

52902

WALL CHARGER 7 KW, 32 A, FOR ELECTRIC CARS (SINGLE-PHASE)

TECHNICAL SPECIFICATIONS

Power	7KW
Working current	32A
Tightness / Sealing	IP66
Operating temperature	-25°C~+55°C
Working voltage	AC 230V/400V
Plug type	Monofásico/Single-phase, Tipo/Type 2
Dimensions (LxWxH)	295x195x70mm
Weight	4,90Kg

The device incorporates an LCD screen that displays all charging data in real-time, allowing users to have full control of the process. Additionally, the RFID card access control system ensures that charging can only be initiated with an authorized card, eliminating unauthorized use of the service.

Thanks to its self-regulating system, the charger intelligently adjusts the charging parameters according to the vehicle's specifications, ensuring fast, efficient charging without the risk of damage. Moreover, the charger automatically prevents charging failures and errors, guaranteeing a safe and reliable process.

ADVANTAGES

- **Automatic charging optimization:** Smart adjustment of charging parameters according to the vehicle's needs, maximizing efficiency and safety.
- **Self-diagnosis:** The integrated chip automatically fixes charging failures and errors, ensuring continuous operation without interruptions.
- **RFID card access control:** Only authorized users can start or stop the charging process, preventing unauthorized use.
- **Overload protection:** The system includes safety measures that protect both the vehicle and the charger from electrical overloads.
- **Easy installation:** The simplified design and included accessories make it easy to install the charger in any space, whether at home, in an office, or a commercial location.

CONTAINS

- Smart device with LCD screen + Power socket.
- Mounting accessories.
