# COOLING SYSTEM CLEANING MACHINE

## Description

This machine allows you to clean and refill the entire cooling system of the vehicle in a quick and efficient way. By generating pressure, it pumps the coolant throughout the system and cleans it of various deposits. It is compatible with different types of coolants.

The machine is connected to the vehicle's battery at 12V, and has an intuitive interface which, together with its touch screen, two pressure gauges and two displays to observe the state of the fluid, makes it very easy to use. Quick connectors, tubing and adapters are available for easy fitting to the vast majority of vehicles. It contains two 20-litre tanks, one for new coolant and the other for used coolant, both of which are emptied through the machine itself.

In circuits with the presence of rust or oil, the use of additives is recommended for greater cleaning power.

## Advantages

- ✓ Completely automatic
- ✓ With large LCD screen

## Technical specifications

Power supply	DC12V
Gauge range	0~2kg/cm <sup>2</sup>
Output hose length	2.5m
Input hose length	2.5m
New coolant tank capacity	20L
Old coolant tank capacity	20L
Screen size	7"
360° rotation casters	Yes
Weight	50Kg
Size	69*59*114cm

**Contains**

Case with adaptors
