ULTRASONIC PARTS CLEANER 30L

Description

This machine allows you to clean parts by emitting ultrasound. Through the "cavitation" process, these ultrasounds create microscopic bubbles in the cleaning liquid. The effect achieved is an exhaustive and precise cleaning of the parts to be cleaned. Therefore, this cleaner is especially suitable for cleaning parts with complex shapes.

It has a basket to place the pieces, as well as a timer and temperature regulator to adjust the cleaning mode.

Technical specifications

Ultrasonic power	600W
Heating power	500W
Tank capacity	30L
Ultrasonic frequency	40KHz
Timer	1~30 min.
Power supply	200~240V (50Hz)
Number of transducers	10
Heater	0~80°C
Material	Stainless steel SUS304
Tank dimensions	500x300x200mm
Dimensions	530x325x325mm
Weight	14.5Kg
