MIDCONTINENT GRID SOLUTIONS

BECI Project Schedule Update

Hello,

Thank you to everyone who has taken the time to attend a meeting, review project information, submit comments, or speak with our team. We recognize that many landowners, local officials and community members have invested significant time in this process, and that many still have questions about the project.

Based on feedback we've received, we are extending the public engagement schedule before filing our application with the Public Service Commission of Wisconsin. This additional time will allow for another round of public open houses in early 2027 and provide more opportunities for landowners, local officials, stakeholders and community members to review information, ask questions and share feedback. As part of the revised schedule, we anticipate filing our Certificate of Public Convenience and Necessity (CPCN) application no sooner than May 1, 2027. Additional details about open house dates and locations will be shared after the first of the year.

The BECI project prevents electrical overloads that could occur as soon as 2034, strengthens Wisconsin’s power grid and enhances the ability of the region's retail utilities to deliver electricity generated from diverse energy

schedule, we anticipate filing our Certificate of Public Convenience and Necessity (CPCN) application no sooner than May 1, 2027. Additional details about open house dates and locations will be shared after the first of the year.

The BECI project prevents electrical overloads that could occur as soon as 2034, strengthens Wisconsin's power grid and enhances the ability of the region's retail utilities to deliver electricity generated from diverse energy resources across the Upper Midwest to homes, businesses and communities throughout the state as some of the state's oldest power plants are anticipated to be retired.

No final route has been selected. To learn more about the project and provide feedback, please visit mgs-projects.com/BECI.

"We appreciate everyone who has participated in this process and shared feedback," said Ryan Houk, president of Midcontinent Grid Solutions. "We've heard from landowners, local officials and community members who want more time to review project information, ask questions and provide input. We're listening. By extending the engagement schedule and rescheduling our open houses from the fall to early next year, we're creating more opportunities for meaningful participation before the next step in the regulatory process."

Sincerely,
The BECI Project Team
