

**April 2025**

## **Thomson Township, MN – Randall Avenue Sewer Extension**

Construction for the sewer extension along Randall Avenue is set to begin early summer. The locations of activities associated with this project are shown on the attached map and the work to be completed consists of installing sanitary sewer and then repaving Randall Avenue. The project is scheduled to take place from summer to fall of 2025, with the final lift of pavement and cleanup into the fall of 2025. The following is a summary of the preliminary project schedule:

**June 2025:** Start of Construction

**September 2025:** Substantial Completion

**October 2025:** Final Completion

During construction, there will be some additional heavy truck and equipment traffic coming through town. It will be necessary to close streets partially or completely to vehicular traffic for your safety. Street parking may also be restricted at some times and in certain areas.

There are no utility disruptions anticipated with this project.

The Township, Contractors, and Bollig Engineering ask that everyone stay clear of construction zones, obey construction signs, and be safe and cautious around construction equipment. If you have questions or concerns about the project, please contact Will O'Halloran, on-site Resident Project Representative (RPR) or Nathan Feist, Project Engineer at 218.595.7940.
