

THE MESSAGE FROM THE PRESIDENT

<https://doi.org/10.4038/sljma.v27i1.5672>

It is my utmost pleasure as the 33rd president of the College of Medical Administrators of Sri Lanka, to send this message for Annual Academic Sessions of our prestigious college. In keeping with the World's trend and as the leaders of medical care governance, I selected an appropriate theme for my tenure in 2026, which is "Reshaping Healthcare Leadership through Artificial Intelligence". It is no doubt that all medical administrators should focus their attention on Artificial Intelligence (AI) because of the simple reason that AI offers powerful solutions to persistent healthcare challenges in numerous ways.

With my deep commitment to serving the college, and with the support of my efficient council members, we have fulfilled our duties by implementing the planned activities throughout the year so far. To name a few, we were able to conduct very advanced training Programmes on AI with the participation by renowned local and foreign AI experts.

As we have reached the conducting of the annual academic sessions, which is a main routine event organized by the college, we have organized important several symposia on prioritized subjects including practical AI sessions for our deserved membership and all invitees.

I take this opportunity to express my gratitude to my council and particularly to the academic committee for their excellent contribution and dedication to make this important academic activity a success.

Dr. Rukshan Bellana

President

The College of Medical Administrators of Sri Lanka

July, 2026
