

I Am Not Alone

Transforming complex health data into real-time, actionable insights

Who We Are

As technology plays such an increasingly critical role in every aspect of healthcare, the development of digital solutions is mandatory for healthcare providers to assess and treat their patients, whether physically or remotely, to provide the best care for them.

For this reason, IMNA Solutions has created a patented, highly secured data collection and patient management platform. The robust eCare cloud platform uses BI and deep learning capabilities to collect, extract, and analyze patient healthcare information from multiple sources. By turning unstructured data into real-time actionable insights, it helps providers tailor their care for chronic patients, improves personalized health care, Patient-Reported Outcomes (PROs), and clinical decision support, all while reducing administrative tasks & costs and enhancing higher revenues.

The eCare leading-edge platform, which includes the telehealth provider dashboard and the ListenCare patient mobile App, fundamentally improves the quality of chronic treatment so that providers can spend more time focusing on what matters most – delivering the best care for their patients and improve their quality of life.

The platform also supports clinical trials via a comprehensive telehealth program that monitors, engages, and communicates with participants from their homes' comfort and safety. It follows participants 360° throughout their clinical trial lifecycle, all while meeting strict regulatory requirements and minimizing gaps in participants' relations.

This exclusive and unmatched capability to support both clinical studies and chronic care is unique to IMNA. It allows researchers to use a joint database with built-in inclusion and exclusion information, saving the most valuable time and resources.

Who We Help

Healthcare Providers

Providers get the most clinically relevant information about their patients, exactly when they need it.

Patients and Caregivers

Simple reminders, educational content, and actionable feedback for patients and their caregivers who seek to improve the quality of care and manage their health actively.

Our Solution

360° Patient View for Data Driven Insights

360° patient view via IMNA's innovative eCare Platform. The eCare platform monitors patients to identify irregularities, evaluate treatment plan progress, and flag early symptoms of complications to care teams.

Powerful Benefits

60% Reduction of administrative load and paperwork, allowing clinics to see 8-10 more patients a day without taking on more overhead.

Remote patient monitoring increases the potential to **reduce in-office visits by 18%** and prevent readmissions.

Embedded telehealth capabilities and automated patient notifications **prevent missed appointments & no-shows**, saving valuable time, resources, and money.

Real-time patients' health data allows **timely intervention by the care teams** and reduces chances to develop complications & comorbidities.

Superior Features

Scans, test results, reports, and medical records are all **easily consolidated, allowing max. operational efficiency**, and reducing documentation time.

Seamless integration with electronic medical record platforms. Fully customizable, single-entry data platform.

Central data **visualization dashboard and patient-friendly mobile application**. Patient risk scoring and automated near-to-real-time risk alerts.

Various digital communication options **improve patient engagement and adherence** to desired treatment protocols.

Collection of patients' data via multiple sources such as smartphones, wearable devices, PRO's, and medical devices.

Elimination of error-prone manual data management and **identification of issues as they occur**, and not at the end of the treatment or trial.

Simple implementation with multiple CPT remote care codes, chronic care codes, and transitional care codes.

Caregivers such as parents or guardians **can access the system to assist fill in the patient's info** and follow up actively on health conditions & treatments.

Exceptional Security

Uncompromised patient safety above all – **highly secured and patented communication technology**, preventing breaches and cyber attacks.

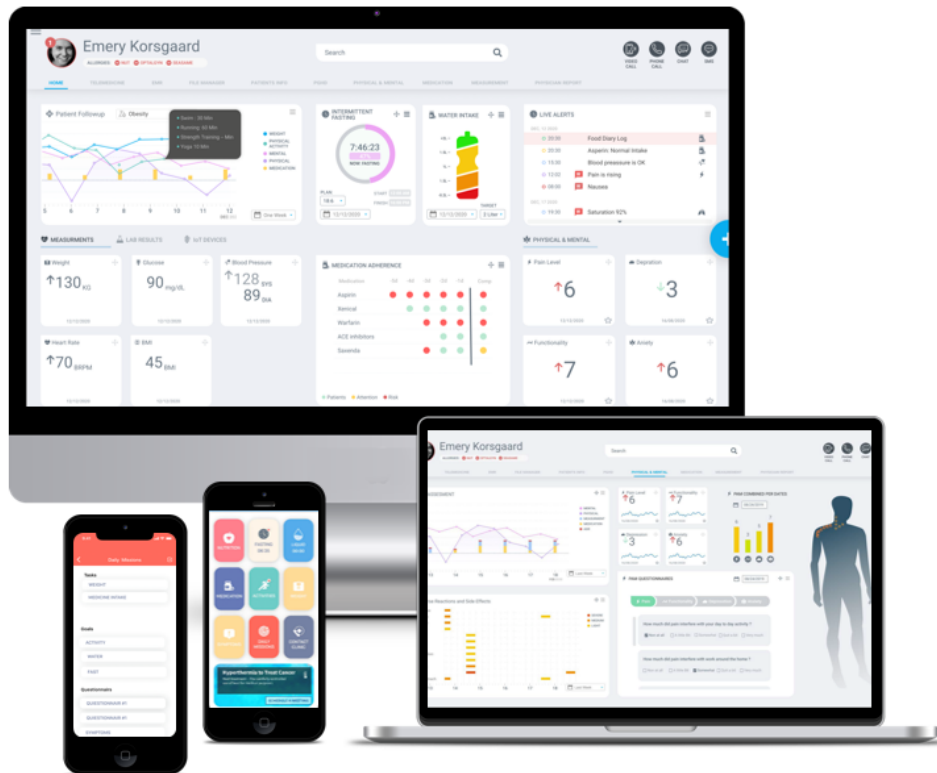

Fully certified by strict international HIPAA and GDPR standards. Complies with FDA's guidelines for conducting clinical trials during the COVID-19 pandemic.

COVID-19 business continuity program – allowing care teams to engage with low to medium risk patients and high-risk patients from the comfort and safety of their homes, saving bed capacity.

About Us

360° Patient View for Data Driven Insights

IMNA Solutions, founded in 2014, is a software development company with a mission to help providers tailor their care, accommodate precise treatment outcomes, and provide self-management tools for chronic care patients.

Our purpose-driven team of renowned doctors, medical professionals, security specialists, and data scientists take a patient-centric approach to managing medical conditions for healthcare providers and patients, seeking to improve quality and level of care, all while reducing administrative tasks and costs.
