

DON'T  
**STAY HYDRATED**

# A QUICK HISTORY OF WEB RENDERING

# Good ol' plain HTML

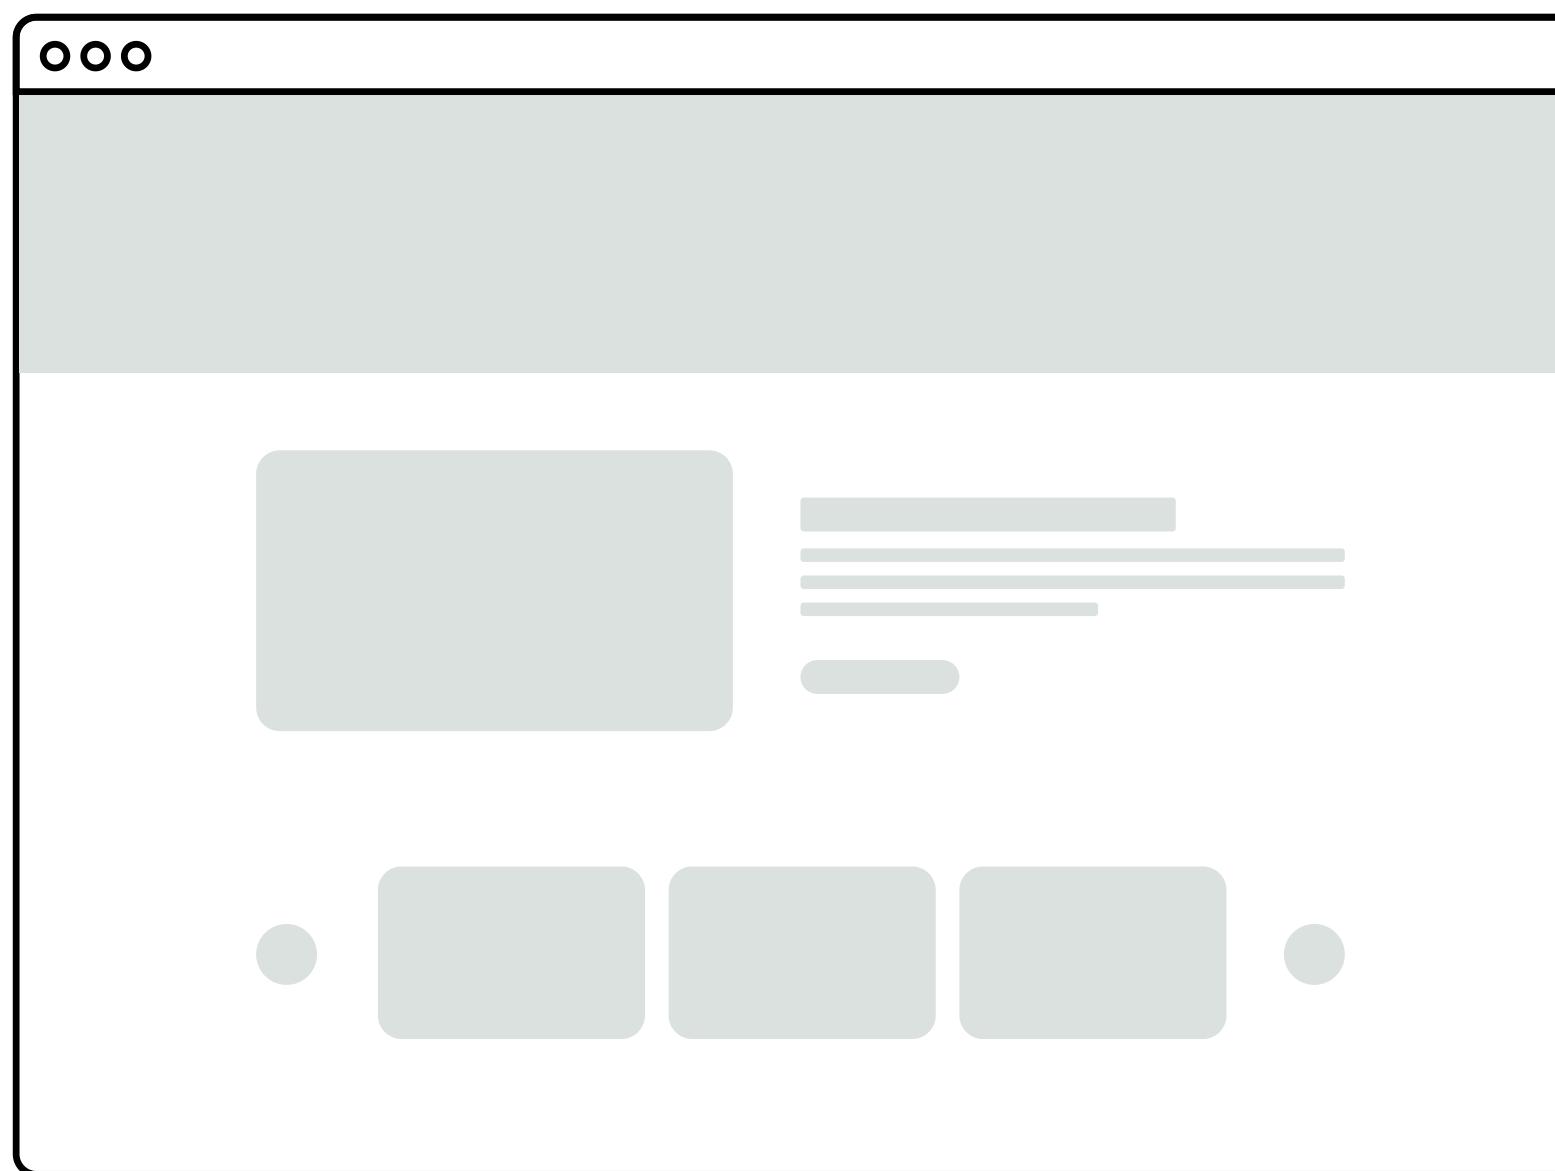

Good ol' plain HTML & iframes

# Good ol' plain HTML & iframes

# Introduction of Javascript & jQuery

# Introduction of Javascript & jQuery

Server returns HTML &  
browser renders it

# Introduction of Javascript & jQuery

Server returns HTML &  
browser renders it

Browser executes JS  
targeting specific  
elements

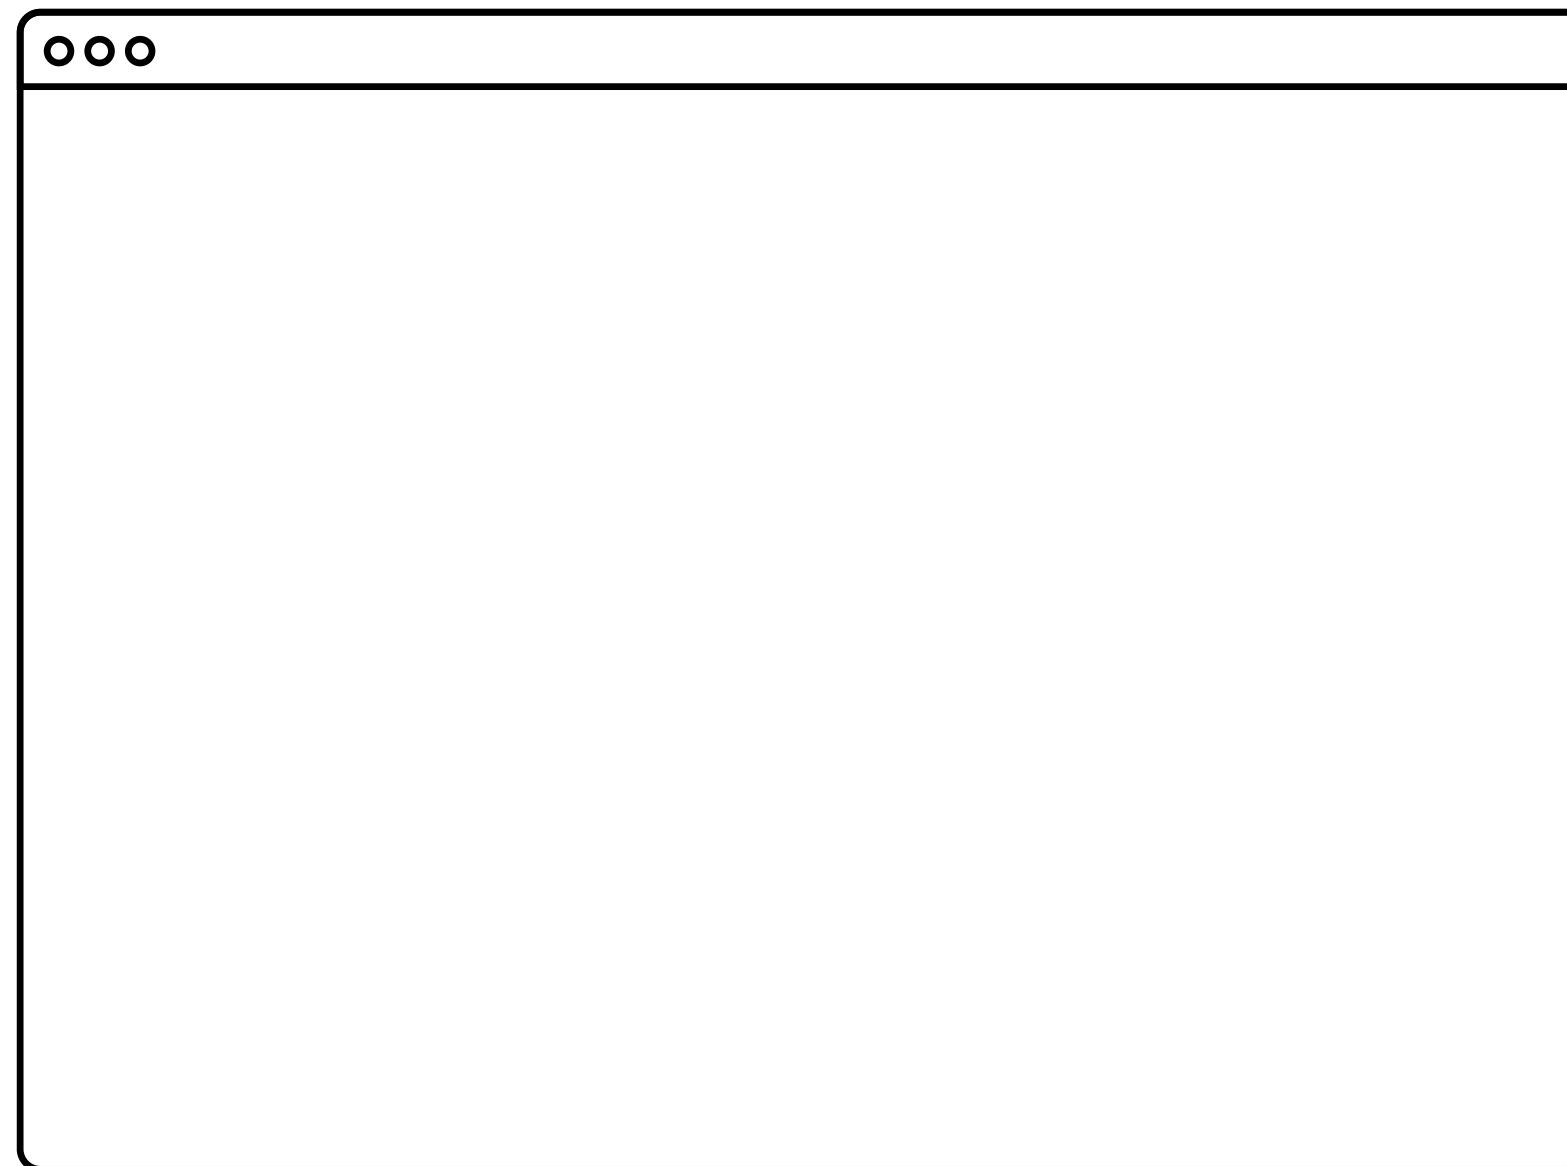

# Single page applications

# Single page applications

Server returns empty  
“container”

# Single page applications

Server returns empty  
“container”

Browser loads JS

# Single page applications

Server returns empty  
“container”

Browser loads JS

Javascript creates and  
injects DOM elements

GOING BACK TO  
THE SERVER

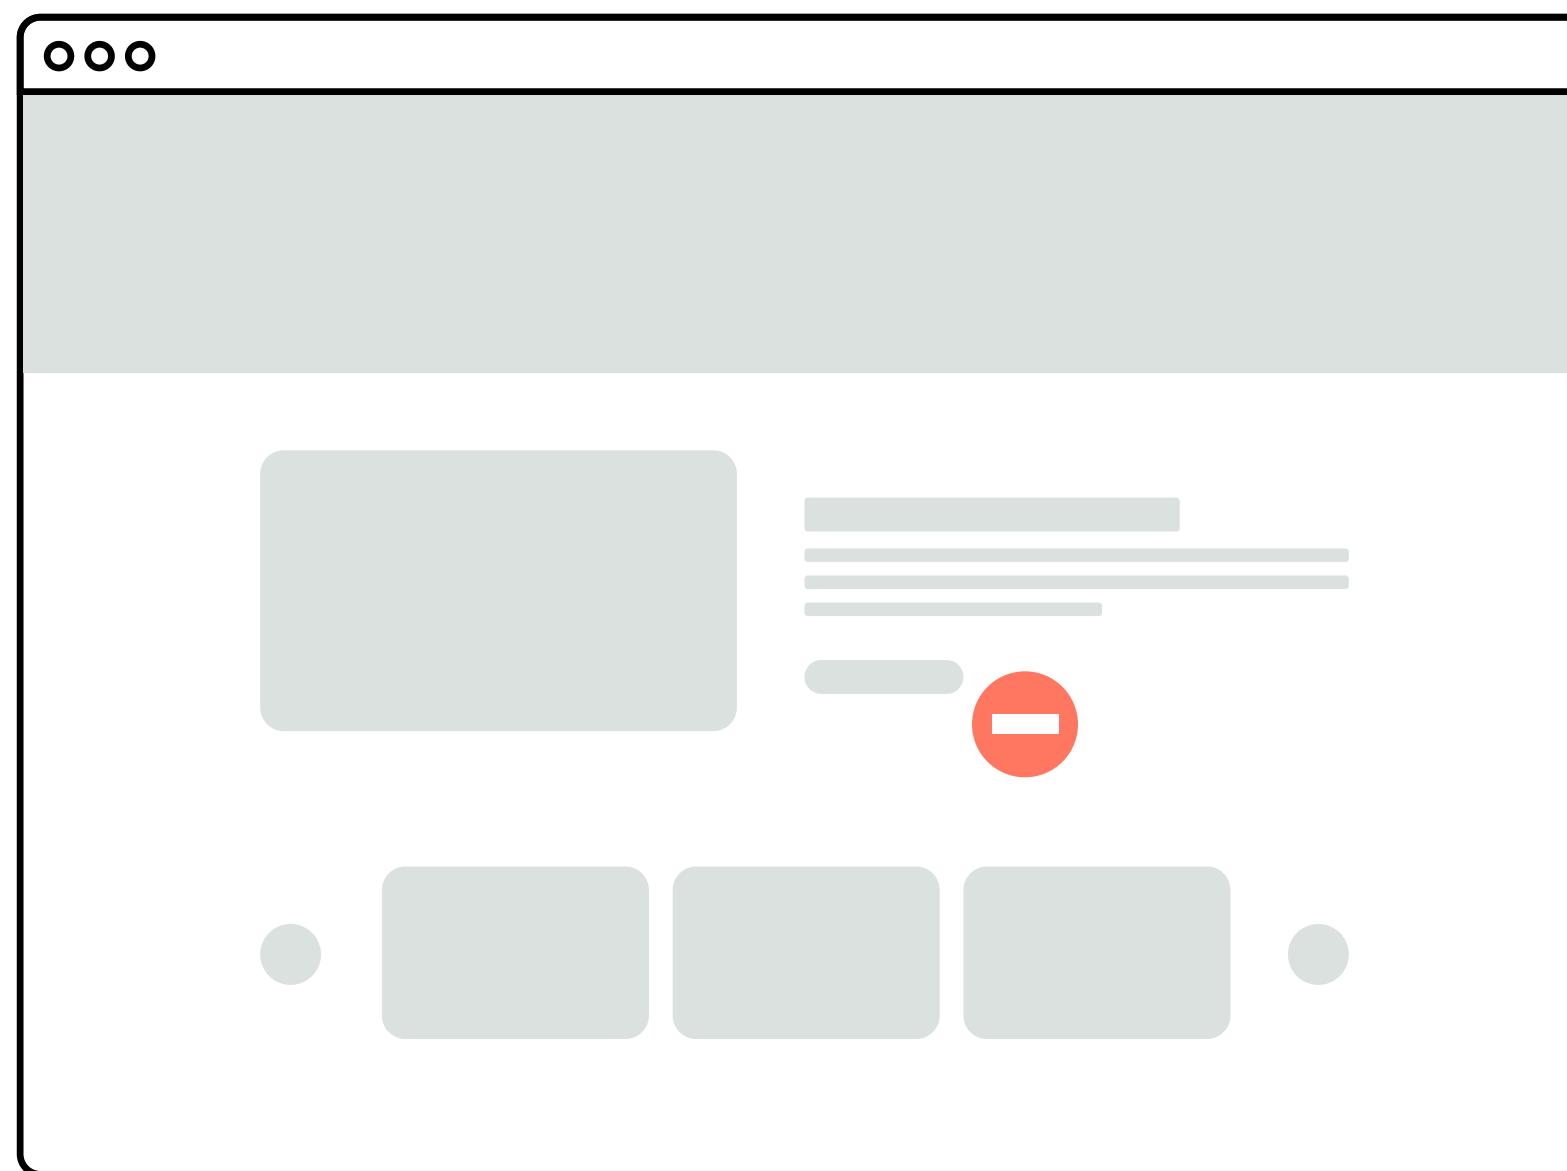

**SSG and SSR e.g. with Gatsby, NextJS, etc**

# SSG and SSR e.g. with Gatsby, NextJS, etc

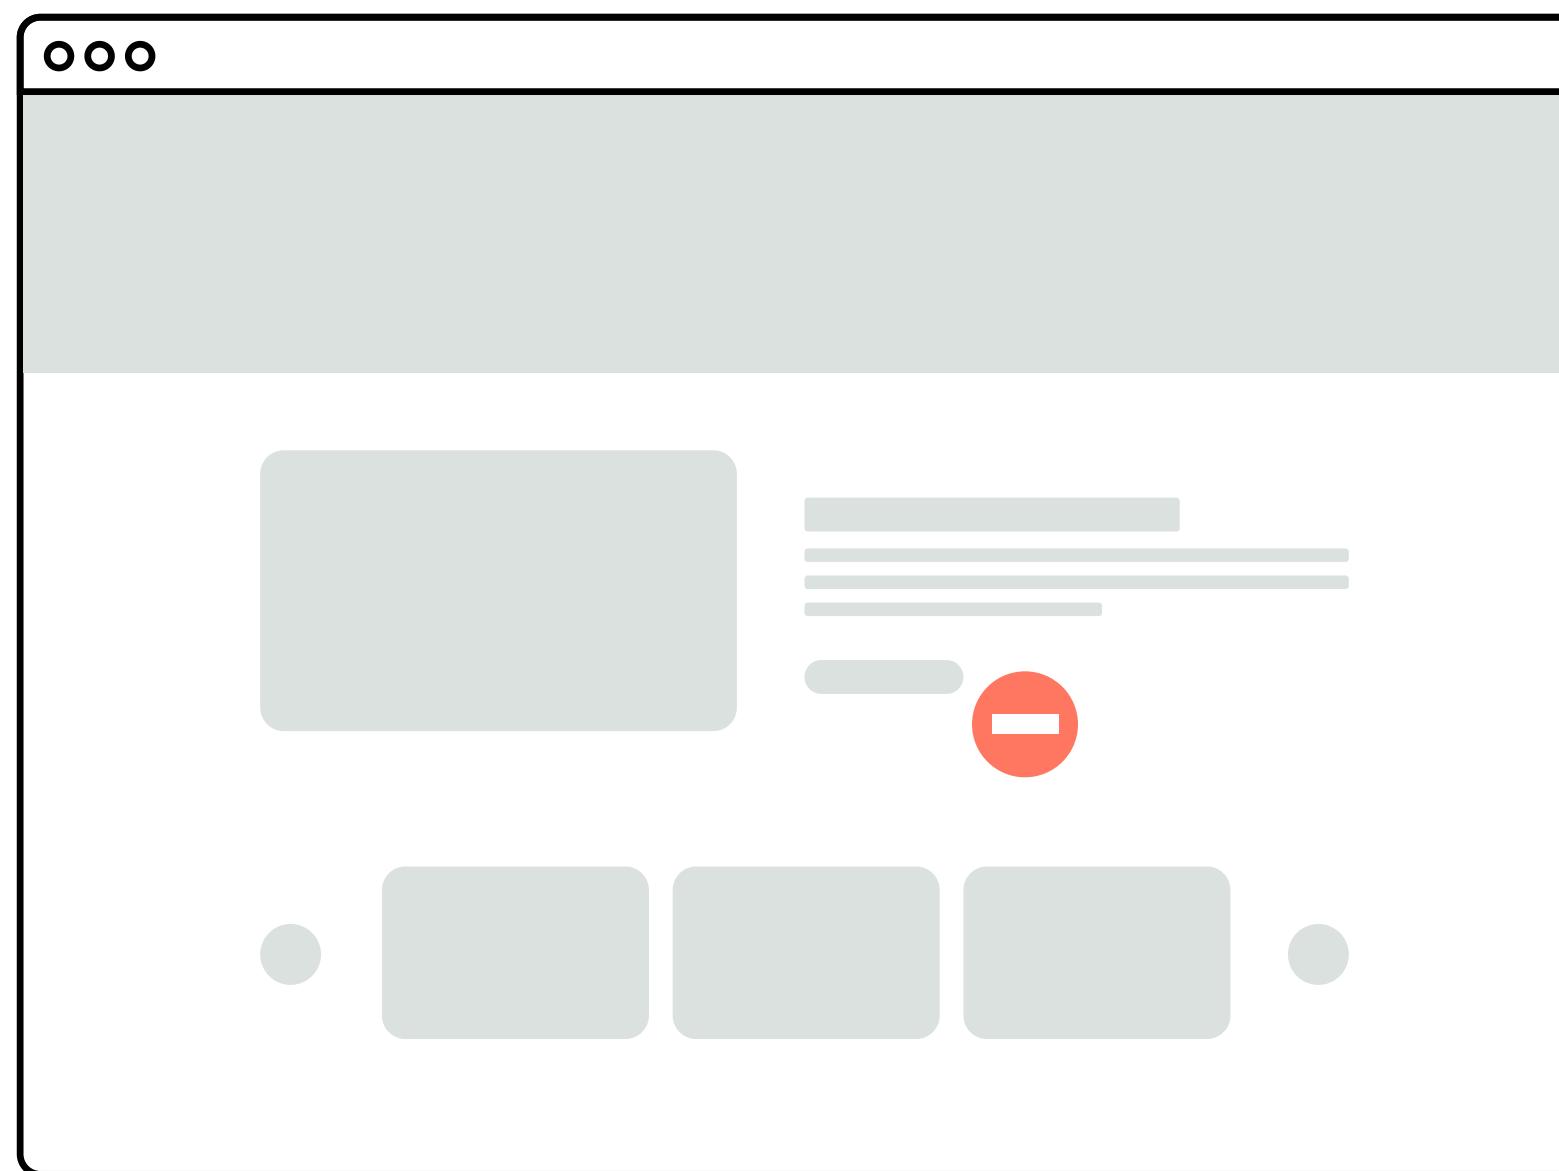

Server returns HTML &  
browser renders it

# SSG and SSR e.g. with Gatsby, NextJS, etc

Server returns HTML &  
browser renders it

# SSG and SSR e.g. with Gatsby, NextJS, etc

Server returns HTML & browser renders it

Browser loads JS

# SSG and SSR e.g. with Gatsby, NextJS, etc

Server returns HTML & browser renders it

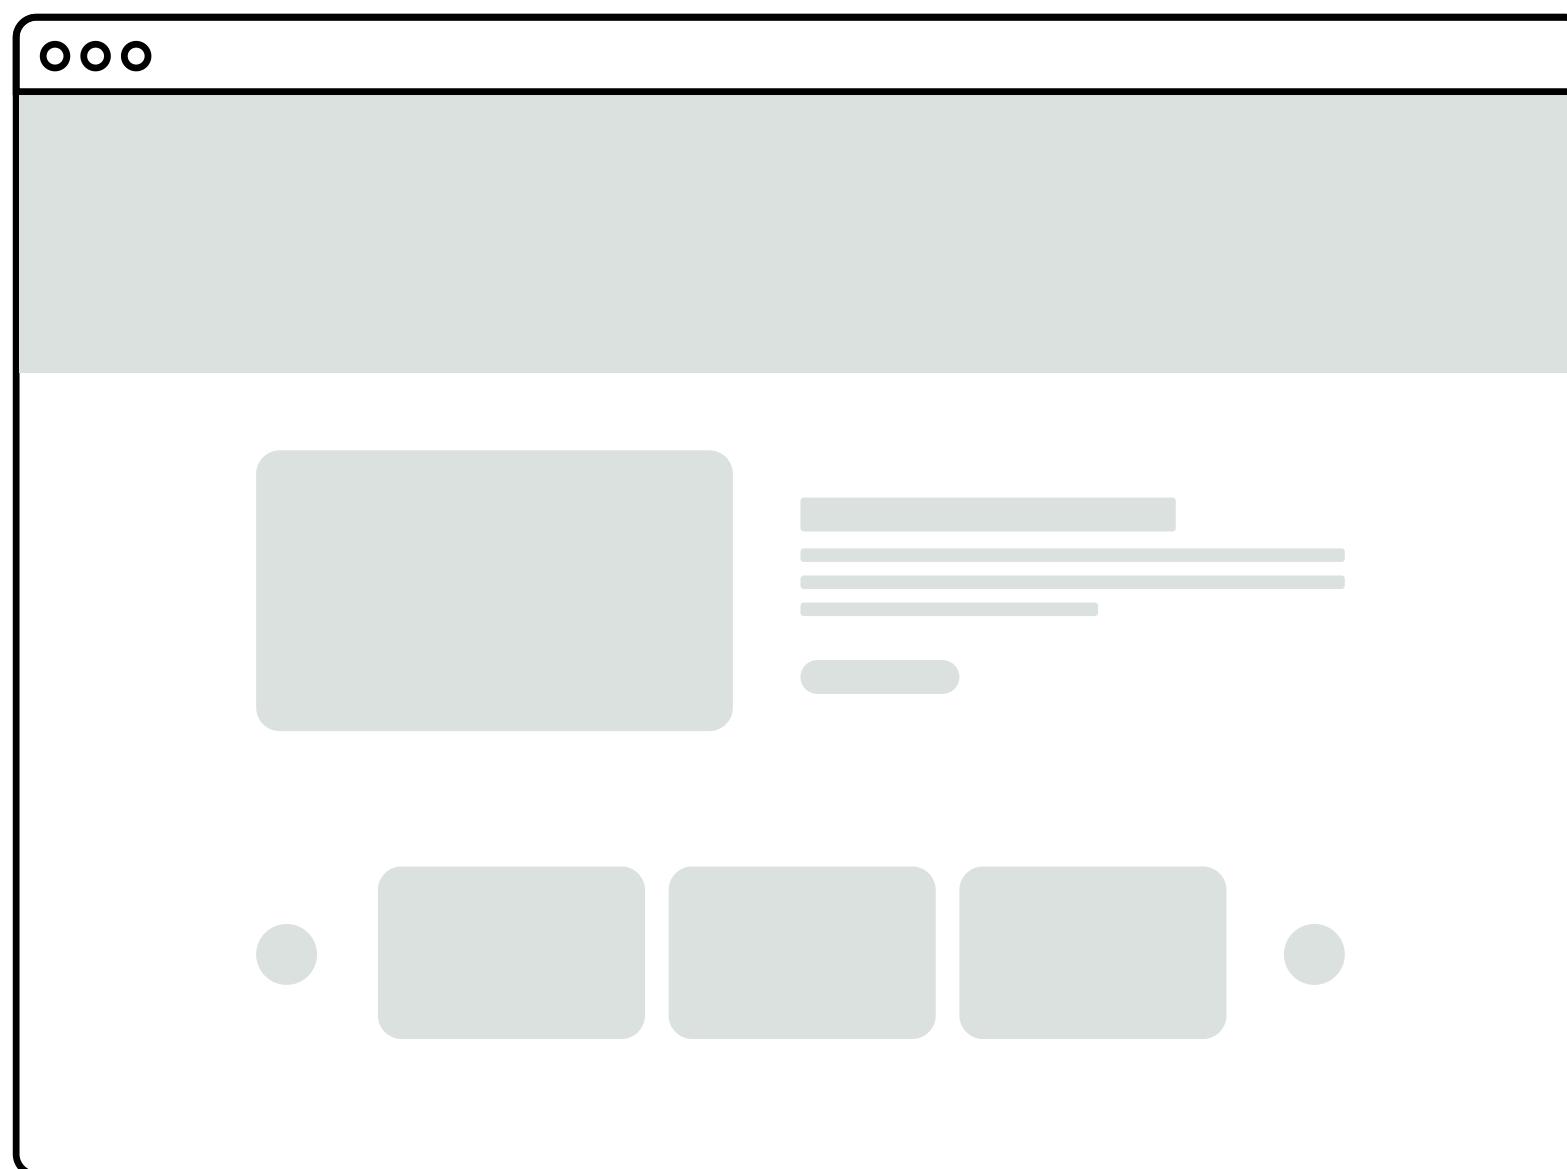

Browser loads JS

Javascript gets executed and creates virtual copy of the DOM to swap out content

THE SOLUTIONS -  
PARTIAL & NO  
HYDRATION

# React Server Components

# React Server Components

Server returns HTML &  
browser renders it

# React Server Components

Server returns HTML &  
browser renders it

Browser executes JS  
targeting specific  
elements

# React Server Components = *partial hydration*

Server returns HTML &  
browser renders it

Browser executes JS  
targeting specific  
elements

# Astro's concept of islands = **partial hydration**

Server returns HTML & browser renders it

Browser executes JS targeting specific elements

**Qwik = “zero” hydration**

# Qwik = “zero” hydration

Server returns HTML w/  
serialised state &  
browser renders it

# Qwik = “zero” hydration

Server returns HTML w/  
serialised state &  
browser renders it

Browser loads tiny  
framework JS

# Qwik = “zero” hydration

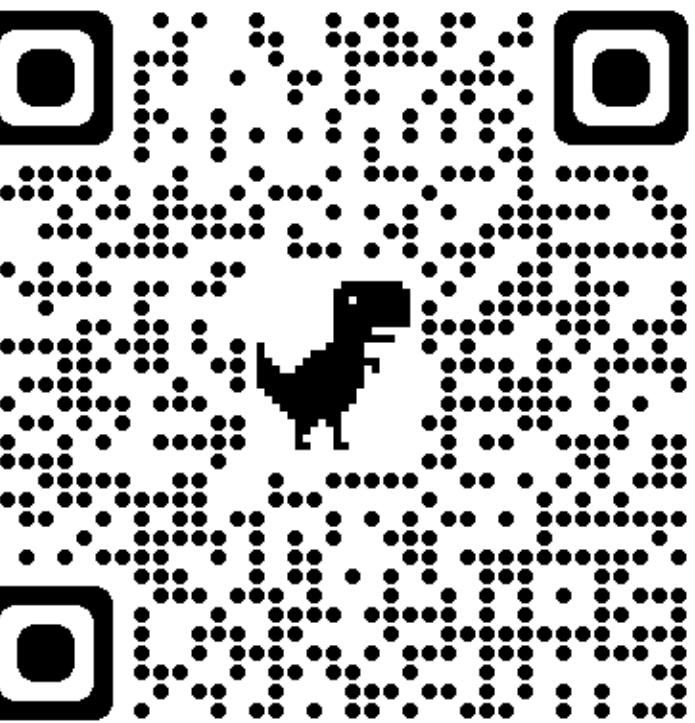

Server returns HTML w/  
serialised state &  
browser renders it

Browser loads tiny  
framework JS

Other JS is only loaded  
lazily or on demand

LET'S LOOK AT  
REAL CODE
