Public Drinking Water Notification

October 7, 2021

The Medway Board of Health and Medway Water/Sewer Department are issuing this public drinking water notification due to a supply shortage of Sodium Fluoride (fluoride). The Town's supply will be depleted this month and Town water will not be treated with fluoride for a period of time. Nationwide, drinking water suppliers are running into this problem due to supply chain issues with sourcing it. It is estimated the supply chains will open in 2022.

The lack of fluoride in the Town's water should not result in an immediate increase in tooth decay in the community. Residents interested in other ways to receive fluoride treatment may wish to contact their dentist.
