

EXECUTIVE SUMMARY

In 1977, SWWRPC staff and representatives from its five member counties conducted a thorough analysis of the region's transportation system. The report's goal was to: serve as a resource for the residents of southwest Wisconsin to use in analyzing transportation proposals; inform readers of the many varied and complex interrelationships evident in any transportation system; help determine where the emphasis should be placed in planning activities; and to provide a more comprehensive outlook when dealing with transportation problems.

In the intervening years, other transportation plans and reports have also looked at Iowa County and the region, resulting in many improvements to the transportation system.

This document is structured to provide historic context (see Map C.1 for early transportation routes in southwest Wisconsin) and to provide information on local issues within the transportation framework. Although many issues are presented in a regional context, the assertion made in the SWWRPC 1972 *Technical Report No. 4: Prospective for Regional Transportation Planning* holds true today: "It should be emphasized, however, that regional planning is not a substitute for local planning. On the contrary, regional planning is intended to strengthen local planning efforts by providing a more comprehensive base of information in a regional context in order to facilitate rational private and public decisions on the local level."

The advantage of using a regional context to inform local transportation planning is that the relationship to scale is reinforced. From this perspective, the Transportation Element provides historic and regional context, considers local transportation needs, and based on local input provides a 20-year jurisdictional plan that can serve as a resource guide and implementation tool.

Wisconsin State Statute 66.1001(2)(c)

(c) Transportation element.

A compilation of objectives, policies, goals, maps and programs to guide the future development of the various modes of transportation, including highways, transit, transportation systems for persons with disabilities, bicycles, electric personal assistive mobility devices, walking, railroads, air transportation, trucking and water transportation. The element shall compare the local governmental unit's objectives, policies, goals, and programs to state and regional transportation plans. The element shall also identify highways within the local governmental unit by function and incorporate state, regional and other applicable transportation plans, including transportation corridor plans, county highway functional and jurisdictional studies, urban area and rural area transportation plans, airport master plans and rail plans that apply in the local governmental unit.

Beginning on January 1, 2010, any program or action of a local governmental unit that affects land use shall be consistent with that local governmental unit's comprehensive plan, including ...
 (m) An improvement of a transportation facility that is undertaken under s. 84.185.

TRANSPORTATION POLICIES

The following are the transportation policies (not in order of priority) of the Town of Dodgeville.

1. **The Town will maintain safe and efficient roads that support residents, agriculture, tourism, and economic development.**
2. **The Town will work cooperatively with other governmental agencies to ensure efficiency and coordination of roads maintenance and planning.**

Town of Dodgeville transportation priorities will be

- **Aesthetics**
 - Consider nominating appropriate qualifying roads for the state's Rustic Roads program on a case-by-base basis.
- **Transit**
 - Work with City of Dodgeville and WisDOT to explore a Park-and-Ride lot.
 - Solicit input regarding paratransit services and ongoing review.
 - Interest in the development of a local taxi service.
 - Possible addition of bicycle lanes at Military Ridge Road and Survey Road (from Brue Road to USH 18).
- **Land Use**
 - Review & Update local design guidelines.
 - Coordination with WisDOT on planning for development.

TOWN OF DODGEVILLE

In reviewing the transportation survey responses that had been completed by residents, the Town of Dodgeville's Plan Commission identified the primary issues and concerns for this plan.

The most satisfactory aspects of the Town of Dodgeville's existing transportation system are

- that a large percentage of town roads are paved (60 of 71 total miles)
- relatively good geometric layout
- existing system blends well with environment
- most areas are capable of handling existing traffic loads

The least satisfactory aspects of the community's transportation system are:

- no public transportation
- traffic control—speeding, littering, tree and brush removal

The aspect of the community's transportation system that respondents felt was most important to improve was related to:

- public information on traffic and driveway permits
- need to hard-surface remaining gravel roads
- road alignment for maintenance and plowing (<5 percent of system)

In addition, Plan Commission respondents identified transportation projects or issues that they foresee in the jurisdiction:

- Ongoing: Be open to participating in future public transportation options.
- Consideration should be given to Deer/Vehicle Crashes including consideration of deer crossing signs in deer prone crossing areas.

The next section looks more closely at the locally identified transportation issues. In reviewing the transportation survey responses that had been completed by residents, the Town of Dodgeville's Plan Commission respondents ranked the following transportation issues as having the highest priority for meeting local needs (#1 is the highest priority ranking):

1. **Transportation safety**
2. **Agricultural-vehicle mobility**
3. **Connectivity with the larger transportation system**
4. **Freight mobility**
5. **Supporting economic development**
6. **Tourism (including preservation of rural views)**
7. **Recreational transportation uses**
8. **Mobility needs of the elderly and disabled**

These issues thread throughout the Town of Dodgeville's plan—including its housing, economic development, land use, and implementation elements. Although the scope of this plan is local, it recognizes that local planning is part of the mosaic that should inform WisDOT's vision and priorities for budgeting and planning. WisDOT also acknowledges the complexity of balancing these issues:

"Wisconsin's healthy economy has also caused increased commuter and commercial demand on local roads and streets. Much of the state's 100,000 miles of local roads are facing the same aging infrastructure needs as the state highways. Furthermore, an ever-increasing number of local roads are experiencing congestion problems as communities continue to grow. Because it is essential that state highways and local roads and streets work in unison, the state has to continue to provide funding to local units of governments to help support construction, improvement and maintenance of locally owned highways, roads, streets and bridges. As is the case with the state highway system, it is likely that demands on local roads and streets will continue to grow in the future (WisDOT)."

Like WisDOT, local governments grapple with these issues and constraints as they make decisions related to housing, development, schools, roads, and funding. A report entitled *The Evaluation of Statewide Long-Range Transportation Plans*, examined Wisconsin's Transportation Plans and concluded:

"Population growth alone is a challenge that is anticipated in many states. Wisconsin anticipates a 13 percent growth over the plan period [through 2020]. This will create additional demand on existing transportation facilities, along with requiring additional services. This need for services will be compounded by the fact that both its elderly and working age populations will be increasing, with their separate transportation needs" (prepared for the FHWA and US DOT, April 2002)."

2000 US Census for the Town of Dodgeville

Tables C.1 and C.2, drawn from transportation-related responses, is included because it provides some insights related to possible future needs.

- The age of residents is important—those under 15 do not drive; those over 62 may, at some point, be users of shared-ride transportation services. Data for Vehicles Available is also included.
- Employment Status and Work-at-Home numbers provide some perspective on commuting patterns, as does information on Commute Time and Time Leaving Home To Go To Work.
- Information on the Age of Housing Stock is included because housing construction yields increased trip generation and its impacts should be considered.

What future needs are indicated? How do they overlap? It can be difficult to answer these questions and it is more difficult without public input and participation. For WisDOT, this is not simply a goal—it's an obligation. As required by federal law, *"Environmental Justice"* requires public involvement efforts to reach out to minority and low-income populations.

Why? Because historically the interests of these groups have been ignored in transportation decision-making. In Iowa County a four-person household is considered to be *low-income* if it has a total annual income of \$18,100 or less/year. According to the 2000 U.S. Census, 7.3 percent of Iowa County's residents are in this income category and WisDOT is required to make every effort to ensure that their input helps to inform transportation planning decisions.

Table C.1 – 2000 US Census Data

POPULATION	T Clyde 287	C Dodgeville 4207	T Dodgeville 1501	T Eden 375	T Highland 770	T Linden 888	T Mifflin 635	T Mineral Point 916

9:00 to 11:59 a.m.	7.7%	7.7%	4.5%	1.9%	3.0%	2.0%	4.3%	6.6%
12:00 to 3:59 p.m.	6.3%	9.4%	4.9%	1.3%	4.4%	11.3%	5.1%	6.1%
All other times	11.9%	12.2%	9.5%	8.4%	18.0%	10.5%	17.0%	10.4%
HOUSING STOCK								
Housing constructed between 1990 to March 2000	11.4%	12.1%	27.1%	11.6%	16.9%	17.3%	14.8%	17.9%
1940 to 1989	27.2%	60.0%	41.7%	52.2%	39.4%	41.2%	34.2%	43.2%
1939 or earlier	61.4%	27.9%	31.2%	36.2%	43.7%	41.5%	51.0%	38.9%
VEHICLES AVAILABLE								
None	0.0%	5.8%	4.0%	1.4%	2.5%	3.8%	2.5%	0.9%
One	31.6%	37.5%	15.2%	19.6%	14.4%	22.1%	17.3%	16.6%
Two	26.3%	40.2%	52.1%	55.8%	50.7%	41.9%	51.0%	53.0%
Three or more	42.1%	16.5%	28.6%	23.2%	32.4%	32.2%	29.2%	29.5%
HOUSEHOLD INCOME								
Median reported 1999 household income (in dollars)	\$50,625	\$41,615	\$49,327	\$42,813	\$37,868	\$36,726	\$42,083	\$42,171

LOCAL TRANSPORTATION INFRASTRUCTURE & ISSUES

NOTE: This latter project is not a part of WisDOT's current 20-year planning vision, according to District 1.

The initial comprehensive planning survey yielded these responses from the residents of the Town of Dodgeville:

- Ninety-one percent agreed or strongly agreed that Iowa County's overall road network (roads, streets, and highways) meets the needs of its citizens.
- Eighty-nine percent agreed or strongly agreed that the condition of local roads in the Town of Dodgeville is adequate for intended uses.

Transportation Modes

Plan Commission respondents were asked to identify the transportation modes that currently use public infrastructure within the Town of Dodgeville (in addition to personal cars, trucks, and motorcycles). They are identified below with an **X**.

MODE		Used	Not Used
Travel	Carpooling	X	
	Para-transit (shared-ride, taxi)		X
Agriculture	Tractors	X	
	ATVs (all terrain vehicles)	X	
Recreation	Bicycles	X	
	ATVs	X	
	Horses	X	
	Snowmobiles	X	
Freight	Trucking	X	
	Rail		X
	Air		X

The Town of Dodgeville has 114.93 miles of roads:

- 43.67 miles of County Trunk Highways
- 71.26 miles of Local Roads

The most heavily trafficked is the small segment of the USH 151 corridor located in the southeastern corner of the Town of Dodgeville.

The USH 18 corridor connects east-west traffic from Prairie du Chein to USH 151 and Madison; it also connects east/west traffic to USH 61. The USH 18 corridor is classified on the County’s rural functional highway system as a: a Principal Arterial, a National Highway System (NHS) route, a designated passing lane corridor, and a designated long truck route.

Average annual daily traffic counts (AADT) on USH in the Town of Dodgeville (west of the City of Dodgeville):

Year 2003	7,435 (projected 10/2/2002)
Year 2022	9,660

Level of Service (LOS) for USH 18 (based on current conditions, as of 10/2/2002)

Year 2003	3.75 = LOS C
Year 2022	4.28 = LOS D

Level of Service (LOS) is a quantitative measure that refers to the overall quality of flow at an intersection:

- LOS A (1.00-2.00) = traffic moves freely
- LOS B (2.01-3.00)
- LOS C (3.01-4.0) = stable traffic, back-ups are beginning to occur
- LOS D (4.01-5.00) = lowest acceptable rating for an intersection
- LOS E (5.01-6.00)
- LOS F (>6.01) = traffic is extremely restricted, many times experiencing gridlock.

Low level of service rates, higher crash rates, substandard pedestrian and bicycle accommodations, and insufficient turn lane lengths are all indications of intersections that are over-loaded with vehicles. WisDOT data indicate that east of the intersection of USH 18 and STH 80 (located within the Village of Cobb), the crash rate exceeds the critical rate (i.e., one standard deviation above the average rate).

The USH 18 corridor west of Dodgeville was identified by Meta Manager Data as a possible passing lane corridor. To prevent the increase of conflicts, WisDOT has undertaken S. 84.25 access management. This allows only public road access to the corridor.

NOTE: WisDOT's Highway Improvement Program schedule for 2005-2007 indicates plans to replace pavement on the USH 18 corridor in Iowa County, west of Dodgeville. As the schedule indicates, this 14.22 mile Montfort-to-Dodgeville project will cost more than \$4,000,000. It will include the addition of five feet of paved shoulder.

As classified on the Iowa County Rural Functional Highway System map, STH 130 and STH 23 are Major Arterials. STH 191, CTH Q and YZ are classified as Major Collectors. CTH CH, B, Z and ZZ are classified as Minor Collectors. For more information, see Maps C.2, C.3, and C.4 and Tables C-2a and C-2b at the end of this Section.

LOCAL ECONOMIC DEVELOPMENT

Transportation is a factor in location decisions of commercial and industrial development. In locations where the development is included in local plans, communities should also assess their transportation infrastructure and determine what future improvements may be needed. Communication, during this planning process and when unforeseen development opportunities arise, should include WisDOT, adjacent governmental units, as well as interested parties and other stakeholders. The value of local plans is that they inform county, regional, and state plans and this coordination can help to identify the transportation facilities needed by future development.

The Town of Dodgeville's Plan Commission respondents were asked whether their existing local transportation system does a good job of meeting the needs of the jurisdiction's economic development goals related to

- Agriculture Yes
- Retail/Commerce Yes (would encourage use of state and county roads)
- Shipping Yes
- Manufacturing No
- Tourism Yes

ENVIRONMENT

Transportation and construction projects can impact the natural environment around a project area. When making short- and long-term transportation decisions, it is important to adequately address environmental implications on air quality and energy consumption; agricultural lands; and wetlands and wildlife. To minimize these effects, efforts to preserve the environment of a project area can include:

- Wetland mitigation (preservation, creation, enhancement and restoration)
- Prairie restoration
- Archeological work
- Hazardous waste management
- De-icing procedures and salt reduction
- Storm water management
- Noise monitoring and noise walls
- Nesting boxes
- Erosion control

One aspect of this is to manage stormwater run-off from transportation facilities. Additionally, transportation improvements and community development decisions should be coordinated and the impacts that each has on the other should be considered. For more information on this topic, see Appendix C-1 and Section E, Agricultural, Natural, and Cultural Resources Element.

AESTHETICS

The Town of Dodgeville's Plan Commission indicated that they would review Rustic Roads on a case-by-case basis. According to WisDOT, to qualify for the program, a Rustic Road:

- should have outstanding natural features along its borders such as rugged terrain, native vegetation, native wildlife, or include open areas with agricultural vistas which singly or in combination uniquely set this road apart from other roads;
- should be a lightly traveled local access road, one which serves the adjacent property owners and those wishing to travel by auto, bicycle, or hiking for purposes of recreational enjoyment of its rustic features;
- should be one not scheduled nor anticipated for major improvements which would change its rustic characteristics;

- should have, preferably, a minimum length of 2 miles and, where feasible, should provide a completed closure or loop, or connect to major highways at both ends of the route;
- a Rustic Road may be dirt, gravel or paved road. It may be one-way or two-way. It may also have bicycle or hiking paths adjacent to or incorporated in the roadway area;
- the maximum speed limit on a Rustic Road has been established by law at 45 mph. A speed limit as low as 25 mph may be established by the local governing authority.

Further resources on this topic are available and on file at the Town Office and as appendices in the Iowa County Comprehensive Plan.

TRANSIT, ACCESSIBILITY & SPECIAL NEEDS USERS

As noted elsewhere in this document, options in Iowa County are limited. The state operates a vanpool program, administered by the Wisconsin Department of Administration, which currently operates seven vans that stop in Iowa County. The closest pick-up point is in Dodgeville. According to the 2000 US Census, 10.6 percent of Town of Dodgeville residents carpool to work (72.5 percent drive alone and 13.2 percent work at home). Plan Commission respondents indicated support for creation of a Park-and-Ride facility, as did the City of Dodgeville. In rural areas, as the report *Rural Ridesharing* noted, “Because people usually live farther apart in rural areas, central meeting places are often designated for people to drive to and leave their cars to join ridesharing arrangements. These can be formal park-and-ride lots, such as those set up along major highways by State and local governments or, as more often is the case in rural areas, informal arrangements made by members of a car or vanpool who park in cleared areas near a mutually convenient road or intersection. Arrangements can also be made with local churches or shopping centers to use their parking lots during the day for free or for a minimal charge.” A “Park & Pool” facility—to support carpooling—in or near the City of Dodgeville merits further study. There is no long bus route transportation service available in Iowa County.

Although limited, transportation for the elderly and disabled is provided by the Iowa County Commission on Aging. WisDOT’s report *Transportation in Wisconsin: a Vision for the 21st Century* projects that by 2020 the number of state residents over 65 will increase by more than 50 percent. Wisconsin has funded a share of local transit operating costs since 1974. Today, state aid is the largest source of funding for Wisconsin’s 69 public transit systems—covering more than 40 percent of eligible operating costs. These transit operating aids topped \$251 million in the 2003-05 biennium. According to WisDOT, Wisconsin is ranked 7th nationally in the level of state support for transit operating costs. However, as the *Transit* section of this document indicates, the state’s aging rural population will be likely to require more transportation options. Plan Commission respondents indicated that they would like public input regarding the ability of the existing service to meet current needs. They support the continuation of service at the current level with periodic review. Plan Commission respondents also indicated support for development of a local taxi service.

The WisDOT/Bicycle Federation of America map of current Bicycling Conditions in Iowa County indicates County Roads and rates the conditions for bicycling. The WisDOT Planned State Highway Priority Corridors and Key Linkages map recommends further improvements to state and county roads. Part of the 40-mile Military Ridge State Trail runs through the Town of Dodgeville, along the former Chicago and North Western Railroad corridor. The limestone-surfaced trail is open to hikers, bicyclists, and wheelchair users in late spring, summer, and fall and snowmobilers and cross-country skiers in the winter. There are several observation platforms adjacent to the trail for viewing wetlands, wildlife, and other natural features. Bike Trails, in the Town of Dodgeville, were rated good or excellent by 55 percent of survey respondents. Of Town of Dodgeville survey respondents who expressed an opinion, 52 percent indicated that they agreed or strongly agreed that there should be more biking and walking lanes along public roadways. Plan Commission respondents indicated support for incorporating bike lanes with road improvements, as appropriate. [See Maps C.6 and C.7 at the end of this Section for more information.](#)

Several potential priority projects are indicated, including:

1. Work with City of Dodgeville and WisDOT to explore a Park-and-Ride lot.
2. Solicit input regarding paratransit services and ongoing review.
3. Interest in the development of a local taxi service.
4. Possible addition or identification of horse and recreation vehicle routes providing access to these areas.

LAND USE

The land use and transportation relationship is cyclical, beginning when population and economic growth create demand for land development. New development results in more vehicle trips and places greater demand on surrounding streets, roads, and highways. This is a complex interrelationship. As a WisDOT report acknowledges,

“WisDOT influences land development mostly through the provision of infrastructure. Some transportation-related regulations also may have an effect. For state transportation, the effects on surrounding land uses are often more unintentional than intentional ... the most significant role that transportation plays in land development is affecting access to land.”

Some land use trend indicators include:

- Past and projected population growth
- Employment trends by sector
- Residential housing permits housing prices over the last 5-10 years
- Population densities changes: persons/acre; households/acre; commercial persons/acre use (indicating rate of land consumption)
- Conversion of age-land to non-age-land uses and comparison with the land sale prices land remaining in age (indicating stability of age-uses)
- Participation in Farmland Preservation Program (indicating stability of age-uses)
- Septic system permits (indicating development in unsewered areas)
- Changes (or requests) to expand sewer service areas (indicating expansion of urban service areas)
- Commuting patterns (indicating the relationship between employment and residential land uses)

(From *Land Use in Environmental Documents: Indirect and Cumulative Effects Analysis for Project-Induced Land Development*. WisDOT, 1993)

Local government plans, in conjunction with a zoning ordinance, attempt to direct residential, commercial, industrial, and agricultural uses to the most appropriate part of the community. When coordination is lacking or inadequate, the outcome can cause congestion and increase the chance for crashes. Retrofitting transportation facilities for enhanced mobility and safety is difficult for local governments and WisDOT. Further resources on this topic are available and on file at the Town Office or as appendices in the Iowa County Comprehensive Plan.

But realistically, given the cyclical nature of the transportation-land use relationship, when transportation improvements alleviate congestion, the newly developed land may become even more accessible, resulting in higher land values and greater pressure to develop adjacent, undeveloped land. The cycle begins again with more intensive levels of development and greater transportation demands. These pressures are being felt in eastern Iowa County. Although some parts of the county are not seeing growth, they may anticipate continued spillover that will have an impact on local development and infrastructure within the 20-year planning window.

Coordination with local governments and WisDOT can serve to address future mobility needs by looking at the potential impacts of planned development. If plans indicate that increased capacity will be needed, it can be incorporated into the transportation plan for that area. If this communication occurs during the planning process, coordination can help to ensure that more options are considered. One of the tools that can help to assess alternatives is to conduct a traffic impact analysis, looking at possible scenarios.

Ideally, WisDOT is included in the local planning process and effective planning helps the community to realize its local goals for development, efficiency, and safety, while minimizing environmental impacts. This can save both money and time, over the long- and short-term. When developments are planned and sited with adequate transportation facilities, the community benefits. Land is developed more efficiently if proximity to other development and to transportation infrastructure. WisDOT (and the taxpayers) benefit because transportation investments continue to function throughout their projected life cycle and the public gets the best return on its tax investment.

The community can plan for areas of new business and housing development that will be served by a system of local roads or streets. Rather than wait for a developer proposal, the comprehensive planning process is an opportunity for the community to lay out a logical system of collectors and local roads in undeveloped areas with the jurisdiction’s boundaries. The community can potentially alter the plan to suit a particular development’s needs and still uphold an overall plan that ensures efficient and safe connectivity. If there are questions during the planning process about the access management implications of a proposed development, coordination with WisDOT early in the process can help minimize future conflicts. Further resources on this topic are available and on file at the Town Office and as appendices in the Iowa County Comprehensive Plan.

- ❖ Plan Commission respondents do anticipate growth pressures that will impact the transportation system in the future. They indicate that traffic delays occur at the Lehner Road and USH intersection, west of the City of Dodgeville. Their recommended improvements include adding turning lanes, merge lanes, and correcting visibility at the intersection. At USH and Survey Road, they recommend the addition of turning and merging lanes.

NOTE: As noted elsewhere in this document, improvements are scheduled for USH 18 in 2007. These will include the addition of a 5’ passing lane; the Lehner Road intersection is also slated for improvements.

- ❖ According to 2000 Census data, 27.1 percent of the township’s housing stock has been constructed between 1990 and March 2000. The town does have development guidelines, but respondents noted that they need to be reviewed and updated. More information was requested.

- ❖ In Section B, Housing Element, Plan Commission respondents indicated that housing development should be encouraged along major roadways. During the planning process, the township may want to coordinate with WisDOT so that site planning for housing, or other development, considers the safest access. Plan Commission respondents requested more information on WisDOT’s access management requirements related to the highway system (more information is also included in the next sections).

- 1) Review & Update local design guidelines
- 2) Coordination with WisDOT on planning for development

During the planning process, and beyond, the Town of Dodgeville is urged to coordinate with WisDOT so that designated sites for housing development, and the anticipated volume of traffic generated, will have safe access to the highway system via the local roads network.

ENHANCING & IMPROVING CONNECTIVITY

Access management attempts to minimize conflicts by coordinating land development access, while preserving the flow of traffic on the surrounding road system in terms of safety, capacity, and speed. The main function of access management is to establish a balance between the existing traffic flow and highway access. It is achieved through managing the design and location of driveways, median openings, and points of access to the state highway system. The level of highway access control is based on the importance of the highway to regional and statewide travel as determined through a functional classification system.

Although controversial in some jurisdictions, its primary goal is to ensure highway safety and to sustain the efficiency of the transportation system so costly retrofits don’t have to be made later.

EFFICIENCY & SAFETY

A 1980 report entitled *Access Control* explained the rationale for the state's access management regulations:

"The highly interdependent relationship that exists between land use and highways makes it necessary for the planning of each to be coordinated with the other. ... A property system must provide access to property and safe, efficient movement of traffic from one place to another. Both of these functions cannot easily be provided on the same street or highway. Vehicles entering or leaving the roadway slow traffic and cause congestion. Congested streets or highways handle less traffic than if traffic were moving freely. In addition, congestion imposes increased travel costs on users in the form of longer travel time and greater operating costs, higher accident rates, and loss of the public investment in the street or highway because its traffic carrying capacity is reduced. Access control can provide an effective and low cost means of abating the harmful effects of congestion. Five direct advantages are afforded by controlling access:

- *preservation of the capacity and integrity of the roadway;*
- *reduction of travel times;*
- *improved safety and driving conditions;*
- *economy of operation;*
- *and protection of the public investment in streets and highways.*

In contrast, relieving congestion by building new streets and highways [and bypasses] is becoming increasingly less desirable as it becomes more and more difficult to acquire the necessary rights-of-way and to find public funds to pay high construction costs. Continued new construction also consumes extensive amounts of land that may more profitably be put to other uses. ... Like it or not, none of us have an absolute unlimited right to use our land in any manner we please. We must take into consideration the impact that our use of land and land rights will have on others, both our immediate neighbors and the general public. Thus, if use of the right of access creates harmful interference with the public right to travel on a street or highway by increasing congestion and the likelihood of having an accident, the right of access may be regulated..."

Since 1980, when the quoted report was written, development pressures have only increased. Perhaps the reason that crash data has decreased is that jurisdictions have worked to ensure the safety of corridor routes is preserved.

Nonetheless, access management has been a contentious issue and some people believe that the regulations impede development. Efforts to repeal Administrative Rule 233 came to fruition in 2004. Doubtlessly, there are examples where the implementation of the regulation had been less than ideal.

However, congestion, caused by poor planning, and the resulting loss of the efficiency of a roadway may make development less attractive. On a human scale, the most important issue and the greatest responsibility is to ensure safety. For more information, see Maps C.8 (Access Management), C.9 (Setbacks), and C.10 (Iowa County Traffic Counts) and Tables C-3a and C-3b (Motor Vehicle Crash data for the Town of Dodgeville) at the end of this Section. Further resources on this topic are available and on file at the Town Office and as appendices in the Iowa County Comprehensive Plan.

MAINTENANCE & IMPROVEMENTS

Each year WisDOT completes 350 to 400 state highway projects, costing an average of \$1.5 million each. In addition, WisDOT returns more than \$500 million to local governments to help finance the operation and improvement of locally-owned roads, streets and bridges. According to WisDOT, highways and bridges face increasing pressures as more traffic and larger trucks cause more wear and tear. At this time, more than 30 percent of the state’s highway pavement and 10 percent of bridges are deemed to require rebuilding or replacement. WisDOT projects that even with proper maintenance, the average pavement life is approximately 40 years and the average life of a bridge is about 70 years. Almost the entire highway system and a significant number of bridges will need to be replaced by 2020. See Tables C.4 and C.5 and Maps C.11a and C.11b at the end of this Section for more information.

At the time that this plan is being written, local communities receive one-third of state transportation funds. Transportation aids to local communities include funds for local road construction and maintenance, bridge improvements, capital assistance for airports, rail and harbor facilities, flood damage, expressway policing, and transit operating assistance. General Transportation Aids (GTA) are distributed to every town, village, city, and county in the state to help offset the cost of maintaining and improving the local road and street system. This is the largest category of local aid. In the 2003-05 state budget, GTA funding totals \$747 million.

A WisDOT pilot program is underway to encourage local government officials and WisDOT district staff to jointly evaluate potential local projects before they apply to WisDOT for funding. The purpose of this effort is to improve program stability by providing accurate cost estimates and realistic delivery timelines for local highway and bridge projects at the outset, saving both local governments and WisDOT time and money in delivering local transportation projects.

According to the UW-Madison Transportation Information Center, by using the PASER system and Roadware software, municipalities can determine budget parameters, select possible projects, and evaluate the implications of maintenance decisions.

The Town of Dodgeville uses the state’s PASER (**PA**vement **SUR**face **EVA**luation & **R**ating) program requirements and reports: “PASER provides good information on the relative conditions of roads within the town. It takes some of the guesswork out of maintenance and can target those projects that need work the most. It is also useful information when explaining project priorities to the public.”

COST

For many local governments, maintenance of the local road system is the single largest expenditure category. Privatization is often touted, but to-date, only a small handful of Wisconsin cities and villages (less than 1 percent) have privatized street repair and maintenance. A more common municipal practice in Wisconsin is contracting with county highway departments for certain types of repairs and maintenance, ranging from complete contracting to cooperative projects. Not surprisingly, development can add new demands for services and increase local costs without providing comparable increase in revenues. Taken, in part, from UW-Extension *Fact Sheet #2: Comparison of Service Production Methods and the Incidence of Privatization.*)

In both 2003 and 2004, the Town of Dodgeville was budgeted to receive \$130,049.50 in General Transportation Aids and Connecting Highway Aids. For more information, see Table C-6 at the end of this Section and Transportation appendices for the Iowa County Comprehensive Plan’s Section C.

<p>Reconstruction</p> <ul style="list-style-type: none"> ▪ Completely rebuilds road ▪ Flattens curves and hills ▪ Widens pavement and shoulders ▪ Improves safety and rideability ▪ May require some land acquisition <p>Reconditioning</p> <ul style="list-style-type: none"> ▪ Involves reconditioning plus resurfacing ▪ Retains existing pavement core ▪ Improves roadside-shoulder widening and ditch restoration ▪ Improves isolated deficient curves, hill crests, intersections <p>Resurfacing</p> <ul style="list-style-type: none"> ▪ Includes new pavement and gravel shoulders (includes base patching) ▪ May include intersections paving ▪ Places beam guards where needed ▪ Highway needing improvement: ▪ Maintains specific areas of potholes, extensive cracking, uneven pavement, low shoulders and rutting <p style="text-align: right;">—WisDOT</p>

In 2002-2003 the Town of Dodgeville was one of the few Iowa County municipalities to apply for and receive Local Road Improvement Program (LRIP) funds. Under the Town Road Improvement Program (TRIP), they received \$20,562.17 towards road reconstruction projects costs of \$41,124.35. Information on Iowa County recipients of LRIP funds is included in Table C-7 at the end of this Section. Further resources on this topic are available and on file at the Town Office and as appendices in the Iowa County Comprehensive Plan.

The Town of Dodgeville utilizes a 5-year road plan, which it submits to the county for the LRIP program.

Capital Improvement Program

Many municipalities use a Capital Improvement Program (CIP) to assist in planning for major project costs. A CIP is a multi-year scheduling of physical public improvements, based on the examination of available fiscal resources, as well as the prioritization of specific public improvements, to be constructed for a period of five to six years into the future. Capital improvements are those that include new or expanded physical facilities that are relatively large in size, expensive, and permanent. Street improvements, public libraries, water and sewer lines, and park and recreation facilities are common examples of capital improvements. Further information is available in the Transportation appendices of the Iowa County Comprehensive Plan's Section C.
