safe and emit no radiation of any kind that may harm the baby.
- Operates on 4 AA batteries (not included)

How it works (home use):

The control unit is connected to sensor pads placed between infant's mattress and crib or bed base. The included Control Unit holder attaches to the crib bottom so that no wires are exposed to the baby's environment.

What parents say:

"This product saved my baby's life. I don't know what would have been if we didn't have this monitor. As a mother of 2 and pediatric nurse, I think everyone should purchase this monitor."

SAFE, PROVEN TECHNOLOGY USED AROUND THE WORLD

Medically Certified
MDD 93/42/EEC

Hospital Unit

FEATURES: (Hospital Unit)

- Babysense has more than 25 years of experience throughout Europe, Japan, Australia, USA, Israel and other countries worldwide.
- Clinically proven and medically certified.
- Big rectangular sensor pad is optimally adopted for hospital cribs, placed under the mattress without touching the infant.
- Suitable for all basically healthy newborns in maternity wards.
- Easy one-button activation.
- The passive sensor is totally safe and emits no radiation of any kind that may harm the baby.
- The control unit features power indication LED
- Operates on 4 AA batteries (not included)

Certification:

Babysense is CE certified as a Class IIb Medical Device in Europe (93/42/EEC) and is listed as a Medical Device as per Ministry of Health in Europe, Israel, Japan, Korea, Australia and other countries worldwide.

Tech Specs:

- Requires 4 AA Alkaline Batteries (not supplied)
- 2 round sensor pads size 8.5 inches (21.6 cm)
- Power consumption approx. 1mA
- Battery life approx. 6 months using high quality alkaline batteries
- Alarm volume typically 85dB SPL at distance of one meter from control unit
- Illumination typically 2mCD

How it works (hospital use):

The monitor is supplied with a special installation fixture, optimally adopted for hospital cribs.

What Medical Professionals say:

“Thanks to the monitoring we were repeatedly alarmed and the child was saved and brought to the hospital on time.”

Head Physician, Pediatric Ward, NsP
Dunajská Streda

“The device has helped identifying 3 cases of apnea. This prevented the secondary hemodynamic disturbances. False alarms were not detected.”

Chief Neonatologist of Department of Health of Moscow

ABOUT US:

The original under-the-mattress monitor was developed and patented by Hisense Ltd company in 1991. It was the first-to-market non-touch motion sensor technology, know under the trade mark Babysense.

Hisense Ltd. possesses a solid expertise in developing and producing quality baby movement monitors, meeting the stringent requirements and needs of both the institutional and private market.

Babysense monitors are proven and trusted on the global markets and have helped protecting millions of infants worldwide.

Babysense is present in 35 countries around the world through its subsidiaries and exclusive international distributors.

ABOUT SIDS:

Babysense is a vital measure of baby's protection, giving parents a distinct advantage in coping with threats of respiratory distress and breathing cessation, which may be related to S.I.D.S. - Sudden Infant Death Syndrome. It is a leading cause of death among infants up to one year of age, which strikes without warning, requiring prompt medical intervention. SIDS is impossible to predict and modern medicine has not yet come up with means of care or solution.

Without Babysense breathing monitor, a parent would have to be in the room constantly and even then, a cessation in breathing might go unnoticed.

AWARDS:

Babysense has received numerous parenting awards.
