Hello,

I have received a Notice regarding a Odor Mitigation Station to be installed at the Heron Park. I have a few questions, I live very close to that small park.

1. Where would the Mitigation Station be built on the park property? Why this park?
2. There is a covered eating patio and a children's playground equipment already on the property, will this structure be fenced off or enclosed for safety purposes?
3. How often will the equipment be maintained?
4. In some research it states that these structures / stations omit or release a fowl odor (rotten egg) will this be one of those? If so, how will the city keep the air clean of any odors?
5. Why is the City of Boise not building this station on the North side of the river???
Not in Garden City.
6. Alternate site, ACHD right next door off the park?

Thank you,

Julie Thomas
