

**Figure 1.** Participant flow, modified from Lau et al. (2023).

*Note.* There were more children in the adaptive working memory training condition due to a technical error by a team member not involved in data collection, which resulted in an additional 9 children aged 9-10 years and 2 children aged 11-12 years in the group.

**Table 1.**

*Split-half reliability indices (odd-even method with Spearman-Brown correction) for working memory measures at each timepoint Lau et al. (submitted).*

	<b>Split-half reliability indices</b>		
	Baseline	Immediately Post-Intervention	6-months Post-Intervention
Backwards Span Digits	0.84	0.88	0.86
Backwards Span Letters	0.81	0.86	0.82
Following Instructions Objects	0.65	0.55	0.71
Following Instructions Letters	0.32	0.59	0.61
N-Back	0.89	0.87	0.85
