Supplementary file 2: Matrix of themes across interviews. The matrix shows the distribution of themes across the interviews 1 to 8. The numbers per cell show how often a theme code was used in that interview transcript, e.g. the code for theme 1 was used zero times in interview A and six times in interview B. Grayscales are use to highlight the distribution, with darker shades representing a higher number of mentions of a theme and lighter shades representing a low number or no mention of a theme.
