

At Xcel Energy, we are committed to provide safe, reliable service to our customers. This notice is to inform the public of a rebuild project that affects properties located off of County Highway X in Lafayette township.

Currently, Xcel Energy provides distribution service to the local community via the Wissota Beach Substation in a three-phase configuration, which is loaded to full capacity. The current feeder line has reached its end of life in age and condition and is scheduled for rebuild.

Xcel is planning to rebuild the feeder line to a double circuit three-phase configuration, relocating the source of power to the new Bateman Substation and will be retiring the current Wissota Beach Substation. The advantages of this is our customers will now be closer to the power source rather than the tail end with new 45 foot poles with upgraded conductors improving overall system reliability. This project will be mostly in road ROW, however the crossarms and cable will overhang on to private property. Xcel will be acquiring easements for land rights and vegetation maintenance.
