Get the Full Guide Vault →

 Includes checklists, scripts & source-backed insights

YOU WILL LEARN

- ☒ What you'll build
- ☒ Step 1 —  Know STAR and when to use it
- ☒ Step 3 —  Extract competencies from the job ad
- ☒ Platforms & tools
- ☒ Step 2 —  Research the role and company
- ☒ Step 4 —  Inventory your raw material

What you'll build

A complete, reusable STAR story bank and practice system you can adapt to any job interview. You'll research a role, mine the job ad for competencies, convert your experiences into measurable STAR stories, practice on video, and follow up with credibility.

- 1 A role-targeted STAR story bank in Sheets
- 2 8+ concise, metric-backed STAR answers
- 3 AI-refined wording without sounding robotic
- 4 Practice recordings for 60–90 sec delivery

▶ MODULE 03

Step 1 — 🎯 Know STAR and when to use it

STAR = Situation, Task, Action, Result. Use it for behavioral questions, resume bullets, and cover letters. The goal is clear context, decisive actions, and measurable impact—fast.

Tip

Avoid vague claims (e.g., “completed labs”). State what you did, how you did it, and the result.

► MODULE 04

Step 2 — Research the role and company

Collect the mission, recent news, product lines, and who you'll work with. Scan the job ad and team profiles to see repeated themes and language.

EXPLORE REAL POSTINGS

Zapier Careers

Use as a live example to practice STAR targeting. ↗

LinkedIn

Research company pages and interviewer profiles. ↗

Tip

Messaging a hiring manager on LinkedIn after applying is common and often buried. Research there, but consider email for targeted outreach.

LinkedIn — where you'll do this

► **MODULE 05**

Step 3 — Extract competencies from the job ad

Turn the posting into 8–12 target competencies (e.g., customer empathy, documentation, process improvement) and a keyword set. Use this to guide which stories you'll tell.

Platform	What to do in this step
ChatGPT	Paste the job ad. Ask for 8–12 behavioral competencies, role keywords, and 3 sample metrics to demonstrate each.
Claude	Paste the job ad. Request a compact list of competencies, must-have keywords, and 3 example results tied to those competencies.
Google Docs	Copy the ad, highlight verbs and outcomes, then list competencies and related keywords in a bulleted summary.

Platform	What to do in this step
Google Sheets	Create tabs: 'Competencies' (name, description, top keywords) and 'Stories' (to map later).
Loom	Not needed here.

Tip

Mirror posting language. If it says "member support, healthcare, organization, problem-solving," use those exact words where truthful.

Google Docs — where you'll do this

► MODULE 06

Step 4 — Inventory your raw material

List 10–15 moments across work, internships, school, volunteering, and side projects. Capture who, what, and why it mattered. Don't wordsmith yet.

Tip

No experience? Use coursework, team projects, hackathons, volunteering, and personal builds—call out time management, collaboration, resilience, and communication.

► MODULE 07

Step 5 — Build your STAR bank in Sheets

Create a Google Sheet with columns: Story Title, Competency, Situation, Task, 3 Actions, Result (+metric), Tools/Keywords, Reflection (what you learned), Link/Evidence. Add one row per potential story.

Tip

Recruiters scan in an F-pattern. Front-load the Result in the first line of any bullet you eventually move to your resume.

► MODULE 08

Step 6 — Quantify outcomes

Attach at least one number to each Result: time saved, accuracy, NPS/CSAT, revenue protected, defects reduced, volume handled, SLA improved. Use ranges or before→after where exact data isn't public.

Tip

If you can't state metrics, you're invisible. Example-only quant: "Processed 500+ records weekly at 99% accuracy (source-reported benchmark)." Never fabricate.

► MODULE 09

Step 7 — Turn experiences into tight STAR bullets

Aim for 2–4 sentences total: 1 for Situation+Task, 1–2 for Actions (start with strong verbs), 1 for Result with a metric. Keep jargon light and impact clear.

Tip

Replace generic claims with specifics: what you built, how you investigated, the playbook you followed, and the measured outcome.

► MODULE 10

Step 8 — Tailor stories to the role

Map 2–3 stories to each top competency from Step 3. Reorder bullets so the most role-relevant, highest-impact stories show first. Keep a variant per company if needed.

Tip

Build for the next role, not just the last one. Manually sort stories to fit the posting instead of relying on default chronology.

► MODULE 11

Step 9 — Refine with AI (optional, controlled)

Use AI to improve clarity, tone, or brevity—not to invent content. Provide your draft STAR and ask for cleaner wording, consistent tense, and a 30s/60s version.

Platform	What to do in this step
ChatGPT	Paste your draft STAR. Ask for trim to 120–160 words, keep human voice, return JSON fields: Situation, Task, Actions[], Result(metric), 30s, 60s.
Claude	Provide draft and role keywords. Request concise rewrite with measurable Result and two timed versions (30s/60s) as JSON.
Google Docs	Manually tighten: shorten setup, elevate verbs, move metric into first Result clause.
Google Sheets	Store final versions (30s/60s) in separate columns for quick practice.
Loom	Not here—use next steps to record practice.

PROMPT – GENERAL STAR BUILDER

You are helping me refine a STAR answer. Return JSON with keys: storyTitle, competency, situation, task, actions (array of 3 concise bullets), result (include metric), version30s, version60s.

Context: Role = [ROLE]; Posting keywords = [KEYWORDS]; Tone = concise, human, no buzzwords.

Draft STAR:

[SITUATION]

[TASK]

[ACTIONS]

[RESULT]

Rules: keep facts I provided, do not invent, tighten wording, front-load the Result. Output JSON only.

PROMPT – SALES/BD STORY

Goal: Refine a Sales/BD STAR.

Return JSON: storyTitle, competency, situation, task, actions[3], result (with revenue or pipeline metric), version30s, version60s.

Inputs: Product = [PRODUCT]; Deal size = [DEAL_SIZE]; Objection = [OBJECTION];

Action highlights = [ACTIONS]; Outcome = [OUTCOME].

Tone: crisp, numbers-first. No fluff. Output JSON only.

PROMPT – CUSTOMER SUPPORT STORY

Refine a Customer Support STAR.

Return JSON: storyTitle, competency, situation, task, actions[3], result (CSAT/SLA/handle time), version30s, version60s.

Context: Tools = [TOOLS e.g., Zendesk, Intercom, JSON/API]; Volume = [TICKETS_PER_DAY]; Constraint = [CONSTRAINT].

Draft: [DRAFT]. Keep it human; output JSON only.

PROMPT – FRESHER/STUDENT PROJECT

Create a STAR from a student project/internship.

Return JSON: storyTitle, competency, situation, task, actions[3], result (grade, time saved, users reached), version30s, version60s.

Context: Course/Club = [CONTEXT]; Team size = [TEAM_SIZE]; Tools = [TOOLS]; Problem = [PROBLEM]; Outcome = [OUTCOME]. Output JSON only.

PROMPT – CONFLICT/STAKEHOLDER RESOLUTION

Refine a STAR about conflict resolution.

Return JSON: storyTitle, competency, situation, task, actions[3] (indicate technique: compromising/problem-solving/smoothing/accommodating), result (quantified), version30s, version60s.

Draft: [DRAFT]. Output JSON only.

Tip

Use structured output (JSON) for predictable fields. Don't ask AI to write whole documents—template yourself and have AI tighten small parts. Stronger models yield better edits but may cost more.

► MODULE 12

Step 10 — 🎤 Practice out loud on camera

Record 30s and 60–90s takes of each story in Loom. Re-watch: trim setup, slow down, reduce fillers, and highlight the metric earlier. Keep the best links for quick refreshers pre-interview.

Tip

When screen-sharing profiles, scroll occasionally—static pages look like screenshots and feel less engaging.

Step 11 — Nail “Tell me about yourself”

Structure a 60–90s STAR-lite opener: 1) Who you are now (role focus), 2) 1–2 aligned STAR highlights (Actions + Result), 3) Why this team/mission. Practice until smooth and natural.

Tip

Not preparing this answer leads to a shaky start. State clearly what kind of employee you’ll be and how you add value.

Step 12 — Prepare stories for tough themes

Pre-build at least one STAR each for: conflict resolution, handling pressure/volume, learning quickly, going above and beyond, and a mistake you corrected. Tag each to a target competency.

Tip

Pick the resolution technique (compromising/problem-solving/smoothing/accommodating) that best serves project objectives—not personal preferences.

Step 13 — Build warm context before interviews

After applying, connect with three people: recruiter/hiring manager, someone in the role, and a cross-functional leader. Ask thoughtful questions; use multi-channel to increase visibility.

TEMPLATE — INFORMATIONAL INTERVIEW DM

Subject: [Personalized hook for [Name]]
I'd be very interested to get your expert opinion on this industry and where it's going, could you spare some time?

TEMPLATE — STAKEHOLDER OUTREACH EMAIL

Subject: Quick question about the [ROLE] role
Hi [Name],
I noticed you may be close to the [ROLE] hiring at [Company]. I'm applying and would value 10 minutes to learn what success looks like on your team. I'll come prepared with 2–3 focused questions and keep it brief.
Thanks,
[Your Name]

Tip

Recruiters are often junior and overloaded—aim for the hiring manager or their peers, and use multiple channels (email + LinkedIn) to avoid getting buried.

► MODULE 16

Step 14 — Prep for video interviews

Test tech, frame yourself at eye level, and keep notes off-camera. Open with your tailored “About me,” then deliver STAR stories, referencing relevant conversations or connections you made with the team.

Tip

Provide concrete examples—solving hard customer issues, staying calm under pressure, going above and beyond—rather than generic traits.

► MODULE 17

Step 15 — Deliver crisp STAR answers in the room

Use 1–3–1 flow: 1 short Situation/Task, 3 decisive Actions, 1 Result with a metric and a quick reflection tied to their priorities. Ask a clarifying question up front if the prompt is broad.

Tip

Read the job description deeply before you walk in—otherwise your examples may miss the competencies they're actually scoring.

► MODULE 18

Step 16 — Follow up with results reinforcement

Send a concise thank-you email the same day. Reaffirm one problem they raised and one matching Result from your story bank. Offer to share a brief write-up or process doc if helpful.

TEMPLATE — POST-INTERVIEW FOLLOW-UP

Subject: Thank you — [ROLE]

Hi [Name],

Great speaking today. You mentioned [TEAM PRIORITY]. Here's a quick parallel from my background: [RESULT WITH METRIC] after [KEY ACTION]. I'd be glad to share a 1-pager on the approach if useful.

Appreciate the time,

[Your Name]

Tip

Be eager but not pushy—short, specific, and tied to their priority beats long summaries.

► MODULE 19

Step 17 — Retrospect and iterate your bank

After each screen or onsite, log the questions you got, what landed, what didn't, and update your STAR bank. Promote the highest-impact stories to the top of your list for that company.

Tip

Blasting many applications without the right skills or niche focus rarely gets traction—tighten your stories against the target competencies.

► MODULE 20

Mistakes to avoid

NOT READING THE POSTING

You'll miss the exact competencies they score against.

SKIPPING 'ABOUT ME' PREP

A weak opener sets the tone for the entire interview.

VAGUE OR UNMEASURED RESULTS

Every story needs a concrete outcome; add metrics.

LETTING AI WRITE EVERYTHING

Template yourself; use AI to tighten small parts only.

ONE-CHANNEL OUTREACH

Only DMing on LinkedIn gets buried—use email too.

OVERSTUFFED PROFILES

Too much unfocused info makes you look mismatched.

VOLCANO ANSWERS

Overly heated or defensive stories signal risk; stay objective.

► MODULE 21

Salary Estimate

\$24–\$30/hr

Park Aid customer support associate (source-reported)

\$20–\$22/hr

Seresti Health enrollment specialist (source-reported)
