

OUR PRODUCT RANGE

JLC Group are a multidisciplined UK engineering company designing, installing and maintaining specialist systems ranging from bomb blast doors, intelligent access control systems, to fixed electrical ground power and supplying versatile electric vehicle solutions.

ALLIGATOR CABLE CARRIER

The second generation JLC cable carrier is designed to be the fastest method of getting ground power to aircraft arriving on stand, thereby reducing aircraft turn-around time, Co2, and noise emission. Taken annually, these are massive savings.

CABLES & AIRCRAFT SOCKETS

JLC Group manufacture output cables for all types of Ground Power Units (GPU's), Fixed Electrical Ground Power (FEGP) and Cable Carriers. All our cables are manufactured in-house, with a wide range held as stock for rapid dispatch.

GROUND POWER EQUIPMENT

We supply a range of solid-state, diesel driven and battery powered Ground Power Units (GPU), from 400Hz frequency converters to 28V DC GPU's. Working with leading ground power manufacturer ITW GSE to provide the best aircraft ground power solutions.

GROUND POWER CONNECTIVITY SYSTEM

Ground Power Connectivity enables you to get live Ground Power Status straight to your laptop. We can provide an advanced end-to-end connectivity solution, which revolutionises seamless real-time monitoring and instant alerts for your Ground Power Units.

BESPOKE WASTE BOWSERS

Our JLC in-house designed and manufactured bowers for fuel, oil and lavatory waste, tailored specifically for airside operations. Our innovative solutions are engineered to streamline the efficient removal and disposal of waste fuel and oil at airports.

BESPOKE MANUFACTURING

Our state-of-the-art, custom-designed aircraft wheel trolley, now operational. This was a collaborative design developed in close partnership with British Airways, the trolley is tailored to their precise specifications, ensuring a perfect fit for their maintenance needs.

ACCESS GATES & AUTOMATIC DOORS

This access control system is designed where safety and user comfort come first. The system consists of slim, elegant modules that support swinging glass panels that open according to the direction of transit and can be managed by any access control system.

ONE WAY SECURITY CORRIDORS

Our one-way security doors feature two interlocked doors that open automatically in the direction of traffic but, in the event of any movement in the opposite direction, an alarm will activate and the security door will close, preventing unauthorised movement.

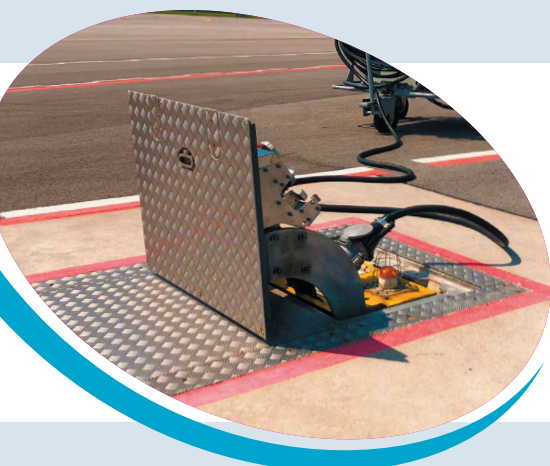

BLAST ENHANCED AUTOMATIC DOORS

Our blast enhanced Sliding Doors combine the key properties for blast protection with aesthetically pleasing and spacious design of any entrance door system. Providing high levels of blast protection, whilst maintaining the appearance of the build entrance and facade.

FIRE RATED DOORS & FIRE SHUTTERS

Our fire rated sliding doors combine the functionality and aesthetics of an automatic door with additional fire and flame retardant properties to maximise safety. Providing the fastest opening speed on the market, ideal where you have intense circulation of people.

PIT GROUND POWER SYSTEMS

Our range of Pit Systems meet your exact requirements. Because the 400Hz AC and optional 28V DC power supply is contained in an underground chamber, the minimal amount of space is taken up on the apron.

SERVICE, MAINTENANCE & TRAINING

JLC provide comprehensive service, maintenance & training tailored directly to your specific requirements. We also have the personnel to fully complete a new install without the use of Sub-contractors and are able to provide all the physical components required.
