#### Abstract

This cross-sectional study was conducted among general population in India. Total number of participants was 147. Among them $53 \%$ were female and $47 \%$ were male. $54 \%$ of the participants drank 4 to 6 glasses of water per day. $91 \%$ of them take a bottle of water at their workplace. $36 \%$ of the participants reported about their source of knowledge from parents/ relatives/ friends. There are some factors linked with water intake some complex mechanisms behind water homeostasis and the effect of water intake on health.

KEYWORDS: water, Hydration, Dehydration, water intake.

## INTRODUCTION

Water is essential for life from the time that primeval species ventured from the oceans to live on land, a major key to survival has been prevention of dehydration. ${ }^{[1]}$ Water is a vital component of all living cells and extracellular fluids. Water acts as a solvent, regulates body temperature, and helps in food digestion and regulation of acid-base balance. ${ }^{[2]}$ Hypohydration is defined as a body water deficit caused by acute or chronic dehydration. ${ }^{[3]}$ Recognising the difficulty of
diagnosing dehydration that it is typically due to underlying disease processes and that it can develop very rapidly. ${ }^{[4]}$

## MATERIALS AND METHODS

This cross-sectional study was conducted by administering a pre validated questionnaire via Google forms to the participants whose age is 18 years and above, of either gender. The statistical evaluation was done.

## RESULTS AND DISCUSSION

1. GENDER

| GENDER | NUMBER OF PARTICIPANTS | PERCENTAGE |
| :--- | :---: | :---: |
| FEMALE | 78 | $53 \%$ |
| MALE | 69 | $47 \%$ |
| TOTAL | 147 | $100 \%$ |

## 2. EDUCATION

| EDUCATION | NUMBER OF PARTICIPANTS | PERCENTAGE |
| :--- | :---: | :---: |
| 12th Pass | 97 | $66 \%$ |
| Graduate | 33 | $22 \%$ |
| Post -graduate | 17 | $12 \%$ |
| Grand Total | 147 | $100 \%$ |

3. HISTORY OF DIABITIES MELLITUS

| HISTORY OF DIABITIES MELLITUS | NUMBER OF PARTICIPANTS | PERCENTAGE |
| :--- | :---: | :---: |
| YES | 145 | $99 \%$ |
| NO | 2 | $1 \%$ |
| TOTAL | $\mathbf{1 4 7}$ | $\mathbf{1 0 0 \%}$ |

4. HISTORY OF HYPERTENSION

| HISTORY OF HYPERTENSION | NUMBER OF PARTICIPANTS | PERCENTAGE |
| :--- | :---: | :---: |
| YES | 9 | $6 \%$ |
| NO | 138 | $94 \%$ |
| TOTAL | 147 | $100 \%$ |

5. HISTORY OF CHRONIC KIDNEY DISEASES

| HISTORY OF CHRONIC <br> KIDNEY DISEASES | NUMBER OF <br> PARTICIPANTS | PERCENTAGE |
| :--- | :---: | :---: |
| YES | 1 | $1 \%$ |
| NO | 146 | $99 \%$ |
| TOTAL | 147 | $100 \%$ |

6. HISTORY OF HEART DISEASES

| HISTORY OF HEART DISEASES | NUMBER OF PARTICIPANTS | PERCENTAGE |
| :--- | :---: | :---: |
| YES | 3 | $2 \%$ |
| NO | 144 | $98 \%$ |
| TOTAL | 147 | $100 \%$ |

7. NUMBER OF GLASSES OF WATER

| NUMBER OF GLASSES OF WATER | NUMBER OF PARTICIPANTS | PERCENTAGE |
| :--- | :---: | :---: |
| 1-3 GLASSES | 6 | $4 \%$ |
| 4-6 GLASSES | 80 | $54 \%$ |
| 7-10 GLASSES | 59 | $40 \%$ |
| OTHERS | 2 | $1 \%$ |
| TOTAL | 147 | $100 \%$ |

8. NUMBER OF TIMES ONE TAKES FRUIT JUICE

| NUMBER OF TIMES ONE TAKES | NUMBER OF <br> FRUIT JUICE | PERCENTAGE |

| NO | 7 | $5 \%$ |
| TOTAL | 147 | $100 \%$ |

## DO YOU THINK, DEHYDRATION CAN BE PREVENTED ?

30. DO U KNOW ANYTHING ABOUT ORAL REHYDRATION SOLUTIONS (ORS)?

| DO U KNOW ANYTHING ABOUT ORAL REHYDRATION SOLUTIONS (ORS)? | NUMBER OF PARTICIPANTS | PERCENTAGE |
| :---: | :---: | :---: |
| YES | 142 | 97\% |
| NO | 5 | 3\% |
| TOTAL | 147 | 100\% |

31. CAN YOU ABLE TO MAKE ORAL REHYDRATION SOLUTIONS (ORS) AT HOME?

| CAN YOU ABLE TO MAKE ORAL |  |  |
| :--- | :---: | :---: |
| REHYDRATION SOLUTIONS (ORS) AT HOME? | NO. OF <br> PARTICIPANTS | PERCENTAGE |
| YES | 129 | $88 \%$ |
| NO | 18 | $12 \%$ |
| TOTAL | 147 | $100 \%$ |

In our study total number of participants was 147. Among them $53 \%$ were female and $47 \%$ were male. $6 \%$ among the participants we're suffering from hypertension. A combination of pre-clinical, observational, and interventional studies point to a direct link between low water intake, increased anti diuretic signal concentration and metabolic dysfunction. ${ }^{[5]} 1 \%$ of the respondents had history of chronic kidney disease. Repeated episodes of acute kidney injury related to dehydration. ${ }^{[6]}$ Dehydration, a condition that

characterises excessive loss of body water, is well known to be associated with acute renal dysfunction. ${ }^{[7]}$ Among the participants $57 \%$ gets dehydrated in winter season. Cardiovascular mortality associated with temperature may be attributable to hemodynamic changes linked to dehydration. ${ }^{[8]} 99 \%$ of the participants agreed regarding the association between hydration and brain performance - a consistent mood listening during mild dehydration. ${ }^{[9]}$ Among the participants $96 \%$ of them agreed that more hydration is needed during pregnancy and breastfeeding.

Studies have shown that the incidence of chronic dehydration during pregnancy affects the weight and length of the child at birth. ${ }^{[10]}$ Hypernatremic dehydration predominantly appears in breastfed neonates can cause serious complications such as convulsions, permanent brain damage and death. ${ }^{[11]}$

## CONCLUSION

The maintenance of fluid and electrolyte balance is the key to prevent and treat dehydration. An approach to dehydration including an earlier rather than delayed diagnosis benefits the patient and the healthcare team.
