

Motley - General Regulations

(a) Control measures prescribed for abating Dutch Elm Disease are:

1. *Use of fungicide.* Fungicides may be effective in preventing Dutch elm disease when injected into living trees that do not already show symptoms of Dutch elm disease. Fungicide injections on private lands are optional and, if performed, are at the landowner's expense; and

2. *Removal and disposal of trees.* Prompt removal of diseased trees or branches reduces breeding sites for elm bark beetles and eliminates the source of Dutch elm disease fungus. Trees that wilt before July 15 must be removed within 20 days of detection [alternative: 30 days]. Trees that wilt after July 15 must be removed by April 1 of the following year. Diseased trees not promptly removed will be removed by the city at the landowner's expense. Wood may be retained for use as firewood or sawlogs if it is de-barked or covered from April 15 to October 15 with 4 mil plastic. The edges of the cover must be buried or sealed to the ground.

(b) *Definition of control areas.* The **CONTROL AREA** for Dutch Elm Disease is defined as all lands within the boundaries of the city.
