Click here to open USEPA 2022 Guidance for Developing and Maintaining a Service Line Inventory

Note: Field names that are shaded **navy** are <u>required</u> for every service connection. Field names shaded <u>blue</u> are <u>recommended, optional, or only required under certain conditions</u>. See field descriptions for more information.

	Column			Description				
Α	SITE ID	•		department in column B can use this column to "link" their materials inventory table to a separate service address vever, it strongly recommended that PWS enter the site ID for locations that are lead and copper monitoring				
В	LOCATION IDENTIFIER	The location identifier can be the site address, however if there is more than one service connection at a given address, it must include additional detail. If the PWS does not wish to report addresses to the department it can be a block, intersection or landmark. This column is required per sub-subparagraph §141.84 (a)(8)(i) of the LCRR which requires that a location identifier be associated with each service line.						
	Column	Description	Answer	Answer Option Descriptions				
		Is there a gooseneck, lead	options

	WAS STREET SIDE SERVICE LINE	Was the service line ever	Y	YES – SERVICE LINE WAS PREVIOUSLY LEAD				
Ε	MATERIAL EVER PREVIOUSLY	previously lead?	N	NO – KNOWS WITH CERTAINTY THAT SERVICE LINE MATERIAL WAS NEVER PREVIOUSLY LEAD				
	LEAD?	·	UNK	NOT KNOWN WITH CERTAINTY IF MATERIAL WAS EVER PREVIOUSLY LEAD				
	Column			Description				
F	STREET SIDE SERVICE LINE SIZE	Service line pipe diameter in inches, from the water main to curb stop. This information is useful as a screening tool as <u>most</u> lead service lines are 2 inches or less in diameter. Furthermore, PWSs are required to report service line size to the PSC for their annual report. This column may also be used by PWS that wish to track information required by both agencies in a single document. <i>Column F is optional</i> .						
G	STREET SIDE SERVICE LINE INSTALL DATE	The four-digit year that the utility-side service was installed (i.e. 1974). If the exact year is not known, enter the decade (i.e. enter 1970 for any year in the 1970s) Althought this information is not required, it can be used as a screening tool to determine if the service line was installed before or after the lead ban (1986). Column G is optional.						
Н	CURRENT PROPERTY SIDE SERVICE LINE MATERIAL	Service line pipe material, from the curb stop to water meter. See Row D for answer options.						
I	PROPERTY SIDE SERVICE LINE SIZE ¹		uired to report	top to water meter. This information is useful as a screening tool as most lead service lines are 2 inches or less in service line size to the PSC for their annual report. This column may also be used by PWS that wish to track cument. Column I is optional.				
J	PROPERTY SIDE SERVICE LINE	If the exact year is not known, enter service line was installed before or a	-	enter 1970 for any year in in the 1970s). This information it can be used as a screening tool to determine if the

Building Type (Column K)

Current street side service line material (Column D)

Was street side service line ever previously lead? (Column E)

Street side service line size (Column F)

Street side service line install date (Column G)

Present? (Column L)

Property side service line material (Column H)

Gooseneck, pigtail or lead connector Property side service line size (Column I)

Property side service line install date (Column J)

1. Why do Public Water Systems (PWSs) need to provide this information?

Under Section §141.84 of the Lead and Copper Rule Revision (LCRR), all community Public Water Systems (PWS) "must develop an inventory to identify the materials of service lines connected to the public water distribution system. The inventory must include all service lines connected to the public water distribution system regardless of ownership status."

2. What specifically does the LCRR materials inventory require (columns D, E and H)?

Subparagraph §141.84 (a) (4) of the LCRR states that "each service line, or portion of the service line where ownership is split, must be categorized" as belonging to one of the following groups: lead; non-lead; lead status unknown; or galvanized requiring replacement. The information provided in columns D, E and H of the materials spreadsheet will enable the department to correctly assign every service line or portion thereof to one of these four categories.

3. What is the Site ID (column A)? Is this required?

The PWS can use this column to identify the site ID of lead and copper monitoring sites. For all other locations, the site ID is optional. PWSs that do not wish to report site addresses to the department in column B may want to use this column to "link" their materials inventory table to a separate service address table for their own use.

4. What is a locational identifier (column B)?

Sub-subparagraph §141.84 (a)(8)(i) of the LCRR requires a location identifier associated with each service line. The locational identifier can be the site address, or it can be a block, intersection or landmark.

The LCRR defines some categories of materials, such as 'lead status' and 'galvanized downstream of lead' differently in different sections of the rule. Thus, the spreadsheet is intended to be a simple and easy way for municipal PWSs to collect and report the information required now and in the future. The DNR will use the materials inventory data collected by the water system to categorize each of their service connections appropriately under each section of the LCRR.

5. Why do PWSs need to indicate whether a gooseneck is present (column C)?

Paragraph §141.86 (a) of the LCRR directs every public water system to "identify a pool of targeted sampling sites based on the service line inventory." However, the materials information needed to categorize service lines in accordance with §141.84 alone is insufficient to identify these targeted sampling sites. Specifically, as per LCRR subparagraph §141.86 (a) (5), Tier 3 sampling sites include both single-family structures served by galvanized lines located downstream of a lead service line (i.e. <u>confirmed</u> galvanized requiring replacement) or downstream of a lead gooseneck, pigtail or connector.

5. Why do PWSs need to indicate whether a service line that is not currently lead was ever previously lead (column E)?

The materials history of the upstream utility service line is needed to correctly categorize customer-side galvanized service lines as either non-lead or galvanized requiring replacement under the LCRR. Sub-subparagraph §141.84 (a)(4)(ii) of the LCRR requires that public water systems identify locations where a galvanized service line "is or was at any time downstream of a lead service line" or "lead status unknown" service line as "galvanized requiring replacement". If a water system knows with certainty that the utility side of a service line is not now, and never has previously been lead, then the downstream customer-side galvanized service line is identified as "non-lead". If a PWS does not know this with certainty, the material is categorized as "galvanized requiring replacement." However, as per paragraph §141.86 (a), galvanized service lines currently or formerly downstream of a lead gooseneck, pigtail, or connector are *not* identified as galvanized requiring replacement.

5. Are PWSs required to track the interior premise plumbing materials and install date at every service location in their system (columns M, N and O)?

This information is only required for service locations that are potential compliance sampling sites. If the PWS has at least as many Tier 1, Tier 2 and/or Tier 3 sampling sites as their required number of monitoring sites, then they are not required to track this information at this time. However, the PWS will be required to collect this information in the future, once all of their lead service lines and galvanized lines requiring replacement are removed. It is recommended that PWS collect this information on an ongoing basis whenever they are inside structures, as part of their normal operations.

5. Are PWSs required to track whether there is a point-of-entry (POE) or point-of-use (POU) treatment device at every service location (column L)?

This information is only required for service connections that are potential monitoring sites. Sub-paragraph §141.86 (1) of the LCRR states that "Sampling sites may not include sites with installed point-of-entry (POE) treatment devices and taps used at sampling sites may not have point-of-use (POU) devices designed to remove inorganic contaminants..." However, the department recommends that PWSs collect this information concurrently with premise plumbing materials at a given residence, so that PWSs don"t need to revisit residences that become potential monitoring sites once their lead and galvanized lines are removed.

5. Are PWSs required to use the DNR template?

No, PWSs are <u>not</u> required to use the DNR template for their materials inventory. However, PWSs that track their drinking water distribution system materials using a different method should provide all of the information requested in the template.

5. Do Municipal PWSs have to report this information to the DNR and PSC both?

Due to differences in the frequency and timing of reporting and the type of information reported, municipal public water systems will continue to report service line information annually to the Public Service Commission (W-22 and W-29) for the foreseeable future. However, the DNR and PSC are in discussions about how they can collaborate to minimize the amount of similar reporting to multiple agencies after the LCRR compliance date.
