

ref. 52527

# REVERSIBLE RIGHT ANGLE AIR PNEUMATIC DRILL 3/8" 90°

## Function

The pneumatic right-angle drill is designed to bore a hole. However, while the traditional drill features a short handle and a long head, the right-angle drill has a long handle and a short head, set at 90 degrees with each other. As a result, the cutting bit is at a right angle with respect to the grip. More importantly, its configuration allows the operator to reach and drill holes in narrow spaces where the traditional drill could not.

## Advantages

- ✓ Body made of aluminum
- ✓ Light
- ✓ 90° head for easy work in places of difficult access

## Technical specifications

Air inlet	1/4"
Speed without load	1500 rpm
Precision-ground	3/8" (0,5 to 9,5mm)
Sizes	23*4.5*11 cm
