www.vi.genoacity.wi.gov
for full calendar

Shamrocks are three-leaf clovers, the most common type of clover. In fact, the word “shamrock” comes from the Irish word “seamróg,” and means “young clover.”

The only difference between a shamrock and a four-leaf clover is ... one leaf! But four-leaf clovers are so rare that only about one in 10,000 clovers have four leaves. So if you find one, you're considered lucky.

Don't
forget to

**REGISTER TO
VOTE**

Visit www.myvote.wi.gov to register to vote, request absentee ballot, update name or address.

10 GARDENING ACTIVITIES FOR MARCH IN THE MIDWEST

1. Sow or Transplant Cool-Season Crops

If you started your cool-season crops back in February, then you can transplant them from March through April if the threat of frost has passed.

2. Prepare Tools for the Season

Use a wire brush or steel wool along with 3-In-One Multi-Purpose Oil to clean metal tools such as shovels, trowels, and spades.

3. Attend a Flower & Garden Show

4. Divide Perennials

The process of digging up and dividing perennials will help them thrive in the long run. Overcrowded perennials often won't bloom as profusely and may develop diseases.

5. Cut Back Ornamental Grasses

Late-winter and early spring are good times to cut back ornamental grasses because they will begin their growing season soon.

6. Plant Roses or Remove Winter Protection

7. Plant Annuals for Early Color

8. Prepare for Weeds

9. Don't Prune Spring-Flowering Shrubs

If you have spring-flowering shrubs such as forsythia, quince, lilac, azaleas, or others, don't prune them. Pruning in late winter and early spring can cut off flower buds. The best time to prune spring-flowering shrubs is right after they bloom.

10. Plant for Butterflies

Butterflies such as monarchs need host plants as well as nectar for survival. Consider planning a butterfly waystation in your backyard or front yard.
