

# IoH NO FEE PERMIT

## Applying for a No Fee Permit

**Step 1:** Check the weight and length limits on the IoH and Ag CMV pages. Also check the weight table for specific gross vehicle weight limits.

- If you are over the weight and/or length limits and traveling on state roads, you will need to submit a permit application to the state. Proceed to Step 2.
- If you are over the weight and/or length limits and traveling on local (village, town, city, county) roads, check [Resolutions and ordinances web page](#) to determine if a permit is needed to operate on the local roads you've identified. Once you have determined that you need a permit from a local Maintaining Authority, proceed to Step 2.
- NOTE: You may need permits from both state and local maintaining authorities.

**Step 2:** Access the "No Fee Permit Application for All Self Propelled, Towed or Attached Implements and Agricultural Commercial Motor Vehicles" (MV2578). Open the Sample Permit Application for reference.

**Step 3:** Complete Application.

**Part A:** Identifies the applicant/operator and the routes the operator will run.

The application asks you to describe your routes of operation. Routes can either be written out or a map can be attached with the roads clearly marked for the beginning and ends points for each. If you are unsure of your routes, it is best to indicate all roads that you anticipate traveling on.

**If you are applying for a permit to operate on a state road:** Your beginning and endpoints should be indicated in relation to the nearest state or county highway intersection (for example: state on WI-82 from CTHX, going north to Sunset Road); OR provide a map that clearly identifies each segment of state highway from the intersection with a state or county highway nearest your beginning and end points for which you are seeking a permit.

**If you are applying for a permit to operate on a local road:** Please list each segment of county, town or local road including letter or name with beginning and end points for which you are seeking a permit; OR provide a map that clearly identifies each segment of county, town or local road with the beginning and end points clearly marked.

**Part B:** Asks the applicant to do the following:

- Identify permit type needed (vehicles exceed weight or length limits),
- Provide details of vehicle information (make, model and number, number of axels, etc.),
- Provide details of vehicles length and weight measurements (including gross weight, weight per axle and axle measurements).
- Provide trip frequency and use information.

**Part C:** (form MV2578C) This form is used only for permit applications going to local authorities. Include a blank copy of this form when submitting Application Parts A and B to those authorities.

For equipment information on a specific vehicle, please call your local equipment dealer. Wisconsin law requires dealers to disclose unladen weights at time and point of sale.

**Step 4:** Submit completed application to proper authority. If submitting to a local maintaining authority, please include a copy of MV2578c. The maintaining authority shall respond with its decision within 3 weeks of receipt of a completed application. Once approved, permits must be carried in authorized vehicle in electronic or paper format.
